ENG520

By niMma mAlik

Mids

Acronyms

Structure of observed learning outcomes (SOLO)

Depth of Knowledge (DOK)

Criterion Referenced Assessment (CRT)

Norm Referenced Assessment (NRT)

IMP MCQs

1. Which of the following objectives describes the intended outcome of your instruction rather than a description or summary of your content? **Instructional Objectives**

2. Which of the following is concerned with the ability to judge the value of the material for a given purpose? **Evaluation**

3. Which of the following assessments is used when we want to assess student ‘s prior knowledge so that we can decide what is the level of student?? **Placement Assessment**

4. Which of the following assessments measures the students ‘performance according to relative position in some known group? **Norm-referenced Assessment**

5. Which of the following tests is used for the admission in a particular program? **Aptitude tests**

6. Which of the following is the process of making a value judgment against intended learning outcomes to decide the quality and extent of learning? **Evaluation**

7. The taxonomy of Structure of Observed Learning Outcomes (SOLO) was initially developed by **Biggs and Collis** in 1982.

8. Assessment can be classified in **four** ways.

9. Assessment and Evaluation exist in a hierarchy. **(FALSE)**

10. In **per-structural** students are simply able to acquire bits of unconnected information and respond to a question in meaningless way.

11. Which of the following is defined as the ability to grasp the meaning of the material? **Comprehension**

12. Which of the following assessments determines what individual can do when performing at their best? **Maximum Performance**.

13. Exhibit memory of previously learned material by recalling facts, terms, basic concepts, and answers is known as **Remembering**.

14. Systematic collection of students' work into portfolios can serve a variety of **instructional** and **assessment purposes**.

15. Which of the following is considered the key learning area for the students in the national curriculum of Pakistan? **Competency**.

16. Which of the following assessments comes at the end of the instructional session (course of unit)? **Summative Assessment**

17. List, enlist, name and define are the keywords that are used in **recall** level of Depth of Knowledge (DOK).

18. Which of the following assessments is done at the end of the term? **Summative**.

19. In Bloom ‘s taxonomy, there are **three** main domains of learning.

20. In national curriculums of Pakistan, learning of student is classified into **four** levels.

21. Bloom ‘s Taxonomy was presented by **Benjamin Bloom** in the **1956**.

22. Which of the following is the process by which the attributes of objects are quantified? **Measurement**

23. Which of the following assessments is done through quizzes, class tests and group discussions? **Periodic/formative assessment**.

24. Anecdotal Records are **subjective** in nature.

25. The questions are grouped by keeping in view the responses of respondents on the questions are known as **factor analysis**

26. A test is **objective** when it makes for the elimination of the scorer’s personal opinion bias judgment.

27. **Inter-rater method** is a measure of consistency of ratings.

28. Which of the following characteristics determines if a test is measuring what it is intended to measure? **Validity.**

29. There are **three** evidences of validity.

30. Validity is a matter of **degree**.

31. Reliability is primarily **statistical** in nature.

32. Which of the following testes is designed to assess the developmental condition of an individual? **Readiness Test.**

33. There are **two** methods to confirm construct validity of a test.

34. Validity involves an overall evaluative **judgment**.

35. Reliability is necessary but not sufficient condition for validity. **(TRUE)**

36. A correlation coefficient is a **numerical** representation of the relationship between the two variables.

37. Consistency over period of time is known as **Stability**.

38. Which of the following tests measures a developed skill or knowledge? **Achievement Test.**

39. Many outcomes in the cognitive domain, such as those pertaining to knowledge, understanding, and thinking skills, can be measured by **paper pencil tests**.

40. In determining reliability, it is desirable to obtain two sets of measures under **identical** conditions and then to compare the results.

41. When the sample of sufficient size is available to review the performance of test takers of different races and ethnic groups is known as **fairness**.

42. In which of the following tests, no prior knowledge is assumed, as the tests seek to determine innate ability at a particular competency? **Aptitude Test.**

43. While constructing multiple choice items, the correct alternative in each item is called **answer**.

44. Which of the following is one of the most widely applicable test items for measuring knowledge and achievement? **MCQs.**

45. Split half reliabilities tend to be **higher** than equivalent form reliabilities.

46. **MCQs** can be used to measure the much more complex nature of knowledge.

