

Psy409 (Positive Psychology)

Midterm Questions

Q1. Three Ways to Build Positive Relationships

1. **Active Listening:** Paying full attention, showing empathy, and understanding the other person's perspective strengthens trust and connection.
 2. **Expressing Gratitude:** Regularly appreciating others' efforts, verbalizing thanks, and acknowledging contributions nurtures positive bonds.
 3. **Shared Activities & Experiences:** Engaging in common interests, hobbies, or meaningful experiences promotes collaboration and emotional closeness.
- Positive relationships improve well-being, reduce stress, and enhance resilience.

Q2. Three Positive and Three Negative Emotions from Parnas X; Explain One and Which Emotion You Have Most

- **Positive Emotions:** Joy, Gratitude, Hope
- **Negative Emotions:** Anger, Fear, Sadness
- **Explanation (Joy):** Joy is a feeling of pleasure, delight, or happiness often resulting from positive events or achievements. It broadens thinking, promotes social bonds, and increases motivation.
- **Personal Reflection:** Most of the day, I experience **gratitude**, as appreciating small things helps me stay optimistic and connected to others.

Q3. Three Measures of Situational Self-Efficacy

1. **Confidence in Performing Specific Tasks:** Assessing belief in one's ability to complete a particular activity successfully.
 2. **Perceived Control Under Pressure:** Measuring how much control an individual feels over outcomes in challenging situations.
 3. **Persistence and Effort:** Evaluating willingness to continue efforts despite obstacles or failures.
- These measures help predict performance, motivation, and coping in different life situations.

Q4. Five Deadly Sins from the Seven Sins in Christianity

1. **Pride** – Excessive self-focus or arrogance.
2. **Greed** – Desire for excessive wealth or material gain.
3. **Lust** – Uncontrolled or excessive sexual desire.
4. **Envy** – Resentment toward others' success or possessions.
5. **Gluttony** – Over-indulgence in food or drink.

- The remaining two sins are Wrath (anger) and Sloth (laziness). These sins highlight moral and psychological pitfalls affecting personal and social well-being.

Q5. If You Had Two Options to Live a Life, Would You Choose to Become Rich or Live a Meaningful Life?

- Choosing a **meaningful life** aligns with **eudaimonic well-being**, focusing on purpose, personal growth, and contribution to others.
- Research shows that meaningful lives provide **long-term happiness**, resilience during stress, and stronger relationships, whereas wealth alone may bring temporary pleasure but not fulfillment.
- A meaningful life allows developing strengths, nurturing relationships, and achieving goals aligned with personal values.

Q6. Statements According to Domains of Self-Efficacy

- Self-Efficacy:** Belief in one's ability to perform tasks successfully. Example: "I can manage my daily responsibilities effectively."
- Response-Efficacy:** Belief that a specific action will produce desired outcomes. Example: "If I exercise regularly, my health will improve."
- Self-Esteem:** Overall evaluation of personal worth. Example: "I am a capable and valuable individual."
- Belongingness:** Feeling accepted and connected to a group. Example: "I feel included and supported by my friends and colleagues."

Q7. Emotional Balance Act

- Emotional balance act refers to the ability to **manage both positive and negative emotions effectively**.
- It involves **acknowledging negative emotions** like anger or sadness while **cultivating positive emotions** like joy, gratitude, and hope.
- Practicing emotional balance improves **resilience, decision-making, and well-being** in daily life.
- Techniques include **mindfulness, cognitive reframing, and expressive writing** to regulate emotions.

Q8. Eudaimonia and Hedonic Psychology

- **Hedonic Psychology:** Focuses on **pleasure, positive experiences, and minimizing pain**. The main goal is to maximize happiness through enjoyment and comfort.
- **Eudaimonic Psychology:** Focuses on **meaning, personal growth, and self-realization**. Happiness is achieved by living according to one's values, purpose, and virtues.
- **Key Difference:** Hedonic = pleasure-focused; Eudaimonic = purpose and meaning-focused.

Q9. Christianity – Seven Sins (Enlist Any Five)

1. **Pride** – Excessive self-focus or arrogance.
2. **Greed** – Desire for wealth or material gain beyond necessity.
3. **Lust** – Uncontrolled sexual desire.
4. **Envy** – Resentment toward others' success or possessions.
5. **Gluttony** – Over-indulgence in food or drink.
(Remaining two sins are Wrath and Sloth.)

Q10. Three-Fold Structure of Emotional Well-Being

1. **Positive Affect:** Experiencing frequent positive emotions such as joy, gratitude, and contentment.
2. **Absence of Negative Affect:** Minimizing experiences of negative emotions like sadness, fear, and anger.
3. **Life Satisfaction:** Cognitive evaluation of life as meaningful, fulfilling, and aligned with personal goals.

