CS101 MOST IMPORTANT MCQ

Statement	Answer	Ref
1. Which of the following is a disadvantage of a linear search?	Greater time complexities compared to other searching algorithms	
2. The node or pc which sends requests for services is called	Client	
3. For sequential search algorithm technique, it is to be list as sorted in alphabetic order in case of names list	Mandatory	
4. Which protocol is suitable for wireless star networks?	CSMA/CA	
5. In main memory each cell has unique name called as	Address	
6. Keyword is used in python language to define a function.	Def	
7. Udp is a protocol used for communication: the full form of udp is	User defined protocol	
8. The instruction code to halt machine cycle is	C000	
9. 0011.0010 =	0101	
10. In computer. Gui stands for	Graphical user interface	
11. Bit is:	Basic unit of storage	
12. A program under is called process	Execution	
13. Avoid searching the following upon the internet	Pressure cooker bomb story	
14. Can store unique pattern of 21 bits	Unicode	
15. An instruction is fetched in the instruction register from main memory	Five	
16. An instruction is fetched in the instruction register from main memory	By using bus	
17. 114 can be represented by as a fractional binary number.	0.01	
18. What is the ascii code for alphabet a	65	
19. Which of the following terms refers to the process in which a small request is initially made and detailed solution is shared later	Foot-in-the-door technique	
20. For a network to function reliably, it is important to establish rules by which activities are conducted. Such rules are called	Protocols	
21. For sequential search algorithm technique, it is to be list as sorted in alphabetic order in case of names list	Mandatory	
22. 0011.0010 =	0101	
23. Each on-demand stream is effectively_____from a media	Unicast	

For Help 0331-6214835

server that stores the content to the end user that wishes to r		
24. Pseudo code is language	Independent	
25. Non-terminating expansions may also be a source of	Truncation error	
26. Which tier of isp is the backbone of internet?	Tier-1 isps	
27. The originator of a message can encrypt the message using the	Public key	
28. The process of using dns to perform an address translation is called a	Dns lookup	
29. Refers to distributed systems that are more loosely coupled than clusters but that still work together to accomplish	Grid computing	
30. What will be the output of following boolean expression? 1010 or 1111	1111	
31. An interrupt converts the cpu to privileged mode and transfers control to within the operating system.	Interrupt handler	
32. For sequential search algorithm technique, it is _____to be list as sorted in alphabetic order in case of names list-	Mandatory	
33. If you want to search within the range of number, you can use_____in the search query.	Two dots	
34. Which of these describes stepwise refinement?	It is top down approach	
35. Let a list fred. Alex. Diana ,byron .carol after sorted first sublist our list would be	Alex. Fred. Diana, byron. Carol	
36. You might search the followings or similar thing and might get unpleasant results which might depress you.	Skin condition	
37. A client wants to execute some scripts at the server end and server starts executing the script blindly, this may cause:	Ethical concerns on the client side and security concerns on the server side	
38. A. Company can develop for which it chooses to maintain ownership rights.	Proprietary systems	
39. Udp is a protocol used for communication: the full form of ljdp is	User datagram protocol	
40. What would be the output when we apply not operation on input 1.	0	
41. Computer fraud and abuse act passed is	1984	
42. Which software is used to perform tasks particular related to the machines utilization?	Application software	
43. The term used for removing process form process table is called ____ process	Killing	
44. The tcp/ip protocol suite is a collection of	Several protocol standards used by the internet	
45. When applied to a list with n entries, the binary search algorithm will interrogate an average of____entire	Log2n	