47. The **anecdotal** records are factual descriptions of incidents and events that a teacher observes.

48. Anecdotal records are beneficial for students with **less** communication skills.

49. **MCQs** reduces the risk of guessing the correct answer.

50.. Within **objective** type items there are: true-false, short answer, multiple choice items, and matching exercises.

51. In which of the following procedures, students rate their peers on the same rating device used by their teacher? **Peer appraisal**.

52. Multiple choice items consist of **two** parts. **1)A Stem 2) No. of options or alternatives.**

53. **Knowledge of principle** is an important learning outcome in most school subjects.

54. **Split half method** is a measure of internal consistency.

55. Kuder- Richardson methods and **Coefficient Alpha** is also a measure of internal consistency.

56. **MCQs** are easy and rapid to score.

57. There are **two** widely used techniques in this area are: 1. Guess who 2. Sociometric.

58. The **anecdotal** records depict actual behaviors in natural situations.

59. The list of suggested solutions which may include words, numbers, symbols or phrases are called **alternatives**.

60. Fundamentally, two **global** purposes for creating portfolios of students work: for student 's assessment and instruction.

61. MCQs reduces the risk of guessing the correct answer. **(TRUE)**

62. How many types of educational decision? **Eight**.

63. Why did Britishers settled in India? **For wealth**.

64. All distractors should be **plausible**.

65. The purpose of distractor is to **confuse the uniformed**.

66. **Instructional decisions** are the nuts-and-bolts types of decisions made in the classroom by teachers.

67. **Criterion Referenced Assessment (CRT)** test tells us about student's level of proficiency in or mastery of some skill or set of skills.

68. NRT tends to be **general**.

69. CRT tends to be **specific**.

70. In **Meaning of Success Basis**, In CRT, an examinee is classified as a **master or non-master**.

71. **Placement Decisions** determine where in a program someone is the best suited to begin with.

72. **Norm Referenced Assessment (NRT)** Type of test which tells us where a student stand compared to other students.

73. Formative assessment is conducted **periodically** during the instructional process.

74. Clear stem increases the probability of the item as well as **reduce** the reading time required.

75. All alternatives should be **grammatically** consistent with the stem of item.

76. An item should contain only **one** correct or clearly best answer.

77. All distractors should be **plausible**.

78. **MCQs** can be used to measure the much more complex nature of knowledge.

79. **Content validity** is the most important factor in constructing an achievement test.

80. Why is the below item being a poor item? Pakistan borders on: a) India b) Tajikistan c) Saudi Arabia d) China **(two correct answers)**

81. **MCQS Items** Take long time to construct in order to avoid arbitrary and ambiguous questions.

SUBJECTIVE

What is Inter-Rater Method?

The Inter-rater Method measures the consistency between two or more different people (raters) who are independently scoring the same piece of subjective work like an essay. It ensures that the score is based on the quality of the work and not just the opinion of a single person.

ENG520

Bloom's Taxonomy of Learning Objectives?

Bloom 's Taxonomy was presented by **Benjamin Bloom in the 1956**, consists of a framework with most common objectives of classroom instructions.

1) Cognitive
2) Affective
3) Psychomotor

Characteristics of Good Test?

1) **Validity:** A test is valid when it measures what it is supposed to measure
2) **Reliability:** A test is reliable when it gives consistent results every time it is used.
3) **Usability:** A good test should be practical and easy to give, easy to score, and the results should be available in a useful way for decision making.

Explain Formative and summative assessment? Or Write the uses of Formative assessment?

Formative Assessments:

Formative assessment helps us check students' learning during the lesson. It gives feedback so we can improve teaching and fix learning mistakes. In this type of assessment, we don't judge how much students have learned; instead, we check how they are learning. We look at the teaching method, the book, and other things to see if they match students' needs. If we improve these things, students' learning will also improve.

Examples:

- Class quizzes
- Feedback during lessons
- Asking questions

It provides feedback to teachers:

- About weakness and strength of learning process
- To modify their teaching practices

- To improve teacher-learning process

It also helps students to reflect on their weaknesses and encourages them for their successful learning. Formative assessment provides feedback to students who are struggling with a specific content area or concept. The main difference between formative and summative assessment is that the in formative assessment, improvement is in the process of learning rather than to certify students. We use different **tools f**or formative assessment and it includes teacher made tests, custom made tests from textbook.