Q11. Any Three Optimism Factors

1. **Positive Expectancy:** Belief that good things will happen in the future.
2. **Active Coping:** Tendency to take proactive steps to overcome challenges.
3. **Resilience:** Ability to recover quickly from setbacks and maintain hope.

Q12. Three Characteristics of a Person Having High Self-Efficacy

1. **Confidence in Abilities:** Believes they can complete tasks successfully even in challenging situations.
2. **Persistence:** Keeps trying despite failures or setbacks, showing resilience.
3. **Positive Outlook:** Views challenges as opportunities for growth and learning, not as threats.

Q13. Three Ways to Nurture Spirituality

1. **Mindfulness and Meditation:** Regular practice helps in connecting with one's inner self.
2. **Engaging in Meaningful Activities:** Volunteering, helping others, or pursuing a purpose-driven life.
3. **Reflection and Self-Awareness:** Journaling, prayer, or contemplation to understand personal values and life purpose.

Q14. Ali is Rich. Is There Any Possibility That He is Also Happy? Give Reason Why or Why Not

- **Yes, it is possible**, but wealth alone does not guarantee happiness.
- Happiness depends on **meaningful relationships, personal growth, and purpose** (Eudaimonic well-being), not just material gains.
- If Ali uses his wealth to support his goals, help others, and engage in fulfilling activities, he can experience both **financial comfort and happiness**.

Q15. Detail History Behind Positive Psychology

- Positive psychology emerged in **late 1990s** as a reaction to traditional psychology, which mainly focused on mental illness and deficits.
- **Martin Seligman** is considered the father of positive psychology; he emphasized studying **what makes life worth living**.
- Key influences include: **humanistic psychology** (Maslow, Rogers), research on happiness, and **character strengths studies**.
- Aim: To understand **strengths, virtues, well-being, and resilience**, not just pathology.

Q16. If You Have Two Options – Money or Meaningful Life, Which One Will You Choose? Give 5 Reasons

1. **Purpose and Fulfillment:** Meaningful life provides a sense of direction and satisfaction.
2. **Long-Term Happiness:** Meaning contributes to enduring well-being beyond temporary pleasures of money.
3. **Positive Impact:** Ability to help others and contribute to society.
4. **Personal Growth:** Encourages learning, resilience, and self-development.
5. **Stronger Relationships:** Living meaningfully often strengthens connections with family, friends, and community.

Q17. Emotion Balancing Act

- Emotional balance involves **managing positive and negative emotions effectively**.
- A person acknowledges negative emotions like fear or sadness but **cultivates positive emotions** like gratitude, joy, and hope.
- Techniques include **mindfulness, cognitive reframing, expressive writing**, and stress management practices.
- Benefits: Enhances **decision-making, resilience, and overall well-being**.

Q18. Four Dimensions of MSCEIT – State Any Two

1. **Perceiving Emotions:** Ability to recognize emotions in faces, voices, and art.
2. **Using Emotions to Facilitate Thought:** Using emotional information to guide thinking and problem-solving.
(Other two dimensions: *Understanding Emotions, Managing Emotions*)

Q19. Bandura's Five Antecedents of Self-Efficacy – Examples from Life

1. **Mastery Experience:** Success in previous tasks builds confidence. (*Example: Completing a difficult assignment successfully.*)
2. **Vicarious Experience:** Observing others succeed. (*Example: Seeing a peer perform well motivates you to try.*)
3. **Social Persuasion:** Encouragement from others. (*Example: Teacher praising your effort boosts confidence.*)

4. **Emotional States:** Managing stress and anxiety positively. *(Example: Deep breathing before presentation reduces nervousness.)*
5. **Physiological Feedback:** Interpreting body signals. *(Example: Feeling energized before exercise enhances performance.)*

Q20. Western Viewpoint About Positive Well-Being

- The Western perspective emphasizes **individual happiness, personal achievement, and self-actualization**.
- Positive well-being is often linked with **material success, personal freedom, and life satisfaction**.
- It focuses on **hedonic happiness** (pleasure and avoidance of pain) as well as **psychological strengths** such as optimism, resilience, and self-efficacy.
- Western models often integrate **scientific measurement** of happiness and well-being using questionnaires and scales.

Q21. Three Missions of World War II

(Assuming this refers to historical or motivational frameworks used in positive psychology context; if literal WWII missions, then historical explanation is given.)

1. **Restoration of Peace:** Main aim was to end global conflict and restore political stability.
2. **Protection of Human Rights:** Prevent human rights violations and promote democratic values.
3. **Economic and Social Recovery:** Rebuild nations' infrastructure, economies, and social systems affected by war.

Q22. Five Parts of the Brain

1. **Frontal Lobe:** Responsible for reasoning, planning, decision-making, and voluntary movements.
2. **Parietal Lobe:** Processes sensory information such as touch, temperature, and pain.
3. **Temporal Lobe:** Involved in auditory processing, memory, and language comprehension.
4. **Occipital Lobe:** Main center for visual processing.
5. **Cerebellum:** Coordinates balance, posture, and fine motor movements.

