Q.1 Which of the following is pure virtual function?

A. void print() = 0;

B. virtual void print() = 0;

C. virtual void print();

D. void print();

Q.2 What does the virtual keyword ensure when used in a base class function in C++?

A. Early binding

B. Constructor overloading

C. Static function resolution

D. Dynamic binding

Q.3 In statement "template <class T, class U, int I = 5>" ,the non-type parameter is _____.

A. int I

B. class T

C. class U

D. All of the given options

Q.4 Which of the following function can convert a class into an abstract class?

A. Virtual function

B. Abstract function

C. Pure virtual function

D. Concrete function

Q.5 Which statement will be true for concrete class?

A. It cannot be inherited from an abstract class.

B. It can be instantiated.

C. It cannot be instantiated.

D. None of given options.

Q.6 In C++, dynamic binding and polymorphism will be achieved when member function will be ___.

A. private

B. virtual

C. public

D. inline

Q.7 Which class has at least one pure virtual function?

A. Child class

B. Abstract class

C. Concrete class

D. Template class

Q.8 Each _____ of a template class by default becomes function template.

A. Member function

B. Type parameter

C. Data member

D. Object

Q.9 Which of the following represents complete specialization?

A. template< int , char >

B. template< class T, float >

C. template< class T, class U, int >

D. template< class class W >

Q.10 Which of the following represents partial specialization?

A. template< int , char >

B. template< class T, type T>

C. template< typename T, class W >

D. template< class T, class U, int >

**Q.11 _____ binding means that target function for a call is selected at compile time. **

A. Dynamic

**B. Static **

C. Automatic

D. Default

Q.12 Polymorphism always works with _____.

A. actual objects

B. static objects

C. pointer to class objects

D. constant objects

Q.13 Which of the following is correct code to instantiate the object of given template Vector class for int type?

A. Vector int obj;

B. Vector obj <int>;

C. Vector <int> obj;

D. Vector obj<>int;

Q.14 Which of the following is the correct syntax for passing two type arguments to a template?

A. template< typename T, typename U >

B. template Typename< T, U >

C. template< type T, U >

D. template< type T, type U >

Q.15 _____ binding means that target function for a call is selected at run time.

A. Dynamic

B. Constant

C. Automatic

D. Static

Q.16 Which of the following is known as Dereference operator in C++?

A. ::

B. &

C. +

D. *

```
template <class T>
class Vector
{
};
```
