Q.1 _____ processor is based on CISC architecture.

A. MIPS

B. SPARC

C. PowerPC

D. Intel

Q.2 JCL is abbreviation of_____.

A. Job control language

B. Job controller language

C. Job control logic

D. Job communication language

Q.3 When the CPU wants to "store" a bit pattern in the controller, which type of instruction is executed?

A. Store Instruction

B. Receive Instruction

C. Jump Instruction

D. Load Instruction

Q.4 What are the software units that communicate with the controller or sometimes directly with peripheral devices?

A. Operating system

B. Device drivers

C. System software

D. Utility program

Q.5 _____ Boolean operation produces the output as 1 when both inputs are 1.

A. AND

B. XOR

C. OR

D. NOT

Q.6 The transfer of data sequentially is known as:

A. Direct communication

B. Serial communication

C. Simple communication

D. Parallel communication

VU TOOLKIT

Q.7 Computer does not understand any language except:

A. High level language

B. Assembly language

C. Binary language

D. Human language

Q.8 An instruction register holds the machine instruction, which is _____.

A. Being transferred now

B. Being loaded now

C. Being executed now

D. Being stored now

Q.9 Which Excess notation is used to represent Zero as 10000?

A. Excess 2

B. Excess 8

C. Excess 16

D. Excess 4

Q.10 Using _____, you can search images even by giving a query of another image.

A. Song link

B. YouTube link

C. Dedicated web link

D. Video link