Q23. Emotional Balance Act

- Emotional balance involves **recognizing, understanding, and managing both positive and negative emotions** effectively.
- A person maintains equilibrium by **acknowledging negative emotions** like sadness, fear, or anger, while **cultivating positive emotions** such as joy, gratitude, and hope.
- Techniques include **mindfulness, cognitive reframing, expressive writing, and relaxation exercises**.
- Benefits: Improves **decision-making, stress management, resilience, and overall psychological well-being**.

Q24. Eudaimonia and Hedonic Psychology

- **Hedonic Psychology:** Focuses on **pleasure, enjoyment, and avoidance of pain** as the main contributors to happiness.
- **Eudaimonia:** Focuses on **meaningful living, personal growth, and self-realization** rather than mere pleasure.
- Hedonic well-being is **short-term satisfaction**, while eudaimonic well-being promotes **long-term fulfillment and life purpose**.
- Positive psychology integrates **both approaches** to understand complete human flourishing.

Q25. Christianity – Seven Sins (Enlist Any Five)

1. **Pride** – excessive self-focus and arrogance.
 2. **Greed** – intense desire for wealth or possessions.
 3. **Lust** – excessive desire for physical pleasures.
 4. **Envy** – jealousy of others' success or possessions.
 5. **Wrath** – uncontrolled anger or hatred.
- (Other two: *Gluttony, Sloth*)

Q26. Three-Fold Structure of Emotional Well-Being

1. **Emotional Awareness:** Recognizing and understanding one's own emotions.
2. **Emotional Regulation:** Managing emotions effectively in different situations.
3. **Emotional Expression:** Appropriately expressing emotions to communicate and connect with others.

Q27. Any Three Optimism Factors

1. **Explanatory Style:** Viewing negative events as temporary and specific rather than permanent and pervasive.
2. **Resilience:** Ability to recover quickly from setbacks and maintain positive expectations.
3. **Hopefulness:** Belief in achieving desired goals and expecting favorable outcomes in the future.

Q28. Define Affect and Emotions. How They Are Same Sides of a Process (Chp 6)

- **Affect:** A general feeling state that can be positive or negative, representing overall mood or disposition.
- **Emotions:** Specific, intense feelings directed at a particular object, event, or situation (e.g., anger, joy, fear).
- **Same Sides of a Process:** Affect and emotion are connected; affect is the **broad, ongoing experience**, while emotions are **specific responses within that affective state**. Together, they guide behavior, decision-making, and social interactions.

Q29. Broaden-and-Build Model (Chp 7)

- Proposed by Barbara Fredrickson, this model states that **positive emotions broaden a person's thought-action repertoire**, allowing them to explore, play, and build personal resources.
- Over time, this **building of resources** (social, intellectual, psychological, and physical) enhances resilience and well-being.
- Example: Joy encourages creativity, play, and exploration, which over time strengthens skills, friendships, and coping abilities.

Q30. History of Self-Efficacy (Chp 14)

- Concept introduced by **Albert Bandura** in social cognitive theory.
- Defined as **one's belief in their ability to perform a specific task successfully**.
- Self-efficacy influences **motivation, effort, persistence, and emotional responses**.
- Bandura identified **five antecedents of self-efficacy**: mastery experiences, vicarious experiences, verbal persuasion, physiological states, and emotional arousal.

Q31. Juvenile Play Builds Three Resources (Chp 7)

- **Physical Resource**: Enhances coordination, strength, and motor skills.
- **Cognitive Resource**: Improves problem-solving, creativity, and learning.
- **Social Resource**: Strengthens cooperation, empathy, and communication skills.

Q32. Scenario-Based Question (Behavior Assessment)

- Two scenarios are given; **the scenario showing positive, prosocial, and constructive behavior** is considered correct.
- Example: A child sharing toys in a group shows cooperative and socially adaptive behavior.

Q33. VIA Creation Base (Short Question)

- VIA (Values in Action) classification is based on **character strengths and virtues** identified through self-report, behavioral observation, and psychological research.

Q34. Six Factors Related to Self-Efficacy

1. **Mastery Experiences**: Past successes increase self-efficacy.
2. **Vicarious Experiences**: Observing others succeed strengthens belief in one's abilities.
3. **Verbal Persuasion**: Encouragement from others boosts confidence.
4. **Physiological and Emotional States**: Positive physical and emotional states improve efficacy.
5. **Imaginal Experiences**: Visualizing successful outcomes reinforces belief in capability.
6. **Social Modeling**: Seeing similar individuals succeed enhances one's own self-efficacy.

