IMP MCQs

1) Once a test is ready then next step is to **administer it**.

2) Holistic rubric is probably more appropriate for the ___items. **Essay type**.

3) Multiple test forms should be assembled so that **similar to one another**

4) There are **two** widely perceived theories in psychosocial measurement.

5) There are **two types** of guessing • Blind guessing • Informed guessing.

6) Which type of test items allow the students to determine the length and complexity of the response? **Subjective test items (essay type).**

7) There are **two** general methods for scoring subject-matter essays.

8) Where the examinee draws upon all his knowledge and abilities to choose the answer most likely to be correct, then this type of guessing is called _____ guessing. **Informed**.

9) Item analysis results can be presented **graphically** or numerically.

10) Standardized achievement tests are often customized to include characteristics of both **norm** and criterion referenced test.

11) Which of the following option includes in reproducing the test? **Knowing the photocopying machine.**

12) When an examinee chooses an answer at random from the alternatives offered, then this type of guessing is called _____ guessing. **Blind Guessing**.

13) Which of the following theories is known as latent trait theory? **Item response theory.**

14) In _____ rubric each criterion is assessed separately by using different descriptive ratings. **Analytical scoring**.

15) The item characteristic curve is considered as the _____building block of item response theory. **Basic**

16) An item that has a _____ level of difficulty will be less likely to be answered correctly by an examinee. **High**

17) **Guessing** means giving an answer or making a judgment about something without being sure of all the facts.

18) Standardized achievement tests are typically _____ referenced tests. **Norm**

19) Standardized achievement tests are _____used in the form of survey test batteries. **Frequently**.

20) System of number or values assigned to a work often combines with a level of performance is known as **Score.**

21) Holistic rubric is good for evaluating _____ performance on a task. **Overall**

22) The standardized achievement test items are _____ technical. **Highly**

23) A test form is statistically equated to another test form to make the resulting test scores **comparable**.

24) There are _____ main types of rubrics. **Two**

25) Scoring of essay items is a **time consuming and difficult** process.

26) A rubric is **an explicit** set of criteria used for assessing a particular type of work or performance.

27) Which of the following threats is a major threat to the validity of test score interpretations? **Student's motivation**.

28) Essay type questions are divided into **two types** 1. Restricted Response Items 2. Extended Response Items.

29) **Item discrimination** can be calculated by ranking the students according to total score and then selecting the top 27% and the lowest 27% in terms of total score.

30) The application of Item difficulty in IRT is defined as the ability at which the probability of success on the item is **0.5** on a logit scale, which is also known as threshold difficulty.

31) Item difficulty in ____is simply calculated by the percentage of students that correctly answered the item as refers to the p value which range from .00 to 1.00. **Classical Test Theory (CTT)**

32) **Guessing** is a standard test-taking strategy presented to examinees taking a multiple-choice assessment.

33) A test form is statistically equated to another test form to make the resulting test scores **Comparable.**

34) **Guessing** means giving an answer or making a judgment about something without being sure of all the facts.

35) Synthesis and evaluation are the ___ level skills. **Higher**

36) The standardized tests inflexibility makes it _____ valuable for those purposes for which the informal classroom tests is so admirably suited. **Less**

37) A rubric includes ___ elements in it. **Four**

38) The preparation of test items is greatly facilitated if the items are **properly** recorded.

39) There are **two** widely perceived theories in psychosocial measurement, **classical test theory (CTT) and item response theory (IRT).**

40) The **holistic** scoring rubric requires making a judgment about the overall quality of each student ‘s response to an item.

41) The typical **matching exercise** is limited to measuring factual information, based on simple associations.

42) Short answers are presented in the form of ____ questions. **Direct**.

43) Matching is restricted to measurement of ____ information based on rote learning. **Factual**

44) Why is the below statement of true or false a poor item?

Despite the theoretical and experimental difficulties of determining the exact pH value of a solution, it is possible to determine whether a solution is acid by the red color formed on the litmus paper when it is inserted into the solution……. **Avoid long and complex sentences.**

45) There are **two types** of item formats which are included in the category of supply type: short answers and completion and fill in the blanks, under the range of objective test items.

46) Identifying the relationship between two things is done in _____ items. **Matching items**

47) While creating True/False questions, one should avoid using the statements that are _____ in length. **Unequal**.

48) The matching type exercises consist of **two parallel** columns.

