Final Term Conceptual File: ENG-523 Discourse Analysis (Lectures 8–15)

Lecture-08: Political Discourse and the Role of Multimedia in Discourse Analysis

In the name of Allah.

Author: ZB ZAIB

1. Political Discourse and Linguistic Representation

Concept: Political discourse is the study of how language is used in the political arena to achieve specific goals, such as gaining power, maintaining control, or influencing public opinion. A central concern is **Linguistic Representation**, which explores how the world, people, and events are presented to the public through carefully chosen language. This representation is not neutral; it is a mediated view of “reality” that frames individuals and groups in positive or negative ways to serve a political agenda.

Explanation in Simple English: Think of it as a politician choosing a specific lens for a camera. They only show you what they want you to see. They use words to make their

allies look like heroes and their opponents look like villains. The choice of words is the "representation" that shapes public thought.

Daily Life Example: When a government raises taxes, they might use the phrase **"Revenue Generation for National Development"** (positive framing). An opposition party, however, will call the same action **"Burdening the Common Man with Unjust Levies"** (negative framing). The action is the same, but the linguistic representation completely changes the public's perception of it.

2. Metaphor in Political Discourse

Concept: Metaphor is a fundamental cognitive tool where we understand one complex or abstract domain (the **target**) in terms of a simpler, more concrete domain (the **source**). In politics, metaphors are used to simplify complex issues and evoke emotional responses. For instance, the concept of "war" is often used as a source domain for political campaigns (e.g., "War on Poverty," "War on Drugs").

Explanation in Simple English: A metaphor is a mental shortcut. When a politician talks about a problem, they don't want you to think hard; they want you to feel something. They use simple, strong images to make you feel like you already understand the complex issue.

Daily Life Example: When a political leader says the economy is **"a sinking ship,"** they are using a metaphor. The economy is not literally a ship, but this phrase immediately makes people feel fear, urgency, and the need for a strong captain (the leader) to save them.

3. Critical Discourse Analysis (CDA)

Concept: CDA is an interdisciplinary approach that views language as a social practice and focuses on how power, dominance, and inequality are enacted, reproduced, and resisted through discourse. CDA analysts look beyond the surface meaning of words to uncover the ideological structures embedded in grammatical choices. A key focus is on how power is maintained by obscuring the agent of an action.

Explanation in Simple English: CDA is a deep-dive investigation into language. It assumes that language is never innocent and is often used by powerful people to hide their actions. It asks: "Who is missing from this sentence?" or "Why was this passive voice used?" to expose the hidden agenda.

Daily Life Example: A company announces: **"Mistakes were made in the financial department."** A CDA analyst would point out that the passive voice ("Mistakes were made") deliberately avoids mentioning *who* made the mistakes. This is a linguistic choice to protect the responsible individuals (the agents) from accountability.

4. Political Sounds (Prosody)

Concept: This refers to the study of how phonetic, phonological, and supra-segmental features of language—such as **pitch, volume, speed (articulation rate), and accent**—are used for political effect. These features impact how a speaker is perceived (e.g., trustworthy, intelligent, powerful) and can be strategically altered.

Explanation in Simple English: It's the "sound" of the politician's voice. It's not just *what* they say, but *how* they sound when they say it. A politician might change their accent or slow down their speech to connect with a specific group of voters or to sound more serious.

Daily Life Example: A news anchor delivering a serious report will use a **slow, low-pitched, and steady articulation rate** to convey gravity and authority. If they were to speak quickly and with a high pitch, they would sound frantic and unprofessional, even if the words were the same.

5. Media Discourse

Concept: Media discourse encompasses interactions that occur through broadcast platforms (print, radio, TV, digital) where the communication is primarily **one-way**—oriented to a non-present audience (reader, listener, viewer). The discourse must be highly explicit because the audience cannot provide immediate, real-time feedback.

Explanation in Simple English: This is any communication where you can't talk back immediately. The speaker or writer has to do all the work to make sure you understand, because they can't see your confused face or hear your question.

Daily Life Example: An advertisement on TV is a form of media discourse. The advertiser must use clear visuals and simple language because you cannot stop the ad and ask, "What does that product do?" The message must be complete and persuasive in one go.

Lecture-09: Approaches and Methodologies in Discourse-I

In the name of Allah.

Author: ZB ZAIB

1. Discursive Psychology (DP)

Concept: Discursive Psychology (DP) is a social psychological approach that shifts the focus from internal mental states (like attitudes, intentions, or memory) to how these psychological matters are constructed and managed in **discourse** (talk and text). It treats discourse as a resource for performing social actions, not just a medium for revealing inner thoughts.

Explanation in Simple English: DP says: "Stop guessing what's in people's heads. Just look at what they *do* with their words." If someone says "I forgot," DP looks at how that phrase is used to excuse a mistake, not whether they *actually* forgot.

