ENG520

MIDTERM

ZAINEEE…

Note: if the Nimma Malik's midterm file is prepared, it is likely to cover around 98% of exam material.

Objective Part

From compilations by Nimma Malik File

1. Which of the following is the process by which the attributes of objects are quantified? ***Measurement***
2. Which of the following assessments is used when we want to assess student 's prior knowledge so that we can decide what is the level of student?? ***Placement Assessment***
3. Bloom 's Taxonomy was presented by ***Benjamin Bloom*** in the 1956.
4. Which of the following assessments comes at the end of the instructional session (course of unit)? ***Summative Assessment***
5. ***Content validity*** is the most important factor in constructing an achievement test.
6. Validity involves an overall evaluative ***judgment***.
7. Clear stem increases the probability of the item as well as ***reduce*** the reading time required.
8. Inter-rater method is a measure of ***consistency*** of ratings.

9. Many outcomes in the cognitive domain, such as those pertaining to knowledge, understanding, and thinking skills, can be measured by ***paper pencil tests***.
10. How many types of educational decision are mentioned in your syllabus? ***Eight***.

MCQ's from handouts:

11. In summative assessment ***high-stakes*** exams are conducted.
12. Other name of 'end of term' is ***summative assessment***.
13. How many levels does the revised cognitive domains have:
    a) 5
    b) ***6***.
    c) 7
    d) 8
14. Multiple choice questions ensure
    a) ***Objectivity***.
    b) Subjectivity
    c) Multiplicity
    d) Ambiguity

SUBJECTIVE PART (from file)

1. **Levels of Depth of Knowledge (DOK)?**

DOK (Depth of Knowledge) was presented by Webb in 1997, giving four levels of learning activities. 1) Recall: Simple recall of facts (e.g., define, list). 2) Skill/Concept: Application of concepts or procedures (e.g., compare, summarize). 3) Strategic Thinking: Reasoning, planning, using evidence (e.g., analyze,

critique). 4) Extended Thinking: Complex reasoning over time (e.g., design, synthesize, reflect).

2. **What is Split Half Method?**

Split half method is a measure of internal consistency. Split half reliabilities tend to be higher than equivalent form reliabilities because split half method is based on the administration of single assessment. The split- d is a way to check how reliable a test is by dividing it into two parts and comparing the results. You take one test and split it into two equal halves, like odd-numbered questions in one half and even-numbered questions in the other. You score both halves separately. If the scores on both halves match closely, it means the test is consistent and reliable. The Spearman Brown formula is then used to adjust the reliability score for the full test.

3. **Differentiate b/w Formative and summative assessment?**

Formative Assessment

Formative assessment is used **during teaching** to monitor students' learning. It provides feedback to improve teaching methods and help students overcome learning difficulties. It focuses on **how students are learning**, not on grading.

Uses:

- Identifies students' strengths and weaknesses
- Helps teachers modify teaching strategies
- Improves the teaching–learning process
- Encourages students to reflect and improve

Examples:

- Class quizzes

- Asking questions
- Feedback during lessons

Summative Assessment

Summative assessment is conducted **at the end of a unit or course** to measure students' overall achievement. Its main purpose is to **evaluate learning outcomes and assign grades**.

Examples:

- Final exams
- End-of-term tests
- Projects
- Standardized tests

Key Difference

Formative assessment improves the **learning process**, while summative assessment **certifies learning achievement**.

4. **"Guess Who" Technique?**

In this technique the teacher chooses a student's positive (or negative) behavior as an example. Other students try to guess which student matches that behavior. Mostly positive behaviors are used so no one feels bad. This technique is like nominating classmates, and the score is simply the number of times a student is mentioned for each behavior. For example:

"Who works well in groups?"

"Who stays calm under pressure?"