Summative Assessment:

Summative assessment happens at the **end of a unit or course**. It is used to check how much students have achieved and whether they reached the learning goals. Its main purpose is to give grades and judge students' level of mastery in a subject. Teachers often use tests, exams, portfolios, or other tasks to measure overall performance at the end. It doesn't have to be only at the end of the semester—midterm and final exams are also summative assessments. It usually compares a student's performance either with other students (norm-referenced) or with a set standard (criterion-referenced). Summative assessment can include teacher made survey test, performance, rating scales and product scales.

Examples:

- Final exams
- End-of-term tests
- Projects
- Standardized tests

Major Elements of Table of Specification?

Carey (1988) listed **six major elements** that should be attended to in developing a table of specifications for a comprehensive end of unit exam:

1) Balance among the goals selected for the exam (weighing objectives)
2) Balance among the levels of learning (higher order and lower order)

3) The test format (objective and subjective)
4) The total number of items
5) The number of test items for each goal and level of learning
6) The enabling skills to be selected from each goal framework.

Nature of Validity and Reliability?

Nature of Validity:

1) Appropriateness of the interpretation of the results
2) Validity is a matter of **degree**
3) Validity is specific to some particular use or interpretation
4) Validity is a unitary concept
5) Validity involves an overall evaluative **judgment**

Nature of Reliability:

1) Reliability refers to the consistency of measurement.
2) Reliability refers to the results obtained with an assessment instrument and not to the instrument itself.
3) An estimate of reliability always refers to particular type of consistency (stability, equivalence, internal consistency)
4) Reliability is necessary but not sufficient condition for validity. • Reliability is primarily **statistical (range +1 and -1).**

Difference between Validity and Reliability?

Validity

Validity refers to the **accuracy** of a test. It tells us whether the test is actually measuring what it is intended to measure. A valid test focuses on the correct skill or ability.

For example, if the purpose of a test is to assess speaking skills, then the tasks and items should directly measure speaking—not grammar, writing, or reading. In short, validity answers the question: **Is the test measuring the right thing?**

Reliability:

Reliability refers to the **consistency** of a test. It tells us whether the test gives stable and similar results when repeated under the same conditions. A reliable test produces dependable outcomes no matter when or who administers it.

For example, if a student takes the same test twice and the scores are nearly the same, the test is reliable. In short, reliability answers the question: **Is the test measuring the thing consistently?**

In Bloom's taxonomy, what are the Three main domains of learning?

i. Cognitive Domain
ii. Affective Domain
iii. Psychomotor Domain

Why did Britishers settled in India? OR why was India prioritized for settlement by the British?

India was prioritized because it was **rich in resources**, had a **huge population for trade**, and was geographically important for controlling routes in Asia. The British settled in India mainly to **increase their trade, gain wealth, and establish political control**. India had rich resources. Its wealth (spices, cotton, tea, textiles) and strong trading ports made it extremely **profitable**, so the British focused on settling and expanding power there.

Levels of SOLO?? OR Structures of SOLO?

1) **Pre-structural** – Irrelevant or no understanding.
2) **Uni-structural** – Understands one relevant aspect.
3) **Multi-structural** – Understands several aspects, but not connected.
4) **Relational** – Integrates ideas into a coherent whole.
5) **Extended Abstract** – Applies learning in abstract, generalized ways.

What are Three popular Taxonomies? OR write the names three taxonomies of educational objectives and assessment?

1) Bloom 's taxonomy of educational objective
2) Structure of Observed Learning Outcomes (SOLO)
3) Depth of Knowledge (DOK)

ENG520

What are Two types of peer Appraisal? OR What is Peer Appraisal?

In this procedure students rate their peers on the **same rating device** used by their teacher. It depends on greatly simplified procedures.

Techniques of peer appraisal:

- Guess who
- Sociometric

What are the Advantages of MCQs?

1) Ensure objectivity, reliability and validity; preparations of questions with colleagues provide constructive criticism.
2) MCQs help check many topics quickly.
3) They can also check thinking and understanding clearly.
4) MCQs give good information about what students know.
5) MCQs are very easy and **rapid to score**.

What are the Limitations of MCQs?

- They take a long time to make so the questions are not random or confusing.
- They need careful planning so the test does not only ask students to memorize facts.

Why did Britishers settled in India?

a) For adventures
b) For wealth
c) For lower taxes
d) For religious freedom

Identify the correct answer and explain either a poor or better item??

