Q.1 What will be the output of the following pseudocode? marks = 60 if (marks>=50) Print(You have passed the examination) Else Print(You have failed the examination)

A. No message will be displayed

B. You have passed the examination

C. Both messages will be displayed

D. You have failed the examination

Q.2 Post test loop structure refer to?

A. Test for termination is performed as well as the body is executed

B. Test for termination is performed with the body is executed

C. Test for termination is performed before the body is executed

D. Test for termination is performed after the body is executed

---

Q.3 In a two-dimensional array, what does the second index in a pair identify?

A. Row associated with the position

B. Field name

C. Column associated with the position

D. Numerical index number

Q.4 What is the goal of beta testing?

A. Learning how software performs in real-life situations.

B. Executing each instruction at least once.

C. Identifying equivalence classes.

D. Focusing efforts in a concentrated area.

Q.5 In the case of _____that are subject to heavy transaction loads, it is highly likely that a random snapshot will find the database in the middle of some transaction.

A. small database

B. object oriented programming

C. large databases

D. web development

Q.6 The initialization step in loop structure establishes a starting _____.

A. Total Number of code lines

B. Body

C. Function definition

D. Condition

Q.7 _____loop structure referred to as a post-test loop

A. While

B. For

C. Repeat

D. For each

Q.8 Why has software engineering struggled to find a rigorous footing, compared to other engineering disciplines?

A. Lack of quantitative techniques in measuring software properties

B. Inability to develop generic software components

C. Overreliance on prefabricated components

D. Lack of engineering principles

Q.9 If we seek the JobTitle column within a relation named NEW1, the expression would be: SELECT ____ FROM NEW1;

A. Department

B. JobTitle

C. EmployeeID

D. Salary

Q.10 The statement z=x+y shows

A. The sum of X and Y be assigned to the variable Z

B. The Y be assigned to the variable Z

C. The sum of x and z be assigned to the variable y

D. The X and Y be assigned to the variable Z