49) While constructing matching exercises, one should place all of the items for one matching exercise on the ____ page. **Same**

50) Short answers are presented in the form of **direct questions** while completion items are statements. **(incomplete)**

51) Subjective test items (essay questions) are constructed response type questions that can be the best way to measure the students' **higher order** thinking skills.

52) P-values below **0.20** are very **difficult items**.

53) In which of the following tests items teacher can control the possibility of the guessing? **(Short Questions)**

54) Short answers, completion and fill in the blanks fall under the range of test items. **(objective)**

55) When completion items are used, blank/s should be used in a stem. (single)

56) The short answer test item is suitable for measuring **a wide** variety of relatively simple learning outcomes.

57) **high stake testing** is conducted at each level from primary to higher secondary.

58) In case of **standardized test**, interpretation can only be made with reference to the constructions on which test was based by the developer.

59) For which test we should take advantage of whatever the material is available. **(High stake testing)**

60) Objective items are easier to **administer (and score)** than subjective items.

61) In Pakistani school which type of exams are taken? **High stake**.

62) In true false statement one should avoid ..... statement. **Trivial/ broad general**.

63) Alternative form of items is most suitable for measuring **lower-level learning** outcomes.

64) Which of following Exercise is used when measuring student's ability to identify the relationship between a set of similar items, each of which has 2 Components? **Matching test items**

65) Indicate the directions the basis for matching the **responses and premises**.

66) Include an unequal number of responses and premises, and instruct the students that **responses** may be used once, more than once, or not at all.

67) A derived score is a **numerical report** of test performance on a score scale that has well-defined characteristics and yields normative meaning.

68) **Classical test** is called as **true score theory.**

69) A raw score is a summary of a student's test performance. **(Numerical)**

70) Avoid including two ideas in one statement unless **cause and effect** relationship are being measured.

71) The major objective of **matching exercise** is its compact form, which makes it possible to measure a large amount of related factual material in a relatively short time.

72) Alternative form of items is most suitable for measuring **lower**-level learning outcomes.

SUBJECTIVE

Two types of guessing?

Guessing is when a student chooses an answer without knowing it, usually in multiple-choice or true–false questions. There are two types of guessing:

i. **Blind guessing:** When a student has no idea about the answer and just picks any option randomly.

ii. **Informed guessing**: When a student is not fully sure, but uses what they know or remember to choose the answer that seems most correct.

uses of true and false?

1) To check basic knowledge of students
2) To see if students understand facts or concepts
3) To test quick learning in a short time
4) Useful for large classes because they are easy to mark
5) Helps in checking simple concepts and definitions
6) used to measure students' understanding of cause-and-effect relationships between statements.

Two types of essay type items? OR Types of essay question?

- **Restricted Response Items**: Require short, specific answers on a focused topic.
- **Extended Response Items:** Allow long, detailed answers and test higher-order thinking.

psychosocial theory name?

- Classical test theory (CTT)
- item response theory (IRT)

Five Suggestions for Constructing Matching Exercise?

1) Use only one type of content in one matching question.
2) Give more options than questions and tell students that options can be used once, many times, or not used.
3) Keep the list short, and put the shorter answers on the right side.
4) Arrange the answers in a clear order (words in A–Z order, numbers in order).
5) Give clear instructions about how the matching should be done.

What are the Advantages of essay type items?

1) Good for assessing higher-level learning (analysis, evaluation).
2) It is comparatively less time consuming to develop such items.
3) Emphasizes essential communications skills
4) Guessing is eliminated.
5) They allow students to explain ideas in their own words

6) They test deep understanding, not just memory
7) They help check thinking, analysis, and reasoning skills
8) Useful for testing creativity and writing ability

Limitations of essay type items?

1) The scoring is unreliable.
2) Limited sampling of the content is possible.
3) They take more time to answer
4) Checking essays is time-consuming
5) Marking can be subjective (different teachers may give different marks)
6) Not suitable for large classes

What is a raw score?

A raw score is a numerical summary of a student ‘s test performance, it is not very meaningful without further information.

- A raw score is simply the number of points received on a test.
- —0‖ in raw scores does not mean absence of trait.

Structure of short questions?

Short answers are presented in the form of direct questions while completion items are incomplete statements.

- The question should be clear and specific
- It should ask for a short and exact answer
- Only one idea should be tested in one question
- The wording should be simple and direct
- There should be no unnecessary information
- The expected answer should be clearly defined

Limitations of matching exercise?