For Help 0331-6214835

46. One bit can contain only _____ value.	One	
47. Voip consists of two processes on different machines transferring audio data via the _____ model	P2p	
48. Current status of the activity associated with the process is called the	Process state	
49. While sending a message it is the layer's responsibility to provide an address that is compatible with the internet	Application	
50. Is the smallest negative number represented by using 16-bit 2S complement notation.	-32768	
51. The computers of the _____ were not very flexible or efficient	1940S and 1950S	
52. In binary search, first of all value check at a point	Middle	
53. A private key is used to ____ messages.	Decrypt	
54. Each router maintains a _____that contains the routers knowledge about the direction in which messages should	Forwarding table	
55. We can use ____ boolean operators specially to find relevant pages.	And or	
56. Connects computer over a large geographical area or world	Wan	
57. Is a type of malware that can replicate itself into other computers connected to a network?	Worms	
58. Which program do you use to create a spreadsheet?	Ms excel	
59. **How many steps does a machine cycle generally have?** **60.**	**Three**	
61. **Computer science approaches some problems by establishing a well-defined set of building blocks from which algorithm report**	**Primitive**	
62. Operator will give us only those web pages in which the searched term appears in the title of the web pages.	In title	
63. You can search images even by giving a query of another image using Google Image	Link	
64. FIFO is abbreviation of?	First in first out	
65. Web pages which contains the mentioned query in the (JRL of the web pages	ALL	
66. Which of the following is not true about pseudo code?	Pseudo code is an ambiguous representation	
67. World Wide Web was adopted as a standard approach	It got widely popular after	

For Help 0331-6214835

for linking documents over the Internet because:	incorporating support for multimedia content	
68. Word processor like Microsoft Word is an application that	Build editable word document	
69. If 15 is divided by 5 using repetitive subtraction, how many steps it involves?	3	
70. Is a mthnare which gathers data about your activities on the system and forwards it to the outside party with,	Virus	
71. Which of the following is the correct sequence of network layers for the flow of message at the sender side?	Application layer to Transport layer to Network layer to Link layer	
72. World Wide Web was adopted as a standard approach for linking documents over the Internet because:	It got widely popular after incorporating support for multimedia content	
73. The connection between networks to form an internet is handled by devices known as	File type	
74. The connection between networks to form an internet is handled by devices known as	Router	
75. Can store unique pattern of 21 bits.	Unicode	
76. ENIAC stands for	Electronic numerical integrator and calculator	
77. Once an intruder or perhaps an authorized user with malicious intent) gains access to a computer system, the next step is	Destructive software	
78. The control of a loop consists of the_____activities.	Two	
79. Keyword is used in python language to define a function.	Def	
80. 1 kilobyte (kb) contains bytes	1024 Bytes	
81. Using we can find the trend of the stock market for a company	Stocks Operator	
82. 14 can be represented by as a fractional binary number.	0.01	
83. An instruction register holds the machine instruction	Being executed now	
84. Is used for encoding consecutive frames of a motion picture	Relative encoding	
85. The TCP/IP protocol suite is a collection of:	HTTP, TCPJIJDP. IP and Link layer protocols	

For Help 0331-6214835

86. Releasing space in the_____can breaking the deadlock and allowing the remaining processes to continue their tasks	Process table	
87. In main memory each cell has unique name called as	Address	
88. Diameter of COMPACT DISK is	12 centimeters	
89. Operator will give us only those web pages in which the searched term appears in the title of the web pages.	Intitle	
90. Query is the set of words given to the search engine for	Searching	
91. Computer does not understand any language except	Binary language	
92. LAN stands for	Local area network	
93. Google does not distinguish the capital letters or small letters.	This is called case-insensitive	
94. Which of the following is a significant asset to a computers performance?	Direct Memory Access (DMA)	
95. Each sound have a	Wave	
96. The set of tasks that ensures the software is correctly implements a specific function is known as	Validation	
97. The application layer uses the_____ to send and receive messages over the Internet.	Transport layer	
98. Pseudo code is language	Algorithm	
99. Which of the following language is used for client side scripting?	Javascript	
100. Which one is the best solution that no one can take your data from your computer?	Using Password	
101. If the bit sequence 1001 0110 is subjected to a circular shift of one bit position to the left would generate:	0010 1101	
102. Google Drive is an example of	Cloud Computing	
103. By using MPEG and MP3 compression techniques, video cameras are able to record video within	128 MB of storage	
104. You are interested to search a query for a specific file type, you can include such in the query.	File type	
105. A process is called to be in state if it can continue its progress	Ready	
106. If we have a decimal number 431. Then 4 will be considered as hundred. 3 a _____and 1 as unit.	Tens	

