Q.1 There are _____ registers in Intel 8088 that can hold the address of data.

A. 5
B. 2
C. 3
D. 4

Q.2 Synchronization between the processor and the memory for read and write operations is done by the _____.

A. Cache bus
B. Address bus
C. Data bus
D. Control bus

Q.3 Group of bits processor uses to inform memory which element to read/write is collectively known as

A. RAM
B. Data bus
C. Address bus
D. Control bus

Q.4 Extended Shifting Algorithm consists of:

A. 2 instructions
B. 4 instructions
C. 1 instruction
D. 3 instructions

Q.5 IAPX88 stands for _____ .

A. Intel Active Processor Extensions 88
B. Intel Advanced Processor External 88
C. Intel Advanced Processor Extensions 88
D. Intel Advanced Process Extensions 88

Q.6 In case of short jump, the offset is stored in _____ .

A. 1 byte
B. 16 bytes
C. 4 bytes
D. 2 bytes

Q.7 In assembly language, the first executable instruction of the program should be placed at the offset _____.

A. 0x1100

B. 0x0100

C. 0x0010

D. 0x0000

Q.8 8088 is a _____ processor with its accumulator and all registers of _____.

A. 16 bit, 16 bits

B. 16 bit, 32 bits

C. 8 bit, 8 bits

D. 32 bit, 32 bits

Q.9 mov [1234], ax is an example of _____ addressing.

A. base register indirect

B. direct

C. base + index

D. register indirect

Q.10 A/An _____ is an area of memory that holds all local variables and parameters.

A. base register

B. data segment

C. stack

D. instruction pointer