1) It is restricted to the measurement of factual information, based on rote learning.
2) Students may guess the answer because of extra or hidden clues.
3) It is hard to find similar (homogeneous) and important content that matches the learning objectives and outcomes.
4) Not suitable for testing higher-level thinking skills.
5) Limited use when content is complex or descriptive.

Advantages of Matching Exercises?

1) They can test many items in a short time
2) Easy and quick to mark
3) Useful for large classes
4) Reduce guessing compared to true/false questions
5) Good for checking facts, terms, and relationships
6) Clear and objective scoring

What are short answers and completion items?

The short answer and completion items are forms of "supply" items both are supply type test items that can be answered by a word, phrase, number or symbol. Short answers are presented in the form of direct questions while completion items are incomplete statements. Such items are frequently used for measuring knowledge of terminology, specific facts, principles and procedures etc.

Example:

Short Answer: What is the name of man who invented the light bulb? (Thomas Edison)

Completion: The name of the man who invented the light bulb is _____.

This category includes the problem in arithmetic, mathematics science and other areas whose solution must be supplied by the students

Advantages of Analytic Rubric?

i. Shows detailed feedback on different skills or parts of work
ii. Helps teachers score fairly and consistently
iii. Students know exactly what is good and what needs improvement
iv. Useful for complex tasks with multiple criteria

Disadvantages of Analytic Rubric?

- Takes more time to create and score
- Can be complicated for students to understand
- Might limit creativity if too strict
- Needs careful wording to avoid confusion

Limitations of short answer/completion questions?

1) Mostly test facts or memory, not deep understanding
2) Can be guessed if students know part of the answer
3) Time-consuming to mark in large classes

4) Limited use for complex or higher-level thinking
5) Answers must be exact, so small mistakes can lose points

Advantages of short answer/completion questions?

a) They are quick to answer
b) Can test specific facts or knowledge
c) Reduce guessing compared to multiple choice
d) Useful for checking recall and understanding
e) Easy to create for teachers

Suggestions for scoring constructed response questions?

(1) Plan the answer before marking.
(2) Use the best scoring rubric for the question.
(3) Ignore things that are not part of what you are testing.
(4) Mark all answers for one question before moving to the next.
(5) Mark without seeing the student's name if possible.
(6) For important decisions, get two or more people to mark independently.

Learning outcomes from essay questions?

Variety of learning outcomes can be checked by using this format of essay question. Some of which are;

1) Analysis of relationship.
2) Compare and contrast positions.
3) Explain cause-effect relationship.
4) Organize data and support a viewpoint.
5) Formulate hypotheses.
6) Point out strengths and weaknesses.
7) Integrate data from various resources.

Institutions involve in assessment?

- Examination commission
- Board of intermediate and secondary education (BISEs)
- Board of Technical Education
- National Education Assessment System (NEAS)
- Provincial Education Assessment Centre (PEAS) in KPK and Sindh
- Examination Commission (Punjab and Baluchistan)

Scope of Examination Bodies?

a) Examination commission conduct examination at grade 5 and 8 level
b) BISEs hold SSC and HSSC annual examinations
c) Boards of Technical Education conduct examination of various diplomas and certificates etc.

difference between scoring rubric and scoring criteria?

Scoring criteria are the things teachers plan in advance to decide what to look for in students' answers, which helps make questions clearer and the assessment fairer and more reliable. It Covers individual parts of the task.

A scoring rubric is a detailed guide that uses these criteria to assess a task, giving more information than just a grade. It Covers the whole task. Rubrics describe the level of performance in clear words rather than just judgmental terms like "excellent." For example, instead of saying "excellent," a rubric can say "writing is clear and thoughts are complete" so students and teachers both know what is expected.

What are Basic Steps to design Rubric?

- Identify a learning goal.
- Choose outcomes that may be measured.
- Develop or adapt existing rubric.
- Share it with students.

What are Elements of Rubric?

1) **Score:** A number or value given to a student's work. High numbers (like 4–6) = best work, low numbers (like 0–1) = poor work.

2) **Criteria:** The things we are checking (like accuracy or clarity), with examples so it's clear.

3) **Level of Performance:** Words that describe how well the student did (like excellent, good, poor).

4) **Descriptors:** Details for each level that help teachers mark fairly and clearly.

types of rubrics?