For Help 0331-6214835

107. You can search a phrase when even you do not know word would be there at a particular		
108. For Sequential Search Algorithm technique. It isto be list as sorted in alphabetic order in case of names list	Mandatory	
109. Which of the following feature was incorporated in the early version of Word Wide Web?	Storing the documents in an unstructured way	
110. Each on-demand stream is effectively_____ from a media server that stores the content to the end user that wishes to	Unicast	
111. You can search a phrase when even you do not know word would be there at a particular	Location	
112. Which of the following is true about TCP in comparison to UDP	More reliable but less efficient	
113. A process is called to be in ____ state if it can continue its progress	Ready	
114. Internet is a collection of networks constructed by	Internet Service Provider	
115. Which of the following protocol helps to store the email messages on a local machine while retrieving email messages from	POP3	
116. Computer science has many _____ in almost every field of the real world.	Application	
117. By starting the CPU first of all enters in ____ mode **118.** In binary Addition 1+0 is =	Privilege 1	
119. Encoding is used to store colorful images.	RGB	
120. CD stands for	Compact disk (CD)	
121. The_____ resides on a computer containing hypertext documents to be accessed	Webserver	
122. What does HTTP stands for	Hyper Text Transfer Protocol	
123. In 2-bit binary addition, how many possibilities are there	4	
124. What is the full form of PHP?	Personal Home Page	
125. The node or PC which sends requests for services is called	Client	
126. Is used for encoding consecutive frames of a motion picture	Relative encoding	
127. In fractional binary numbers, digits placed after the radix point represent	Fractional part	

For Help 0331-6214835

128. RAM stands for:	Random access memory	
129. You can use _____search engine for searching images, movies, games or educational content.	Google	
130. Using_____ form eliminates the possibility of multiple representations for the same value.	Normalized	
131. Loop is executed in a repetitive fashion under the direction of some	Control process	
132. Which program do you use to create a spreadsheet?	MS Excel	
133. Each time a process finishes task the operating system either allocates the recourse to a waiting process or, if no process is	Clear	
134. TIFF is an acronym of	Tagged Image File Format	
135. A program logic written in an ordinary language illustrating a structure similar to computer instructions is known as.....	Pseudo codes	
136. If a process is allowed to access memory cells outside its allotted area, it can____data being used by other process	Read and alter	
137. Computer science has many _____ in almost every field of the real world.	Applications	
138. Which of the following is the correct sequence of network layers for the flow of message at the sender side?	Application layer to Transport layer to Network layer to Link layer	
139. If 15 is divided by 5 using repetitive subtrac6on, how many steps it involves?	3	
140. Scheduler maintains a block of information of all processes in main memory in _____ table	Process	
141. Which of the following is not malware?	Antivirus	
142. Decentralized approach for running various operations leads to efficiency in ___ model	Peer 2 Peer	
143. BOINC is abbreviated for	Berkeley's Open Infrastructure for Network Computing	
144. The process of using DNS to perform an address translation is called a	DNS lookup	
145. Multi-programming is a way to implement?	Time sharing	
146. 114 can be represented by as a fractional binary number.	0.01	

For Help 0331-6214835

147. The ___ resides on a computer containing hypertext documents to be accessed.	Client	
148. The Pseudo code can have the equivalent ____ assignment structure.	Python	
149. One term could be used for more than one thing. For example word 'Jaguar is used in two meanings such as:	Animal and car	
150. Breaking the tasks into a number of subtasks compatible with the number of available processors is called	Scaling	
151. What is the full form of ASP?	Active Server Pages	
152. The connection between networks to form an Internet is handled by devices known as	Router	
153. Computer hardware is the collection of	Physical parts of a computer system	
154. Main memory is also called	Ram	
155. Hexadecimal notation uses a _____ symbol to represent a pattern of four bits.	Single	
156. What will be the output of following Boolean expression 1010 OR 1111	1111	
157. The set of tasks that ensures the software is correctly implements a specific function is known as	Verification	
158. An instruction register holds the machine instruction, which is	Being executed now	
159. The value of the flag must be retrieved from main memory, manipulated within the ___ and finally stored back in memor.	CPU	
160. Starting with vocabulary words and then giving students a reading passage is an example of	A bottom-up approach	
161. CPU and RAM are connected with to communicate with each other	BUS	
162. Instant messaging in which people carry on a written conversation over the Internet, is an example of which model?	Peer-to- peer	
163. Processor is based on CISC architecture	Intel	
164. Before the Stored Program concept, data was stored in memory while programs were a part of	CPU	
165. HDTV is an acronym of	High definition television	