Q35. System of Classification of Strengths: Lacking Factor and Its Reason

- **System of Classification of Strengths:** VIA (Values in Action) framework classifies **character strengths** into six core virtues: wisdom, courage, humanity, justice, temperance, and transcendence.
- **Lacking Factor:** Some researchers argue that VIA lacks **cultural and contextual flexibility**, meaning not all strengths are equally valued or relevant across different societies.
- **Reason:** The framework was developed mainly in Western contexts; cultural norms and societal expectations in non-Western cultures may prioritize different traits, causing some strengths to be underrepresented or less emphasized.

Q36. LOTR (Life Orientation Test-Revised) Prediction: Five Examples

LOTR predicts optimism vs. pessimism; here are five real-life examples:

1. **Academic Performance:** High optimism predicts persistence in studies despite failures.
2. **Sports Performance:** Optimistic athletes recover faster from setbacks or injuries.
3. **Health Outcomes:** Optimistic individuals show better recovery after surgery or illness.
4. **Job Satisfaction:** Optimistic employees handle stress better and report higher job satisfaction.
5. **Relationship Satisfaction:** Optimistic people maintain positive relationships and resolve conflicts constructively.

Q37. Differentiate Between High Hoppers and Low Hoppers (with Examples)

Feature	High Hoper	Low Hoper
Expectation	Expects positive outcomes	Expects negative outcomes
Persistence	Maintains effort despite obstacles	Gives up easily
Example	Student believes she can score well despite difficult exams	Student assumes failure even before starting study

Q38. Suggest Six Strategies to Stay Happy in Life

1. **Practice Gratitude:** Write daily 3 things you are thankful for.
2. **Engage in Physical Activity:** Exercise releases endorphins, improving mood.
3. **Maintain Social Connections:** Spend time with supportive friends and family.
4. **Pursue Meaningful Goals:** Focus on tasks aligned with personal values.
5. **Mindfulness and Meditation:** Reduce stress and enhance present-moment awareness.
6. **Positive Self-Talk:** Reframe negative thoughts to encourage optimism and resilience.

Q39. Enlist Your 3 Strengths and 3 Weaknesses; Which Comes First and Why?

- **Three Strengths:**
 1. Empathy – ability to understand others' feelings.
 2. Perseverance – ability to keep working despite challenges.
 3. Optimism – tendency to see positive outcomes.

- **Three Weaknesses:**
 1. Procrastination – delaying tasks unnecessarily.
 2. Impatience – difficulty waiting for results.
 3. Self-criticism – being overly harsh on oneself.
- **Which Comes First in Mind:** Strengths usually come first because our mind naturally recalls positive traits that define our identity. Weaknesses may require more reflection and self-awareness to recognize.

Q40. Two Situations Using Provocative Emotion vs Avoiding Provocative Emotion

- **Situation 1 – Using Provocative Emotion:**
Example: During a debate, I used my anger to passionately argue my point.
 - **Benefit:** Increased motivation and assertiveness.
 - **Disadvantage:** May cause conflict or hurt relationships.
- **Situation 2 – Avoiding Provocative Emotion:**
Example: When a colleague criticized me, I stayed calm and did not react emotionally.
 - **Benefit:** Maintained peace and controlled stress.
 - **Disadvantage:** May feel suppressed and less assertive.

Q41. Five Emotional Expressions

1. Happiness – smiling, laughter.
2. Sadness – crying, slumped posture.
3. Anger – frowning, clenched fists.
4. Fear – wide eyes, trembling.
5. Surprise – raised eyebrows, open mouth.

Q42. How Old Men Are Optimist, Loving, and Happy in Life Challenges

- Older adults often develop optimism through life experience and coping skills.
- Loving nature comes from strong social bonds with family and friends.
- Happiness arises from focusing on meaningful life events rather than material gains.
- Challenges are approached with resilience and gratitude, making them psychologically stronger.

Q43. How Stereotypes Affect Life of Humans in Both Genders (2 Examples Each)

- **Males:**
 1. Pressure to be strong may prevent seeking help for mental health issues.
 2. Expected to be dominant in work can create stress and limit emotional expression.
- **Females:**
 1. Expected to manage household and work may cause role overload and stress.
 2. Stereotyped as less capable in STEM fields may reduce confidence and opportunities.

Q44. Three Basic Structures of Emotional Well-being

1. **Positive Affect:** Experiencing frequent positive emotions like happiness, joy, and contentment.
2. **Negative Affect:** Ability to manage and reduce negative emotions such as anger, sadness, or anxiety.
3. **Life Satisfaction:** Overall evaluation of life as meaningful, fulfilling, and balanced.

Explanation: These three structures interact to form emotional well-being. For example, high positive affect combined with low negative affect and strong life satisfaction indicates good emotional health.

Q45. Developmental Roots of Optimism

- Optimism often develops through:
 1. **Early life experiences:** Positive reinforcement, supportive caregivers, and successful coping in childhood.
 2. **Social learning:** Observing role models and their optimistic behavior.
 3. **Cognitive patterns:** Developing positive thinking habits and resilience to failures.

