Q.1 Factor influencing the length of time required for heat sterilization of a food product.

A. Temperature of the retort

B. Type of product

C. Agitation of the container

D. Size of the container

Q.2 Characteristic of ---------- distinguishes UHT equipment, making it suitable for processing very big containers compared to conventional retorting

A. Instant heating

B. Steam injection

C. Constant cleaning

D. Small volume exposure

Q.3 Pasteurization in low acid foods such as milk results in ----------

A. Increase acidity

B. Improve texture

C. Minimize pathogens

D. Enhance color

Q.4 Incubating plates in the dark during the enumeration of yeasts and molds results in ----------

A. Prevent spore dislodgement

B. Improve visibility

C. Enhance growth

D. Minimize contamination

Q.5 Method involves substituting the air inside a package with a protective gas mix to extend the shelf life of fresh food products.

A. Modified atmosphere packaging (MAP)

B. Freezing

C. Sun drying

D. Pickling
