Todays Paper of

BT732
Short and Long Questions
-Largest known regulatory sequence of Yeast 2
- 2 Types of Operon 2
-Design of Si RNA 2
- Two strategies to sequence human Genome 3
- Difference between Genetics and Genomics 3
-Yeast Genome Charachteristics 5
- Advantages and disadvantages of Microarray 5
- X chromosomes Silencing 10
- DNA sequence and its applications- 10
MCQS
Genetic can be studied bt----------
Gametes unite during……..
Every trait controlled by……
Human CpG …….
Lod score > 3……..
Modern human arose from ……..
Micro RNA……
sRNA……
Human total genome……..
Karyotype……
By
Afzal Sultan

Kindly share ansawers of these objectives

sign of bright future

BT732, Genetics and genomics
My Today's Final Paper

1. What is design of siRNA? 2 Marks
2. What are two strategies used in human genome mapping? 2 Marks
3. What are gene families and gene clusters? 3 marks
4. What are the largest known regulatory sequences in yeast genome? 2 Marks
5. Write 5 applications of molecular markers? 5 Marks
6. Write characteristics of yeast genome? 5 Marks
7. What is genome mapping? Explain different types of genome mapping? 10 marks
8. What are molecular markers? Write a detail note on RFLP? 10 marks

If you need any other queries If you need any other queries, then freely to ask us