Explanation: People who experience support and success early tend to expect positive outcomes in the future.

Q46. Explaining Collectivist Culture Benefits to an Individualistic Friend

- **Scenario:** Your friend is from an individualistic culture, focused only on personal success.
- **How to Explain:**
 1. Highlight that collectivist culture emphasizes teamwork, mutual support, and strong community bonds.
 2. Explain that working with society can lead to long-term benefits: shared resources, emotional support, and sustainable success.
 3. Use examples: participating in community projects can improve social reputation, reduce stress, and create opportunities that personal effort alone cannot achieve.
- **Goal:** Help your friend see that balancing personal goals with community support enhances overall success and well-being.

Q47. Enlist Three Areas of Human Experience and Explain One

1. **Cognitive Experiences:** Thoughts, beliefs, and problem-solving processes.
2. **Emotional Experiences:** Feelings, moods, and emotional regulation.
3. **Social Experiences:** Interactions with family, friends, and society.

Explanation (Emotional Experiences): Emotional experiences shape how individuals perceive and respond to events. Positive emotions can enhance creativity, resilience, and well-being, while unmanaged negative emotions can cause stress and mental health issues.

Q48. Stanton et al. Work on Negative Experiences

- Stanton et al. focused on how **negative experiences** like stress, loss, or trauma affect psychological and physical health.
- They highlighted the **importance of coping mechanisms** and emotional processing to prevent long-term adverse outcomes.
- Their work emphasizes that managing negative experiences effectively contributes to overall well-being and resilience.

Q49. Neurobiological Basis of Emotional Response

- Emotional responses originate mainly in the **limbic system** of the brain, which includes:
 1. **Amygdala:** Detects emotional stimuli, especially fear and threats.
 2. **Hippocampus:** Helps associate emotions with memories.
 3. **Prefrontal Cortex:** Regulates and controls emotional reactions.
- **Neurotransmitters** like serotonin, dopamine, and norepinephrine play a role in experiencing and regulating emotions.
- *Explanation:* When you feel happiness, fear, or anger, it's the interaction of these brain regions and chemicals that create the emotional response.

Q50. Neurobiological Basis of Optimism and Pessimism

- **Optimism:** Linked to higher activity in the **left prefrontal cortex**, which supports positive thinking, planning, and reward anticipation. Dopamine pathways enhance motivation and positive expectation.
- **Pessimism:** Linked to higher activity in the **right prefrontal cortex**, which is associated with negative bias, threat perception, and withdrawal behavior. Stress hormones like cortisol can strengthen pessimistic thinking.
- *Explanation:* Optimistic and pessimistic tendencies are partially hardwired in the brain but can be shaped by experiences, learning, and cognitive strategies.

Q51. INSTAC Kahan pe H?

- **Answer:** INSTAC (International Standard Classification of Occupations) location or reference depends on the context of the course material. Generally, it's an **international framework maintained by ILO** (International Labour Organization) for classifying occupations globally.

Q52. Pre-operational Stage ke Specific Characteristics

- Stage from **2–7 years** (Piaget's Theory). Characteristics:
 1. **Egocentrism:** Child sees the world only from their perspective.
 2. **Symbolic Thinking:** Use of words and images to represent objects.
 3. **Animism:** Belief that inanimate objects have feelings or intentions.
 4. **Centration:** Focus on one aspect of a situation at a time.

5. **Difficulty with Conservation:** Cannot understand that quantity remains the same despite change in shape or appearance.

Q53. Sociocognitive Theory Kis Ne Di?

- **Answer:** Albert Bandura.
- Focuses on **learning through observation**, imitation, and modeling.
- Highlights the role of **self-efficacy, reciprocal determinism, and cognitive processes** in shaping behavior and personality.

Q54. ABA Stand for

- **Answer:** Applied Behavior Analysis.
- A scientific approach to **understanding and changing behavior** through reinforcement and observation.
- Used in education, therapy (especially autism), and skill training.

Q55. Which Part of Brain Responsible for Language and Learning Acquisition

- **Broca's Area:** Speech production and articulation.
- **Wernicke's Area:** Language comprehension and understanding.
- **Hippocampus:** Memory formation, learning, and retaining new information.
- **Prefrontal Cortex:** Higher-order thinking and planning learning strategies.

Q56. Different Cultures Get Together for a Specific Goal Called

- **Answer:** Intercultural Collaboration or Multicultural Teamwork.
- People from **different cultural backgrounds work together** toward a shared goal, requiring mutual respect, communication, and cultural understanding.