- the analytic Rubric (scoring key, point or rating)
- the holistic Rubric (also called global, sorting or rating).

Item Difficulty in Item Response Theory (IRT)?

In Item Response Theory (IRT), item difficulty shows the ability at which the probability of success on the item is .5 on a logit scale, which is also known as threshold difficulty.

- A hard item (high difficulty) is less likely to be answered correctly by a student with low ability.
- An easy item (low difficulty) is more likely to be answered correctly by most students.

What are the things that we measure in reading test?

- Vocabulary
- Reading comprehension
- Rate of reading

short note on matching column? OR Matching Exercises?

Matching-type exercises consist of **two columns**, where the first column has **premises** (such as words, dates, people, or symbols) and the second column has **responses** (like definitions, events, accomplishments, or meanings). Students are asked to match each item in the first column with the correct item in the second column. These exercises are used to measure a student's ability to identify relationships between related items. They are efficient and economical when there is enough factual information, and each item in the exercise has two components with only one correct match.

What are three important points for reminding students to check their answer copies during invigilation?

- Ensure all questions have been attempted.
- Review answers for possible mistakes.
- Verify that their personal details are correctly filled in.

What is Test administration and its issue?

Test administration is the process of giving a test to students in a planned and organized way.

- Cheating
- Poor testing conditions
- Test anxiety
- Errors in test scoring procedure

Difference between Criterion referenced and norm referenced interpretation?

Criterion-referenced interpretation evaluates a student's performance based on a fixed set of standards or learning objectives rather than comparing them to others. It focuses on what a student knows or can do. It is Often used in classroom tests, competency exams, or skills assessments. For example, if a student scores 80% on a math test and the passing standard is 70%, the student has met the required standard.

Norm-referenced interpretation evaluates a student's performance by comparing it to the performance of a group of peers. It focuses on relative ranking. It is b Often used in standardized tests, IQ tests, or college entrance exams. For instance, if a student is in the 90th percentile on a standardized test, it means they performed better than 90% of the other students.

Explain Holistic rubric?

A holistic rubric gives one overall score for a student's answer instead of scoring each part separately. It is best for essay-type questions where students need to think, create, or explain, and there is no single correct answer. Teachers can use it in different ways:

1) **Decide categories first:** For example, "Excellent," "Good," "Fair," "Poor."
2) **Describe each category:** Explain what makes an answer "Excellent" or "Good."
3) **Use sample papers:** Compare a student's paper with example papers for each category.
4) **Rank all papers:** Read all answers and put them in order from best to worst (only works for a small number of papers).

- The first three ways are **criterion-referenced** (based on standards).
- The last way is **norm-referenced** (based on how other students did).

discuss steps of packaging of test?

1) Grouping together items of similar format
2) Arranging test items from easy to hard
3) Properly spacing items
4) Keeping items and options on the same page
5) Position illustration near description (if diagram given)
6) Randomness of answer key
7) Determine how students record answers (separate sheet or same sheet)
8) Providing space for test taker 's details
9) Proofread the test (typographical and grammatical error)
10) Test directions

Define distractor?

Distractors are wrong answers that look possible. Their purpose is to check whether students really understand the topic, reveal common mistakes students make, and to stop students from guessing easily.

Advantages of Alternative Form (True-False)?

i) Identify the correctness of factual statements, e.g. Earth is a planet.

ii) Definition of terms e.g. Photosynthesis is the process by which leaves make food for plants.
iii) Statement of principles, e.g. Earth is revolving around the sun.
iv) Distinguish facts from opinion, e.g. Islam is the official religion of Pakistan.
v) Recognize cause-and-effect relationship

Limitations of True-False?

1) True–false questions cannot measure all learning outcomes and are mostly limited to lower-level learning.
2) There is a high chance of guessing because students choose between only two options (true or false).
3) A student may guess correctly even without knowing the answer.
4) Teachers may copy sentences from the textbook with only small changes in wording.
5) Sometimes trivial or unimportant content is included.
6) Due to high guessing and limited depth, true–false items are mainly used to measure basic knowledge only.

Item Difficulty in Classical Test Theory (CTT)?

