BIO5105 - Quiz No.1

Date: 04 November 2025

Q.1 The internal surface of the plasma membrane contains which structural elements?

A. Ribosome elements
B. Peroxisome element
C. Skeletal elements
D. Mitochondrial elements

Q.2 Who provided experimental proof for biogenesis?

A. Robert Hooke
B. Louis Pasteur
C. Anton van Leeuwenhoek
D. Robert Brown

Q.3 All cells of a multicellular organism have

A. Same genetic material with same functions
B. Same genetic material with different functions
C. Different genetic materials with different functions
D. Different genetic material with same functions

Q.4 The nucleolus is present in which cellular organelle?

A. Cytoplasm
B. Nucleus
C. Chloroplast
D. Mitochondria

Q.5 Cytoskeleton is composed of:

A. Microfilaments, microbes and intermediates filaments
B. Microsatellite, microtubules and intermediates filaments
C. Microfilaments, microtubules and internal filaments
D. Microfilaments, actin filaments and intermediates filaments

---

Q.6 The statement "All living organisms are composed of one or more cells" is part of:

A. Cell theory
B. Biogenesis hypothesis
C. Germ theory
D. Endosymbiotic theory

Q.7 What are the two key factors responsible for information or interactions mediated by proteins?

A. Molecular weight and temperature
B. Ionic bonds and structure
C. Amino acid sequence and chemical nature
D. Molecular weight and ionic charge

Q.8 New cells arises from:

A. Proteins
B. Damaged Cells
C. Dead Cells
D. Pre existing Cells

Q.9 What is the charge of the R-group (side chain) of lysine, an amino acid commonly found in proteins?

A. Negative charge
B. Nonpolar
C. Neutral
D. Positive charge

Q.10 Protein can be denatured by:

A. pH
B. Replication errors in DNA
C. pH changes, heat, or chemical agents
D. Protein folding