The correct answer is: **b) For wealth** ✅ This is a **better item** because it has:

- Clear stem
- Only one correct answer

- ❖ Plausible distractors
- ❖ No grammatical clues

Five types of educational decision taken by board and government?

1) Instructional
2) Grading
3) Diagnostic
4) Selecting
5) Placement
6) Counseling and Guidance
7) Program or Curriculum
8) Administrative

What are the Key steps in defining and using portfolios?

- Specify purpose
- Provide guidelines for selecting portfolios
- Define student ‘s role in selection and self-evaluation.
- Specify evaluation criteria.
- Use portfolios in instruction and communication.

What are the advantages of anecdotal records?

1) It depicts actual behaviors in natural situations.
2) It facilitates gathering evidence on the events that are exceptional but significant.
3) It is beneficial for the students with less communication skills.

What are the Limitations of anecdotal records?

- It takes long time to maintain.
- It is subjective in nature.
- Anxiety may lead to wrong observation.

Two Modes of Assessment in Curriculum?

1) Periodic/formative assessment through homework, quizzes, class tests and group discussions.

2) End of term/ summative assessment through final examination.

Explain Selection and placement design?

Selection Decisions:

Selection decisions involve test data used in part for accepting or rejecting applicants for admission into a group, program, or institution. **For example**, a school may give a short test to see which students can join a computer class — this is the selection part.

Placement Decisions:

Placement decisions are made after an individual has been accepted in a program. They determine where in a program someone is the best suited to begin with. **For example**, students are divided into beginner, intermediate, or advanced groups based on their test results — this is the placement part. Selection ensures the right people join, and placement ensures everyone learns at the level that is best for them.

Types of subjective tests?

i. Restricted Response Items
ii. Extended Response Items

Write the names of different published tests?

The two most value to the **instructional program** is:

i. Achievement tests
ii. Aptitude tests

In classrooms most used published tests are:

- Achievement tests
- Reading test

Published tests commonly used by **provincial or national testing programs** are:

♣ Aptitude tests

♣ Readiness tests

♣ Placement tests

Explain Placement Assessment?

Placement assessment checks what students already know before starting a course. It helps place them in the right class or level. It includes tests like readiness tests, aptitude tests, and pretests. In the classroom, placement assessment helps the teacher see each student's **level of knowledge and skills**. Based on this, the teacher can **plan lessons** that match the students' level and needs. It also shows the student's interest and aptitude in a subject, which helps guide them toward the **right path for the future**.

Examples:

- Readiness test
- Aptitude test
- Pretest
- Self- report inventories

Pakistan shares the borders with which country

a) **China**
b) **India**
c) **Tajikistan**
d) **Saudi Arabia**

Identify the correct answer and explain either a poor or better item??

the correct options are**: China and India**. This MCQ is a **poor item** because:

1) The stem expects ONE correct answer, but there are TWO correct answers.
2) One distractor (Tajikistan) is confusing and misleading.
3) One distractor (Saudi Arabia) is irrelevant.
4) The stem is incomplete.

Explain Evidences of Validity: Criterion Validity? OR What is Concurrent of validity?

Criterion Validity:

Criterion validity refers to how accurately a test's results match another test that is already known to be valid. Types of Criterion Validity:

1) **Concurrent Validity:** The test is compared with an already valid test at the same time to show that it measures the same thing.

Example: A teacher creates a new English vocabulary test. Students take the new test and on the same day they also take a standard vocabulary test. If the scores of both tests are very similar, the new test has high concurrent validity.

2) **Predictive Validity**: The test is given now, and its results are compared with performance measured in the future to see how well it predicts later outcomes.

Example: College Admission Test: A university entrance test is given to students. Later, their first-year GPA is checked. If students who scored high on the test also performed well in college, the test has predictive validity.

Levels of Depth of Knowledge (DOK)?

DOK (Depth of Knowledge) was presented by **Webb in 1997**, giving **four levels** of learning activities.

1) **Recall:** Simple recall of facts (e.g., define, list).
2) **Skill/Concept:** Application of concepts or procedures (e.g., compare, summarize).
3) **Strategic Thinking:** Reasoning, planning, using evidence (e.g., analyze, critique).
4) **Extended Thinking:** Complex reasoning over time (e.g., design, synthesize, reflect).

Write four levels in which learning of students is classified OR Role of National Curriculum in Assessment?

