Created by VU Bio Mates Team

BT734

1. Write buffers and solutions for single RNA extraction. 2
2. What is role of Glyxal in Glyxolate extraction of RNA? 2
3. Write steps for the gel electrophoresis of RNA. 5
4. What is Northern hybridization? Explain procedure of Northern hybridization. 10
5. Explain single step process of simultaneous extraction of DNA, RNA and protein. 10
6. What are the benefits of Random primed in hybridization? 3
7. Write reagents for Formaldehyde RNA extraction? 3

(1) Give two brand names for monophasic lysis reagent. (2) function of bromophenol blue in electrophoresis (3) structural features of SiRNA. (4) function of ethanol, Isopropanol, liquid nitrogen (5) Difference b/w finite cell line and continuous cell line. (6) Procedure of Gel electrophoresis of Glyoxylate RNA. (7) Principal of DNA microarray + 4 types (8) simultaneous preparation of DNA, RNA and Protein. (9) Procedure of microarray. (10) CY3 dy colour (11) CY5 dye colour

(1) Record keeping, important to avoid — (2) one mole 6.022×10^{23}. (3) Temper for E.coli — (4) The basic nutrients in — media provided by plants and animals (5) Peptone in YEPD 2% (6) expected DNA in minipreparation is — (7) — UM conc. of dNTP recommended in PCR 1.5 mM $MgCl_2$ (8) Annealing temp. — than melting temperature (9) Alkaline transfer buffer for alkaline DNA — (10) low melting temp. agarose can be held as liquid at — °c (11) Which reagent generate organic phase during isolation of DNA, RNA and protein. (12) Resin in column chromatography of Poly A — (13) RNA should be stored at -80°c in — (14) Glyoxylate RNA staining is done — (15) Formaldehyde oxidizes to — (16) Drawback of Biuret assay is — (17) Bovine serum albumin is used in — (18) In SDS-PAGE, separation of protein is based on — (19) Westing Blotting for the detection —

(20) If The detection antibody is conjugated to an enzyme, then the assay is called _____.