Classical Test Theory (CTT) does not use complex formulas or models; instead, it focuses on how many students answer a test item correctly. The success rate of students on an item is called the **p-value**, and this value is used to show the difficulty of the item. In CTT, item difficulty is the proportion of students who answered the item correctly, and the p-value ranges from 0.00 to 1.00. A p-value close to 1.00 means the item is easy, while a value close to 0.00 means the item is difficult. When the p-value lies between 0.40 and 0.60, the item is considered to have moderate difficulty.

For example, if 80 out of 100 students answer an item correctly, the p-value is calculated by dividing 80 by 100, which equals 0.80. This shows that the item is easy. To calculate item difficulty in CTT, we simply divide the number of students who answered correctly by the total number of students who attempted the item.

Ideal Difficulty

- The best item difficulty is **slightly above the middle value**,
- It should be higher than guessing chance but lower than a perfect score.

Guidelines for Writing Essay Type Items?

1) Write questions clearly so students know exactly what to do.
2) Mention the marks and time limit for each question.
3) Do not give optional questions.

4) Ask more short-answer questions instead of a few long ones.
5) Check the quality of a question by writing a sample answer yourself.
6) Make a marking guide before checking students' answers.
7) Mark all answers of one question first, then move to the next question.
8) Decide in advance how to treat spelling and punctuation mistakes.
9) Check essay answers without knowing the student's name (anonymous marking).

Explain Uses of Short Answer/Completion Questions?

1) Test a student's knowledge of facts.
2) Check understanding of definitions, terms, or key concepts.
3) Evaluate specific learning outcomes quickly.
4) Useful for covering a large amount of content in a short time.
5) Can be used to check understanding of principles, formulas, or processes.
6) Can be used for simple data interpretation and arithmetic problems
7) Can be used for testing knowledge in mathematics and science
8) Useful for measuring knowledge of terminology, facts, principles, and procedures

What is Standardized Achievement Test?

An achievement test measures how much students have learned in a specific subject area. Standardized achievement tests have fixed questions, clear instructions for administration and scoring, and norms based on large groups. They can be norm-referenced or criterion-referenced and are often used to measure broad learning goals.

Most publishes achievement test are called standardized achievement tests. These typically are norm referenced tests. Quite a few criterions referenced achievement tests are also been published.

Time warning and test collection Procedure?

(i) Half time
(ii) 2/3 time
(iii) 30, 15 and 5 min reminder
(iv) Use minimum words to announce time warning
(v) Give time to close
(vi) Announce ―stop writing‖
(vii) Collecting test in reverse order of distribution

What are important points for Monitor students (test invigilation)?

1) Penalties of cheating
2) Disturbing others

3) Seating position/posture
4) Protecting test from others
5) Cheating material handing
6) Jurisdiction of invigilation staff

methodological properties of an ICC?

a) **Difficulty:** Shows where an item works on the ability scale. Easy items are answered correctly by low-ability students, and hard items by high-ability students.
b) **Discrimination:** Shows how well an item tells apart low-ability and high-ability students.
c) **Item Characteristic Curve (ICC):** A graph that shows the chance of answering an item correctly at different ability levels.

What are Recording test items?

For each test item, a record should be kept on a card or document that includes important details. This record contains the instructional objectives, the specific objective the item measures the difficulty index, the discrimination index and the content area covered by the item. Keeping this information helps track the quality of test items and ensures consistency in assessing learning outcomes.

What are the Characteristics of Standardized Achievement Test?

1) The test questions are high-quality and carefully made by experts. They are pretested and chosen based on difficulty, ability to tell students apart, and how well they fit the test rules.
2) Instructions for giving and scoring the test are very clear, so everyone follows the same procedure.
3) Norms from a national sample of students in the same grade are provided to help understand the scores.
4) Equivalent forms of the test are usually available, with information about how similar the forms are.
5) A test manual is provided to guide teachers on how to give the test, check its quality, and interpret the results.

How can a teacher maximize achievement motivation?

i. Encourage to do best, mitigate the fear
ii. Highlight value of giving best
iii. Reduce panic
iv. Encourage serious thinking

Difference between standardized tests and class test? Difference between standardized tests and class test?

Standardized tests have high-quality test items prepared by experts, while class tests are usually made by teachers and may vary in quality. Standardized tests are more reliable because they are carefully tested, whereas class tests are less reliable. The procedure for administering and scoring standardized tests is fixed and the same for everyone, but class tests are administered and scored according to the teacher's choice. Scores of standardized tests are interpreted using norms or standards, while class test scores are interpreted based on classroom performance. Standardized tests measure broad learning outcomes and content, whereas class tests focus on specific topics taught in class.