1) Competency

2) Standards
3) Benchmarks
4) Student learning outcome (SLOs)

Define competency?

Competency means having the knowledge, skills, and abilities needed to perform a task effectively.
It shows how well a person can do something. It is a **key learning area**, for example, algebra, arithmetic, geometry, etc. in mathematics and vocabulary, grammar, composition, etc. in English.

Explain Evidences of Validity: Construct Validity?

Construct validity means checking whether a test truly measures the specific idea it claims to measure. For example, if a test is made to measure depression, it should measure only depression not similar things like stress or anxiety.

Procedure

Develop a test framework;

- ♣ Defining construct
- ♣ Identifying sub-constructs
- ♣ Listing indicators of each sub-construct
- ♣ Writing test items for each indicator

What are two methods to confirm construct validity of a test?

1) **Expert Judgment**: Experts in the field review the test and evaluate whether it truly measures the construct.
2) **Factor Analysis**: Test items are grouped based on examinees' responses to see whether they reflect the intended construct.

What is Split Half Method?

Split half method is a measure of **internal consistency**. Split half reliabilities tend to be **higher than** equivalent form reliabilities because split half method is based

on the administration of single assessment. The split- d is a way to check how reliable a test is by dividing it into two parts and comparing the results. You take one test and split it into two equal halves, like odd-numbered questions in one half and even-numbered questions in the other. You score both halves separately. If the scores on both halves match closely, it means the test is consistent and reliable. The Spearman Brown formula is then used to adjust the reliability score for the full test.

What are the Methods of Interpreting Results?

- Norm Referenced Assessment (NRT)
- Criterion Referenced Assessment (CRT)

Types of Summative Assessment?

1) Examinations (major, high-stakes exams)
2) Final examinations (a truly summative assessment)
3) Term papers (drafts submitted during the semester would be a formative assessment)
4) Projects (project phases submitted at various completion points could be formatively assessed)
5) Portfolios (could also be assessed during its development as a formative assessment)
6) Performances

Method to Estimate Reliability?

1) Test-Retest (stability)
2) Equivalent Forms (equivalence)
3) Test- retest with Equivalent Forms (stability and equivalence)
4) Split Half (internal consistency)
5) Kuder- Richardson (internal consistency)
6) Cronbach Alpha (internal consistency)
7) Inter-rater reliability (consistency of rating)

Functions of Summative Assessment?

1) Measures students' achievement against course or unit objectives.
2) Covers a broad range of topics.
3) Uses questions with varying levels of difficulty.
4) Assigns grades to students.
5) Certifies completion or accomplishment.

Uses of mcqs?

i. Evaluate students' knowledge.
ii. Useful for large exams where many students take the same test.
iii. They help find areas where students are confused or making mistakes.
iv. To measure interpretation
v. To measure understanding
vi. To measure application

Name of Three Published/provincial or national Tests?

♣ Aptitude tests

♣ Readiness tests

♣ Placement tests

Define the term table of specification? OR Two Ways/Functions of Table of Specification?

A table of specification is a tool used by teachers to create a blueprint for a test. It helps organize what content and skills will be tested and is the first step in developing a test. It helps a teacher in allotting the questions to different content areas and Bloom 's learning categories in a systematic manner.

Two Ways of Table of Specification:

A table of specifications consists of a two-way chart or grid relating instructional objectives to the instructional content.

i. It ensures the balance and proper emphasis across all content areas covered by teacher.
ii. It ensures the inclusion of items at each level of the cognitive domain of Bloom's Taxonomy.

Classification of Assessment?

Assessment can be classified in **four ways**:

1) Nature of Assessment
2) Format of Assessment
3) Use in Classroom Instruction
4) Method of Interpreting Results

Define the term measurement?

Measurement is the process by which the attributes or dimensions of some object (both physical and abstract) are quantified. The tools used for this purpose may include test, observation, checklist, homework, portfolios, project etc. Measurement is the process of finding out the amount, size, or level of something. When we measure physical things like height or distance, we use tools such as a scale or a ruler because these things can be seen and touched. But in education, we measure things like attitude, behavior, or learning. These things cannot be seen directly so they are harder to measure. The tools we use in education cannot give exact results like a thermometer or ruler, but they help us understand these abstract things as accurately as possible.

Parts of MCQS?