Q57. Erikson Give ... Stages of Development

- **Answer:** 8 Stages of Psychosocial Development:
 1. Infancy: Trust vs. Mistrust
 2. Early Childhood: Autonomy vs. Shame/Doubt
 3. Preschool: Initiative vs. Guilt
 4. School Age: Industry vs. Inferiority
 5. Adolescence: Identity vs. Role Confusion
 6. Young Adulthood: Intimacy vs. Isolation
 7. Middle Adulthood: Generativity vs. Stagnation
 8. Late Adulthood: Integrity vs. Despair

Q58. Good Teacher Qualities

- Clear communication and explanation skills
- Patience and empathy with students

- Encourages critical thinking and curiosity
- Adaptable to different learning styles
- Motivates and inspires students to learn

Q59. Bright Student Qualities

- Curious and eager to learn
- Good problem-solving and analytical skills
- Self-motivated and disciplined
- Participates actively in discussions
- Can balance academics with extracurricular activities

Scenario-Based Questions

- Typically ask how theories or concepts apply in **real-life situations**, like:
 - A student facing failure—how self-efficacy or learned helplessness explains behavior.
 - Cultural differences affecting teamwork.
 - Motivation strategies for achieving goals.

Q60. Explain Self-Concept and Self-Esteem

- **Self-Concept:** Your overall perception of yourself, including beliefs, values, abilities, and personality traits.
- **Self-Esteem:** How you **feel about yourself**, i.e., your self-worth or self-value.
- *Relation:* A positive self-concept usually leads to higher self-esteem, and vice versa.

Q61. Explain Learned Helplessness

- Condition in which an individual **feels unable to control or change a situation** due to repeated failures or negative experiences.
- Leads to **passivity, low motivation, and reduced problem-solving ability**.
- *Example:* A student repeatedly failing exams may stop trying because they believe effort won't change the outcome.

Q62. Ali hit football and hit Ahmed, and Ahmed got angry and hit Ali. Explain the type of aggression

- **Answer:** This is **Reactive (Hostile) Aggression**.
 - It occurs in response to a **perceived threat or provocation**.
 - Driven by **emotions like anger or frustration**, rather than planned intent.
 - Example: Ahmed hitting Ali because he felt hurt or angry.
- **Difference from Instrumental Aggression:** Instrumental aggression is **goal-directed**, planned, and not emotionally driven.

Q63. Research Used Specific Drug for Treatment of Cancer. Find Dependent and Independent Variable

- **Independent Variable (IV):** The **drug** given to patients.
- **Dependent Variable (DV):** The **effect on cancer**, e.g., tumor size reduction, patient survival, or symptom improvement.
- IV is what **researcher manipulates**, DV is what is **measured**.

Q64. Cultural Conflicts Explain with Examples

- **Answer:** Cultural conflict arises when people from **different cultural backgrounds** have **clashing values, beliefs, or practices**.
- Example 1: In an individualistic culture, a student wants to make independent choices, but in a collectivist family, elders expect decisions to consider the family—causing conflict.
- Example 2: Workplace norms differ—Western employees may value direct communication, while Eastern employees value indirect and respectful communication, leading to misunderstandings.
- Managing cultural conflict requires **empathy, awareness, and compromise**.

Q65. Self-Efficacy and Self-Confidence Define

- **Self-Efficacy:** Belief in your **ability to perform specific tasks successfully** in a particular situation.
 - Example: A student believing they can solve a math problem because they practiced before.
- **Self-Confidence:** General feeling of **trust in one's abilities** across different situations.
 - Broader than self-efficacy; may include skills not yet practiced.
- **Relation:** High self-efficacy can increase self-confidence, but confidence may exist even without specific experience.

Q66. Three Major States of Well-Being

- **Hedonic Well-Being:** Focus on **pleasure, happiness, and life satisfaction**. People seek to **maximize positive emotions** and minimize negative ones.
- **Eudaimonic Well-Being:** Focus on **meaning, personal growth, and self-realization**. Happiness comes from fulfilling one's potential.
- **Social Well-Being:** Feeling **connected to community and society**, having supportive relationships, and contributing to collective goals.

Q67. Western View About Positive Well-Being

- Emphasizes **individual achievement, autonomy, and personal success**.
- Happiness is often defined as **personal pleasure or life satisfaction**.
- Individual responsibility for happiness is stressed; less focus on societal or communal factors.

- Criticism: It may undervalue **collectivist values** and **social harmony**.

Q68. Seven Deadly Sins – Enlist Any Five

1. Pride
2. Envy
3. Wrath
4. Gluttony
5. Lust

- Other two: Sloth, Greed
- These sins are considered **moral failures** that harm self and society.

Q69. Six Components of Ryff's Conceptualization of Positive Functioning

1. **Autonomy:** Independence and self-determination.
2. **Environmental Mastery:** Ability to manage life situations effectively.
3. **Personal Growth:** Continuous development and realizing potential.
4. **Positive Relations with Others:** Healthy and trusting relationships.
5. **Purpose in Life:** Having goals and sense of meaning.
6. **Self-Acceptance:** Positive attitude toward self and past experiences.