What are NEAS and Objectives of NEAS?

National Education Assessment system (NEAS) works for promoting quality learning among children of Pakistan by carrying out fair and valid national assessment. The National Education Assessment System (NEAS) was established in 2003 at the national level with support from the World Bank and DfID. It works under the Ministry of Federal Education. Every year NEAS conduct large scale assessment at primary and elementary level. The content areas it usually covers are reading and writing of language, mathematics and science

Objectives:

1) Informing policy
2) Monitoring standards
3) Identifying correlation of achievement
4) Directing teachers'efforts and raising students' achievement

Common statistics of IRT?

i. **Item difficulty:** Shows the proportion of students who answered the item correctly.
ii. **Item discrimination:** Shows how well the item distinguishes between students who know the content and those who don't.
iii. **Distractor analysis:** Checks how well the wrong answer choices (distractors) work in the question.

Suggestions for Constructing Short Answer/Completion Questions?

i. Write the question so the answer is short and specific.
ii. Do not copy sentences directly from textbooks.
iii. A direct question is better than an incomplete statement.
iv. If the answer is a number, mention the units.
v. For completion (fill-in-the-blank) questions, avoid too many blanks or starting with a blank.
vi. Do not ask trivial or unimportant information in blanks.

How can true-false items test both cause-effect relationships and logic?

True–false items can test both cause-effect relationships and logic because the statement can show a situation and its result, or a reasoning process. For cause and effect, the statement presents that one thing leads to another, and the student decides if it is true, such as *"Rain causes plants to grow."* For logic, the statement tests whether the student can follow reasoning or rules, like *"All squares are rectangles, so all rectangles are squares,"* which is false. In both cases, the student must understand the connection between ideas, not just memorize facts.

What is the Item Characteristic Curve (ICC) in Item Response Theory (IRT)?

The Item Characteristic Curve (ICC) is a graph used in Item Response Theory that shows how the probability of answering an item correctly changes with a student's ability level. It explains how difficult an item is how well it distinguishes between high- and low-ability students and the chance of getting the item right by guessing.

strategies to solve issue in test administration?

To ensure tests give accurate and reliable results teachers should manage factors beyond the test itself. Three key strategies are:

- **Create a positive test environment:** Help students feel calm and confident by encouraging a good attitude explaining rules clearly and reducing distractions.
- **Prevent cheating and errors:** Remind students to check their work monitor for cheating and ensure proper scoring procedures are followed.
- **Manage time and instructions:** Give clear time warnings and guidance so students can complete the test without confusion or anxiety.

Score definition?

A score is a number or value given to a student's work to show the level of performance. Higher numbers (such as 4, 5, or 6) indicate better performance while lower numbers (like 1 or 0) show weak or poor performance.

What are five recommendations for effective high-stakes testing?

1) Protection against high stake decisions based on single test
2) Adequate resources and opportunity to learn
3) Validation for each intended separate use
4) Full disclosure of likely consequences
5) Alignment between test and curriculum
6) Validity of passing scores and achievement levels
7) Appropriate attention towards language difference between examinees

Criteria Most Desired in Norms?

a) Normal.
b) Representative
c) Up to date.
d) Comparable.
e) Adequately described

High Stake Testing in Pakistan?

In school education in Pakistan, high stake testing is conducted at each level from primary to higher secondary.

- Grade 5 and 8 examinations by Punjab Examination Commission.
- Grade 10 and 12 examinations by BISEs

Test construction in High Stake testing?

- The format of items is same as used in CRT in classroom
- Item of developed by professional employed in dedicated organization
- Item banks are developed
- Psychometric properties of item are tested
- The process goes on round the year

Which Things to remember when administering test?

1) Maintain a positive attitude
2) Maximize achievement motivation
3) Equalize advantages
4) Avoid surprises
5) Clarity the rules
6) Rotate distribution
7) Remind students to check their copies
8) Monitor students
9) Minimize distributions
10) Give time warning

Item Discrimination in Item Response Theory (IRT)?

In Item Response Theory (IRT), item discrimination refers to how well a test item can distinguish between students with high ability and those with low ability. Some items are better than others at making this distinction. This property is shown by the steepness of the item characteristic curve, where a steeper curve means the item discriminates better between high- and low-ability individuals.

Best of Luck and Remember me in your precious Prayers