Multiple choice items consist of **two parts:**

i. **A Stem:** The stem is the main question or statement. It should be clear, complete, and meaningful.
ii. **No. of options or alternatives:** The list of suggested solutions which may include words, numbers, symbols or phrases are called **alternatives** (also called choices or options). The correct alternative in each item is called **the answer** while all incorrect or less appropriate alternatives are called

distractors or foiled and the student ‘s task is to select the correct or best alternative from all the options.

CRT vs NRT five Comparison?

Features	CRT (Criterion-Referenced Test)	NRT (Norm-Referenced Test)
Comparison Targets	the student’s score is compared with a **fixed standard**.	the student’s score is compared with **other students**.
Selection of items	CRT questions check **specific skills** of the subject.	NRT questions are **general knowledge** questions that students can answer with basic understanding.
Meaning of success	In CRT, a student is called **master or non-master**, and anyone can pass.	In NRT, a student’s success depends on how **others perform**.
Average item difficulty	CRT questions are usually **hard**, because students must show mastery.	NRT questions are **easier**, so students’ scores can spread out.
Score distribution	CRT scores mostly stay on the **higher side**.	NRT scores are **spread out** — some low, some high, many in the middle.
Reported scores	CRT results are shown as **pass/fail** or **master/non-master**.	NRT results are shown as **percentile ranks** or **scale scores**.

What are the Evidences of Validity?

Three Evidences of Validity

- Content
- Construct
- Criterion

Define the term evaluation?

ENG520

Evaluation is the process of judging how good or successful learning is based on goals or objectives. After teaching, evaluation helps teachers see how much students learned and whether they met the expected learning goals. It looks at both the quality and the amount of learning.

Types of Objective Type Items?

- Selection Type
- Supply Type

Nature of Assessment?

- Maximum Performance Assessment
- Typical Performance Assessment

Differences btw the maximum performance assessment and typical performance assessment?

Maximum Performance:

Maximum Performance Determines what individuals can do when performing at their best. **Example:** Aptitude tests, achievement tests.

Typical Performance:

Typical Performance Determines what individuals usually do under natural conditions. **Example:** Attitude inventories, personality tests, observations, peer appraisal.

Which assessment Use in Classroom Instruction?

i. Placement Assessment
ii. Formative Assessment
iii. Diagnostic Assessment
iv. Summative Assessment

What are the Types of Written Tests?

1) **Verbal Test:** Checks reading, writing, or speaking skills. Most school tests are verbal.

2) **Non-Verbal Test:** A test that does not require reading, writing, or speaking. It often uses numbers, drawings, or symbols.

3) **Objective Test**: Easy to score because answers are clearly right or wrong. Examples: MCQs, True/False.

4) **Subjective Test**: Harder to score because answers may vary. Example: Essay.

5) **Teacher-Made Test:** A test prepared by a teacher specifically for their own classroom. It is designed according to the needs of a particular class.

6) **Standardized Test:** Made by experts with fixed instructions; student scores are compared to national standards.

7) **Power Test:** Has enough time to answer all questions; questions are usually hard.

8) **Speed Test**: Has very limited time; questions are usually easy and not everyone can finish.

Objective types of assessment?

(1) Matching Test
(2) Multiple Choice Test
(3) True False Tests
(4) Correct/Incorrect Test
(5) Simple Recall Test
(6) Best Answer Test
(7) Completion Test
(8) Classification Test.

What is Test-retest Method?

- Test-retest method is **a measure of stability**

- It gives the same test twice to the same group with any time interval between tests, Time interval can range from several minutes to the several years

What are Suggestions for Constructing MCQs?

(1) Make the stem clear and meaningful.
(2) Keep the stem complete and free of extra material.
(3) Avoid negatives like *not* unless necessary.
(4) Options must match the grammar of the stem.
(5) Only one correct/best answer should be included.
(6) Distractors must be believable.
(7) Avoid giving clues through similar wording.
(8) Keep options roughly equal in length.

What is Anecdotal Record?

Anecdotal records are factual descriptions of meaning incidents and events that the teacher observes. It is a method used to keep an accurate record of observations so that impressions do not become incomplete or biased. It is factual observation that a teacher writes to keep track of important moments in a student's learning or behavior.

Types of Formative Assessment?

(1) In-class observations & non-verbal feedback
(2) Homework for exam/class review
(3) Reflection journals checked during semester
(4) Formal & informal Q/A sessions
(5) Teacher–student conferences
(6) In-class informal presentations
(7) Student feedback & self-evaluation

What is "Guess Who" and "Sociometric" Technique?

