Q.1 Basically WAN follows the rules/standards developed by _____.

A. RFC
B. ITU
C. IEEE
D. IETF

Q.2 Devices in a network send bits in groups, generally called _____.

A. Bundles
B. Packets
C. Groups
D. Containers

Q.3 In the context of computer networks, RFC stands for _____.

A. Repeat for communication
B. Repeat for comments
C. Request for comments
D. Request for communication

Q.4 _____ is a string of characters that uniquely identifies a website.

A. URL
B. None of the Given
C. Both of the given
D. Web Address

Q.5 What does a switch use to make decisions about where to forward frames?

A. MAC address table
B. Port number table
C. IP address table
D. Subnet mask table

Q.6 First part of an email address before "@" sign, specifies the _____.

A. All of the given
B. Host name
C. User name
D. Server name

Q.7 NIC stands for _____.

A. Network Interface Card
B. Node Interface Card
C. Network Internal Card
D. Node Internal Card

Q.8 Router is basically a _____ device.

A. Broadcast
B. None of given
C. WAN device
D. LAN device

Q.9 If the frame check sequence calculated at the sender is same on the receiver then it means data is_____.

A. Error free
B. Suspicious
C. Erroneous
D. Altered

Q.10 In the context of computer networks, IEEE stands for ____.

A. Institute of Electrical and Electronic Emporium
B. Institute of Electrical and Electronic Engineers
C. Institute of Engineering and Electrical Emporium
D. None of the given