Q70. Three Pathway Thinking Examples in Daily Life

1. Planning **alternate routes** to reach work on time.
 2. Using **different study methods** to prepare for an exam.
 3. Finding **multiple ways to resolve a conflict** with a friend.
- Pathway thinking helps in **problem-solving and goal achievement**.

Q72. Differentiate Between High Hoppers and Low Hoppers with Examples

- **High Hoppers:** Have strong goals, believe they can find **ways to achieve them**, stay motivated.
 - Example: A student failing a test but plans new strategies to improve.
- **Low Hoppers:** Lack confidence, give up easily, feel blocked in achieving goals.
 - Example: A student fails and stops trying to improve.

Q73. Suggest 6 Strategies to Your Friend to Stay Happy in Life

1. Practice **gratitude** daily.
2. Engage in **physical exercise** regularly.
3. Maintain **positive social relationships**.
4. Set **realistic and meaningful goals**.
5. Practice **mindfulness or meditation**.
6. Focus on **personal growth and learning**.

Q74. Enlist Your 3 Strengths and 3 Weaknesses. Also Tell Whether Strengths Come First Easily in Your Mind or Weaknesses, and Why

- **Three Strengths:**
 1. **Optimism:** Always try to see the positive side of situations.
 2. **Persistence:** Never give up easily when facing challenges.
 3. **Empathy:** Can understand and share the feelings of others.
- **Three Weaknesses:**
 1. **Procrastination:** Sometimes delay important tasks.
 2. **Impatience:** Get frustrated when things take too long.
 3. **Overthinking:** Spend too much time analyzing small problems.
- **Reflection:** Usually, **strengths come first** in mind because people are naturally more aware of their positive qualities and what they feel confident about. Weaknesses may take longer to recognize as they can be uncomfortable to admit.

Q75. Two Situations from Your Life Where You Use Provocative Emotion and Avoid Provocative Emotion. Also Mention Benefits and Disadvantages

- **Situation 1 – Using Provocative Emotion:**
 - Example: Giving a passionate speech to motivate teammates during a match.
 - **Benefit:** Energizes team, increases focus, and encourages action.
 - **Disadvantage:** Can sometimes lead to **over-arousal** or emotional burnout if intensity is too high.
- **Situation 2 – Avoiding Provocative Emotion:**
 - Example: Choosing not to argue with a colleague to maintain peace.
 - **Benefit:** Preserves relationships and reduces stress.
 - **Disadvantage:** May lead to **unexpressed frustration** or unresolved issues.

Q76. Five Emotional Expressions

1. **Happiness:** Smiling, laughing, or showing joy.
2. **Anger:** Frowning, raising voice, or tense body posture.
3. **Sadness:** Crying, downcast eyes, or quiet behavior.
4. **Fear:** Wide eyes, trembling, or retreating behavior.
5. **Surprise:** Raised eyebrows, open mouth, or sudden gestures.

Q77. Characteristics of High Self-Efficacy

Answer:

People with high self-efficacy show the following characteristics:

1. **Strong belief in their abilities** – they feel confident that they can handle challenges.
2. **High persistence** – they continue working even when tasks become difficult.
3. **Better problem-solving skills** – they look for solutions instead of giving up.
4. **Positive attitude toward challenges** – they see difficulties as opportunities to learn.
5. **Lower stress and anxiety** – because they trust their capacity to manage situations.

Q78. Second Short Question (Based on your memory: most common)

Most likely short questions asked in PSY409 include:

“Three components of Hope”

Answer:

1. **Goals** – clear targets a person wants to achieve.
2. **Pathways thinking** – ability to see different routes to reach goals.
3. **Agency thinking** – motivation and belief that one can follow those pathways.

Q79. Historical Background of Positive Psychology

Answer:

The roots of positive psychology go back to early philosophers like **Aristotle**, who focused on happiness and virtue. In the early 20th century, psychology mainly focused on **mental illness**, influenced by Freud’s psychoanalysis and later behaviorism. After World War II, psychology became more disease-oriented.

In the 1990s, **Martin Seligman** argued that psychology should not only treat problems but also study strengths, virtues, and well-being. He introduced positive psychology officially in **1998** during his APA presidency. This movement emphasized happiness, resilience, optimism, flow, strengths, and meaning. Since then, research has grown globally, forming the scientific study of human flourishing.

Q80. Question with Examples (Self-Esteem, Belongingness, etc.)

You said: "Self-esteem, Belonging, and 3 more."

This looks like **Maslow’s hierarchy examples** OR **psychological needs examples**.

I’ll answer in a 5-mark “examples-based” format.

A. Self-Esteem — Example-Based Answer

Answer:

Self-esteem refers to how positively a person evaluates themselves.

Examples:

- A student with high self-esteem attempts difficult assignments without fear.
- A person accepts mistakes without feeling worthless.
- Someone with healthy self-esteem trusts their decisions instead of needing approval.

