Q.1 In use case diagram, an ellipse signifies a(n):

A. class

B. use case

C. system boundary

D. actor

Q.2 At which stage of software development loop, results are delivered?

A. Technical development

B. Status quo

C. Problem definition

D. Solution integration

Q.3 The project manager would need _____ document to monitor and track the progress of the project.

A. Planning

B. Requirement

C. Project

D. Design

Q.4 The context diagram is used as the top level abstraction in a _____ developed according to principles of structured analysis.

A. Dataflow diagram

B. USe Case Diagram

C. Activity Diagram

D. State Transition Diagram

Q.5 The data on which the program operates is also considered as part of the _____.

A. Utility Software

B. Logical Data

C. Important Data

D. Software

Q.6 Use case construction is a technique used for:

A. requirements structuring.

B. user interface design.

C. requirements determination.

D. database design.

Q.7 The condition that must be met before the use case can be invoked, is called:

A. Pre-Condition

B. Post-Condition

C. Pre-Assertion

D. Post-Assertion

Q.8 Requirement engineering mainly deals with the _____ of the system.

A. Definition Phase

B. Maintenance Phase

C. Vision Phase

D. Development Phase

Q.9 The _____ relationship is kind of a generalization specialization relationship.

A. Binary

B. Uses

C. Bit-Byte

D. Extends

Q.10 The process of utilizing our knowledge of computer science in effective production of software systems is called _____.

A. Electrical Engineering

B. Software Engineering

C. Chemical Engineering

D. Computer Engineering

Q.11 The information security transformation framework is recommended for_____.

A. Research organizations and academia

B. Effective implementation of information security given the current challenges of information security in Pakistan

C. Information security governance

D. Military and law enforcement organizations

Q.12 Iso27001:2013 (isms) clause 5.1 talks about_____.

A. None of the given

B. Internal audit

C. Policy, resources, continual improvement, quarterly board review

D. Policy and objectives, integration into processes, resources, communication, promoting continual improvement, intended outcomes

---

Q.13 Security in the trenches refers to_____.

A. A form of ransom ware

B. Most basic security hardening activities usually carried out by junior staff

C. Vulnerability management

D. Security intelligence

Q.14 What do you mean by RTO in a business continuity plan?

A. Minimum frequency of backups

B. Maximum age of files that an organization must recover from backup storage for normal operations to resume after disaster

C. Both a & b

D. Maximum downtime an organization can handle

Q.15 One of the major challenges of information security in Pakistan is that it is_____.

A. Not funded adequately

B. Misunderstood

C. Reactive and superficial

D. Not considered important

Q.16 The key factor related to cloud, mobile, IOT, and social is that_____.

A. These new frontiers are not understood well

B. It has further complicated the already difficult task of achieving a strong security posture

C. Adoption is low

D. They are mainly being used in developing nations

Q.17 As per ISACA, risk_____.

A. A necessary part of the business

B. Is usually accomplished by ensuring that impact of threats exploiting vulnerabilities is within acceptable limits at an acceptable cost

C. Is a complex concept which only senior management should address at board level

D. Should be eliminated altogether for best security implementation

---

Q.18 Security governance simply means_____.

A. Maintaining the security program

B. Policies and procedures

C. Initiating the security program

D. Managing the security program

VU TOOLKIT

Q.19 The information security transformation model:

A. Have four layers with the first and most important layer on the top: security governance

B. Necessary, however, models are only for reference purposes

C. Is an international model developed by ISACA and is widely deployed globally

D. Four layers, with the first layer being on the bottom: security hardening

---

Q.20 The impact of vm sprawl is that_____.

A. Vms can be created quickly, self-provisioned, or moved between physical servers, leading to too many vm's

B. Vms can be created quickly, self-provisioned, or moved between physical servers, causing performance issues

C. Virtual machines may not be allocated sufficient resources

D. Vms can be created quickly, self-provisioned, or moved between physical servers, avoiding conventional change management process

---