"Guess Who" Technique:

In this technique the teacher chooses a student's **positive (or negative) behavior** as an example. Other students try to **guess which student** matches that behavior. Mostly **positive behaviors** are used so no one feels bad. This technique is like

nominating classmates, and the score is simply the number of times a student is mentioned for each behavior.

For example:

- "Who works well in groups?"
- "Who stays calm under pressure?"

Sociometric technique:

Sociometric Technique is a way to see how students are **accepted by their peers** and how the group interacts. It asks students to **choose classmates** they like to sit, work, or play with, and shows the social structure of the group.

For example:

Students are asked: **"**Who would you like to work with on a project?**"**

Write Cognitive Domains?

(1) Knowledge
(2) Comprehension
(3) Application
(4) Analysis
(5) Synthesis
(6) Evaluation

Write Affective Domains?

i. Receiving
ii. Responding
iii. Valuing
iv. Organization
v. Characterization

Purpose of Distractors in MCQs?

Distractors are wrong answers that look possible. Their purpose is to check whether students really understand the topic, reveal common mistakes students make, and to stop students from guessing easily.

Write Psychomotor Domains?

1) Perception
2) Set
3) Guided Response
4) Mechanism
5) Complex covert Response
6) Adaption
7) Origination

Write Factors in Test or Assessment Itself?

1) Unclear directions
2) Ambiguity
3) Test too short
4) Improper arrangement of items
5) Poorly constructed test items
6) Inadequate time limits

What is Equivalent Form Method?

The equivalent forms method is a measure of equivalence. It gives two forms of the test to the same group in close succession. This method ensures that different versions of the test measure the same thing equally well.

Standards for Selecting Appropriate Test?

When selecting a test, it is important to ensure that the test matches its intended purpose and is suitable for the target population.

1) Define purpose and population
2) Check extra information
3) Read test materials
4) Know test history
5) Check independent reviews

6) Examine sample materials
7) Use suitable tests

What is Assessment?

It means an appraisal of something to improve the quality of teaching and learning process for deciding what more can be done to improve the teaching, learning and outcomes.

Types of assessment?

- Types of assessment by nature
- Types of assessment by format

Types of Assessment by Nature

i. Maximum Performance Assessment
ii. Typical Performance Assessment

Types of Assessment by Format

a) Fixed Choice Assessment
b) Complex Performance Assessment

What is Kuder-Richardson Method?

Kuder- Richardson methods and Coefficient Alpha is also a measure of internal consistency. It gives test once. Score total test and apply Kuder- Richardson. This method, like the split-half method, measures internal consistency of a test but doesn't need to split the test in half.

- **KR20 formula:** Used when answers are **right or wrong (0 or 1)**. Works well for traditional tests.
- **Coefficient Alpha:** A general version of KR20 used for tests with **more than just right-or-wrong answers**.

Structure of observed learning outcomes (SOLO)

Depth of Knowledge (DOK)

What is Internal consistency?

It is a way to check if all parts of a test are measuring the same thing. If a test has high internal consistency, it means the questions are all related and give a reliable measure of the student's knowledge or ability.

Teacher Evaluation Methods?

Teachers are evaluated using various tools/methods:

i. Observation
ii. Student assessments
iii. Self-reflection and portfolios
iv. Peer reviews
v. Feedback from students or supervisors

Poor vs. Better Item in MCQs?

Poor item: Many students pick the wrong option, or most students choose the same wrong distractor. This shows the question is unclear or tricky.

Better item: The question clearly separates strong and weak students. Distractors are used evenly and the item has a good discrimination index.

Characteristics of a Good Portfolio?

- Purposeful
- Representative
- Organized
- Evidence-based
- Student-centered
- Reflective
- Updated

Weaknesses of portfolios?

- Can be time consuming to assemble.
- Hard to use in summative assessment.
- Difficult to compare results.
- Very low reliability.

Strengths of portfolios?

1) Encourage to become reflective learner.
2) Help in setting goal
3) self-evaluation
4) Help teacher and student to collaborate and reflect on student ‘s progress.
5) Effective way to communicate with parents.
6) Provide mechanism for student centered and student-directed conferences with parents.
7) Provide concrete examples of student’s development and current skills.

Best of Luck and

Remember me in your

precious Prayers