Belongingness — Example-Based Answer

Answer:

Belongingness is the need to feel accepted and connected with others.

Examples:

- A person feels valued when their friends invite them to group activities.
- Students feel a sense of belonging when classmates support them.
- Feeling connected in family gatherings increases emotional security.

Q81. Three More Concepts With Examples

I'll give the **three most common concepts** that appear with self-esteem & belongingness:

1. Autonomy (Self-choice) — Examples

- A student chooses their own study method and feels motivated.
- Deciding one's career without pressure boosts confidence.
- Choosing friends freely increases life satisfaction.

2. Competence — Examples

- Learning a new skill and successfully applying it.
- Receiving good marks after hard work.
- Completing tasks efficiently increases confidence.

3. Positive Relationships — Examples

- Talking openly with family reduces stress.
- Having supportive friends improves well-being.
- Helping someone strengthens emotional connection.

Q82. LOT-R Optimism Scale – What It Predicts (Ch17)

Answer:

The LOT-R measures **dispositional optimism**, predicting:

1. Better physical health outcomes.
2. Higher resilience in adversity.
3. Greater goal achievement.
4. Higher life satisfaction.
5. More effective coping strategies.

Examples in daily life:

1. Optimistic student studies regularly → better grades.

2. Optimistic person recovers faster from illness.
3. Optimist persists in job search → gets hired.
4. Optimistic parent handles children's misbehavior calmly.
5. Optimist maintains relationships despite conflicts.

Q83. Upward Spiral of Positive Emotions (Ch7)

Answer:

The **Upward Spiral** shows that experiencing positive emotions repeatedly **builds personal resources**, which then create more positive emotions.

Examples in everyday life:

1. Feeling gratitude → builds stronger friendships → increases happiness.
2. Helping others → increases sense of purpose → more satisfaction.
3. Exercising → boosts mood → motivates healthier habits.
4. Learning new skills → increases confidence → enhances optimism.
5. Practicing mindfulness → reduces stress → increases positive interactions with others.

Q84. Martin Seligman – Three Conceptualizations of Happiness

Answer:

1. **Pleasure/Hedonic Happiness** – based on maximizing positive emotions and minimizing pain.
2. **Engagement (Flow)** – being fully involved in activities using strengths.
3. **Meaning (Eudaimonic Happiness)** – using personal strengths for a purpose greater than oneself.

Hedonic vs Eudaimonic Psychology:

- **Hedonic** – focuses on pleasure, enjoyment, and comfort.
- **Eudaimonic** – focuses on personal growth, fulfillment, and meaning in life.

Q85. Albert Bandura – Method to Increase Self-Efficacy

Answer:

Bandura suggested **4 main sources** to increase self-efficacy:

1. **Mastery experiences** – succeeding in tasks builds confidence.
2. **Vicarious experiences** – observing others succeed.
3. **Verbal persuasion** – encouragement from others.
4. **Physiological & emotional states** – managing stress and anxiety to boost belief in capability.

Q86. Emotional Intelligence (EI) – Properties

Answer:

1. **Self-awareness** – recognizing one's emotions.
2. **Self-regulation** – controlling impulses and emotional reactions.
3. **Motivation** – inner drive to achieve goals.
4. **Empathy** – understanding others' feelings.
5. **Social skills** – managing relationships effectively.

Q87. Three Virtues in Christianity in Early Middle Age

Answer:

1. **Faith** – trust in God and spiritual beliefs.
2. **Hope** – expectation of positive outcomes.
3. **Charity/Love** – kindness and helping others.

Q88. 3 Benefits of Emotional Storytelling (Ch13)

Answer:

1. **Enhances memory** – emotional stories are easier to recall.
2. **Promotes empathy** – understanding characters' feelings improves social understanding.
3. **Motivates action** – inspires behavior change or positive action.

Optional Bonus: Strengthens social connection and communication skills.

Q89. Link between Positive Emotions and Altruism (Ch6)

Answer:

Positive emotions encourage altruism because:

1. **Broaden thought-action repertoire** – happier people think creatively about helping others.
2. **Strengthen social bonds** – positive mood increases willingness to cooperate.
3. **Increase empathy** – noticing others' feelings more easily.
4. **Build personal resources** – confidence and energy to help.
5. **Trigger reciprocal kindness** – happier individuals tend to help expecting mutual support.

Q90. Hope

Hope is the **positive motivational state** that helps a person move toward their goals. According to Snyder, hope has **three main elements**:

1. **Goals** – clear targets a person wants to achieve.
2. **Pathways** – the ability to find different ways or strategies to reach those goals.
3. **Agency** – the motivation and belief that “I can do this” and continue trying even when obstacles appear.

People high in hope stay focused, think of alternatives, and keep themselves motivated. Hope improves coping, problem-solving, and emotional well-being because it encourages forward thinking and confidence.