The Three Principles of DP:

Principle	Core Idea	Simple Explanation
Action Orientation	Discourse is a central resource for performing social actions (e.g., inviting, complaining, excusing).	People use words to *do* things, not just to *say* things.
Situated	Actions are situated sequentially (in the flow of talk), institutionally (in a specific setting), and rhetorically (to counter alternatives).	What you say and how you say it depends on who just spoke, where you are, and what argument you are trying to win.
Constructed and Constructive	Discourse is built from available resources (words, categories) and, in turn, builds or shapes social reality.	We use language to build our descriptions of the world, and those descriptions then shape how we act in the world.

Daily Life Example (Action Orientation): A child says to their parent, **"My tummy hurts."** The DP analyst sees this not as a statement of a medical fact, but as a social

action—specifically, an attempt to **excuse** themselves from doing homework or going to school.

2. Interactional Sociolinguistics (IS)

Concept: IS studies how social and cultural knowledge is brought into face-to-face interaction to enable participants to understand what is being communicated, especially the parts that are **left unsaid**. It focuses on **Contextualization Cues**—verbal and non-verbal signals (like intonation, code-switching, or gesture) that hint at the social context or "frame" of the interaction.

Explanation in Simple English: IS is about reading between the lines. We never say everything explicitly. We rely on shared history and small signals to understand the full meaning. If you miss the signals, you miss the meaning.

Daily Life Example: A friend walks up to you and says, **"Big test tomorrow, huh?"** with a wink and a slight change in tone.

- **Contextualization Cue:** The wink and tone change.
- **Unsaid Meaning:** They are not asking if there is a test; they are asking if you want to go out and skip studying, or they are offering sympathy. The cue tells you the "frame" is informal and conspiratorial, not academic.

Lecture-10: Approaches and Methodologies in Discourse-II

In the name of Allah.

Author: ZB ZAIB

1. English for Academic Purposes (EAP) and Genre Analysis

Concept: EAP is a specialized field of language teaching that focuses on the linguistic and communicative demands of academic contexts (universities, research). **Genre Analysis** is a key methodology in EAP. It studies the recurrent, conventionalized forms of communication (genres) used in academic communities, such as research articles, conference presentations, or student essays.

Explanation in Simple English: EAP teaches you the "language uniform" of university. Genre analysis is like studying the rulebook for each type of uniform. You learn that a lab report must be written in a specific way, and a presentation must be structured in another way.

Daily Life Example (Genre Analysis): A student is asked to write a **"Literature Review"** (a genre). They learn that this genre requires them to use phrases like **"Smith (2020) argues that…"** and **"However, Jones (2021) contradicts this finding…"** They must avoid personal opinions ("I think…") because the genre demands an objective, scholarly voice.

2. Corpus Approaches to Discourse Analysis

Concept: A **Corpus** is a large, structured collection of naturally occurring texts (spoken or written) stored electronically. Corpus linguistics uses specialized software to analyze this data, providing empirical evidence for language use. Key tools include:

- **Concordance:** A list of all occurrences of a word or phrase in the corpus, shown with its surrounding context.
- **Collocation:** The tendency for two or more words to occur together more often than chance would predict (e.g., *heavy rain*).

Explanation in Simple English: Imagine a giant digital vacuum cleaner sucking up millions of books and conversations. A corpus is the pile of data it collects. We use it to prove how people *actually* use words, not just how grammar books say they *should* use them.

Daily Life Example (Collocation): If you want to describe a strong wind, you might wonder whether to say *strong wind* or *powerful wind*. A corpus analysis would show that native speakers overwhelmingly use the **collocation *strong wind***. This empirical data helps language learners sound more natural.

Lecture-11: Discourse and Phonology

In the name of Allah.

Author: ZB ZAIB

1. Word Stress and Prominence

Concept: Word Stress is the fixed emphasis on a syllable within a word (e.g., *PHO-to-graph*). **Prominence** is a discourse-level choice where a speaker makes a syllable stand out (using greater intensity, duration, or pitch) to highlight a specific word as the most important piece of information in a sentence.

Explanation in Simple English: Stress is built into the word; prominence is chosen by the speaker. Prominence is how you signal to your listener what the "new" or "important" information is.

Daily Life Example: Imagine you are asked if you like the new car.

- If you say: "I like the **RED** car." (Prominence on *red*), you are correcting the person who thought you liked the blue one.
- If you say: "**I** like the red car." (Prominence on *I*), you are contrasting your opinion with someone else who doesn't like it.

2. Intonational Units (IUs) and Turn-Taking

Concept: An **Intonational Unit (IU)** is a segment of speech, often a single word or a short phrase, that is delivered with a single, coherent pitch contour. IUs are crucial for organizing spoken discourse. They typically contain one **Pitch Word** (the most prominent word) and end with a **Pitch Boundary** (a change in pitch that signals a pause or the end of an idea).

Explanation in Simple English: We speak in short bursts of sound, not long streams. These bursts are IUs. The way your voice goes up or down at the end of a burst (the pitch boundary) is a signal. A low pitch often signals you are done talking, which is a **turn-yielding cue**.

Daily Life Example (Turn-Taking): In a conversation, if you say: **"I'm going to the market / to buy some fruit / and vegetables."**

- The first two boundaries (/) are often signaled by a slight rise in pitch, telling the listener, "I'm not finished yet."
- The final boundary is signaled by a drop in pitch, which is the cue for the listener to take their turn.

