Q.1 Which method of Node class returns the value of node in a Linked list?

A. get()

B. tail()

C. start()

D. back()

Q.2 What does the following method do for a given linked list class? void traverse(List list) { Node* savedCurrentNode = list.currentNode; list.currentNode = list.headNode; for(int i = 1; list.next(); i++) {cout << "\n Element " << i << " " << list.get(); } list. currentNode = savedCurrentNode; }

A. Displaying the values of nodes

B. Updating the values of nodes

C. Adding new nodes

D. Deleting nodes

Q.3 Nodes in the linked list are accessed in _____ order:

A. Random

B. Descending

C. Sequential

D. Non-linear

Q.4 Which of the following is used to navigate from one node to another node in the linked list?

A. Object field of node

B. Null pointer

C. None of the given options

D. Next part of node

Q.5 Which of the following statement declares an array 'x' with 6 integers?

A. int [6] x;

B. int x = 6;

C. float x[6];

D. int x[6];