For Help 0331-6214835

166. In main memory each cell has unique name called as	Address	
167. Fetch an instruction. Decode the instruction and Execute the instruction are parts of	Machine cycle	
168. JPEG is mostly used in	Photography industry	
169. Which operation can be used to invert all of the bits of an RGB bitmap image?	XOR	
170. On Social media, sometimes, a particular_____ is very popular.	Hash tag	
171. Tag is used to write paragraph in HTML document	<xmp>cp> text </p>clxmp>	
172. OSI stands for:	Open System Interconnection	
173. Time required to move the readiv;rite heads from one track to another is called as	Seek time	
174. Ethernet based network for Bus topology makes use of _____ for transmitting messages	CSMA/CD	
175. Word processor like Microsoft Word is an application that	Build editable word documents.	
176. Which software is used to perform tasks particular related to the Machines utilization?	Application software	
177. Boolean operation produces the output as 1 when both inputs are 1.	AND	
178. Is used to detect and remove the presence of known viruses and other infections.	Antivirus	
179. Using _____ form eliminates the possibility of multiple representations for the same value.	Normalized	
180. ENIAC stands for.	Electronic numerical integrator and calculator	
181. When a packet reaches at the intermediate stop, the network layer	Forwards it to the Link layer after determining the direction of the next hope	
182. A PAN is normally used for short range communications typically	Less than a few meters	
183. In hexadecimal notation _____ bits represent as single symbol.	Four	
184. The _____ in the state of the process must be sufficient to determine uniquely and completely the actions required by each ste	Information	
185. Cloud computing services provide reasonable	Scalability. Reliability	

For Help 0331-6214835

guarantees of		
186. Truncation Error is a problem that occurs in	Floating point notation	
187. To construct reliable operating systems, we must develop _____ that cover every possible contingency, regardless of how mir	Algorithms	
188. All bit patterns. Which represent positive numbers in excess notation start with	1	
189. Which of the following is the correct sequence of network layers for the flow of message at the sender side?	Application layer to Transport layer to Network layer to Link layer	
190. in binary system, we can use only _or _at each position.	0.1	
191. You can use____ search engine for searching images. movies, games or educational content.	Google	
192. in CS. we store and link data in an organized way using	DBMs	
193. TLD Stands for	Top Level Domain	
194. Transciusions is feature related to:	Storing a document at one place to avoid duplication	
195. A ____ methodology progresses from the specific to the general	Bottom up	
196. Using MPEG techniques, video presentations can be successfully relayed over communication paths that provide transfer rate	40 Mbps	
197. Search Engines can search type of information.	Documents.Images.videos	
198. World Wide Web was adopted as a standard approach for linking documents over the Internet because:	It got widely popular after incorporating support for multimedia content	
199. A negative exponent would mean to move the radix point	To left	
200. can store unique pattern of 21 bits.	Unicode	
201. Which of the following is true for Flip Flops?	Generate output individually	
202. To identify individual cells in a Computers main memory. each cell is assigned a unique name	Address	
203. The process of using DNS to perform an address	DNS lookup	

For Help 0331-6214835

translation is called a		
204. By using MPEG and MP3 compression techniques, video cameras are able to record video within	128 MB of storage	
205. If we are interested to see the map of some location, we can use map operator in the following way:	Map: Location	
206. A negative exponent would mean to move the radix point	To left	
207. can store unique pattern of 21 bits.	Unicode	
208. wHICH tier of ISP is the backbone of Internet?	Tier-1 ISPs	
209. Always write a pseudo code in ___ manner.	Unambiguous	
210. which operation can be used to invert all of the bits of an RGB bitmap image?	XOR	
211. CPU and RAM are connected with to communicate with each other. **212.** HDTV is an acronym of	BUS	
213. HDTV is an acronym of	High definition television	
214. The inurL operator finds ----- web pages which contains the mentioned query in the URL of the web pages	ALL	
215. The repetitive use of an instruction or sequence of instructions is called	LOOP	
216. On Social media, sometimes, a particular is very popular.	Rash tag	
217. One bit can contain only value.	One	
218. divides long messages into small segments, which are transmitted over the Internet.	Transport layer	

For Help 0331-6214835