3. Halliday's Ideational Metafunction (Transitivity)

Concept: Halliday's Systemic Functional Linguistics (SFL) analyzes language based on its function. The **Ideational Metafunction** is how language represents the world—our experiences, actions, and events. The system of **Transitivity** is the grammatical resource for this. It analyzes the clause into a **Process** (the verb/action), **Participants** (who or what is involved), and **Circumstances** (when, where, how).

Explanation in Simple English: Transitivity is the grammar of action. It shows us who is doing what to whom, and under what conditions. By analyzing these parts, we can see how a speaker chooses to portray reality.

Daily Life Example: Compare:

1. **"The government** (Participant) **increased** (Process) **the prices** (Participant) **last month** (Circumstance)."
2. **"The prices** (Participant) **increased** (Process) **last month** (Circumstance)." The first sentence uses an active process and clearly names the government as the actor. The second sentence uses a different process (often called a 'middle' process) and hides the actor, making the price increase sound like a natural event.

Lecture-12: Discourse, Vocabulary and Grammar

In the name of Allah.

Author: ZB ZAIB

1. Lexical Cohesion

Concept: Lexical cohesion is a non-grammatical way of creating **textuality** (the quality of a text being a unified whole) by using chains of related words. It is the result of the text being "about the same thing." It includes:

- **Repetition:** Repeating the exact same word.
- **Synonymy/Near-Synonymy:** Using words with similar meanings (e.g., *sound* and *noise*).

- **Superordinate/Hyponymy:** Using a general class word (Superordinate, e.g., *car*) and a specific member (Hyponym, e.g., *Jaguar*).
- **General Word:** Using a simple, common word to refer to a complex idea (e.g., *thing*, *stuff*).

Explanation in Simple English: Lexical cohesion is how a writer keeps the reader focused on the topic without repeating the same word too much. It's like a thread of meaning running through the text.

Daily Life Example (Superordinate/Hyponymy): "I bought a new **laptop** (Hyponym). The **device** (Superordinate) is much faster than my old one." The word "device" links back to "laptop" and keeps the text flowing smoothly.

2. Discourse-Organizing Words

Concept: These are words that belong to an open class (nouns, verbs, adjectives) but function like closed-class grammatical words by referring to and structuring the text itself, rather than the content of the world. They act as a kind of pronoun for a whole chunk of text. Examples include *issue, problem, question, position, case, situation*.

Explanation in Simple English: These words are the "signposts" of a document. They tell you what the writer is doing with the information. If you see the word "problem," you know the previous sentences described a difficulty.

Daily Life Example: "The traffic was terrible, and the car broke down. This **situation** (Discourse-Organizing Word) made me late for the meeting." The word "situation" refers to the entire complex event (traffic + breakdown) described in the previous sentence.

3. Textual Aspects of Lexical Competence

Concept: This concept, linked to Hymes's **Communicative Competence**, suggests that knowing a word is not enough; one must also know how to use it appropriately and effectively in a given social context. It involves the ability to use words to create coherent and cohesive texts, and to understand when conventional lexical relations (like antonyms) are deliberately rearranged for a specific textual effect.

Explanation in Simple English: It's the difference between knowing the dictionary definition of a word and knowing how to use it in a real conversation. For example,

knowing that *smart* and *stupid* are opposites, but also understanding a writer who describes someone as **"smart but stupid"** (meaning clever but morally reckless).

Daily Life Example: A student knows the word **"awesome"** (meaning inspiring awe). However, a textually competent speaker knows that in casual conversation, using "awesome" to describe a sandwich is appropriate, even though the sandwich is not literally awe-inspiring.

Lecture-13: The Nature of Reference in Text and Discourse

In the name of Allah.

Author: ZB ZAIB

1. Staging and Thematisation

Concept: Staging is a general term for any device that gives relative prominence to various segments of a discourse. **Thematisation** is a specific form of staging that involves the **linear organization** of a text, where what the speaker or writer puts **first** (the **Theme**) influences the interpretation of everything that follows. The title of a text is the most powerful thematisation device.

Explanation in Simple English: Staging is like setting up a play. The title and the first sentence are the stage curtains. They tell the audience what kind of play they are about to watch, which controls how they understand the rest of the performance.

Daily Life Example: If a story is titled **"A Prisoner's Escape,"** the reader interprets the main character's actions (e.g., "He considered his present situation") as being about a jailbreak. If the exact same text is titled **"A Wrestler in a Tight Corner,"** the reader interprets the actions as being about a wrestling match. The title **stages** the interpretation.

2. Natural Order and Point of View

Concept: Natural Order is the tendency to present events in the sequence in which they occurred in time (e.g., event 1, then event 2). This order is often assumed to imply

a causal relationship (*post hoc ergo propter hoc* - after this, therefore because of this). This ordering is also influenced by the speaker's **Point of View**, often aligning with a stereotypical cultural pattern (e.g., describing a house from the front door inwards).

Explanation in Simple English: We naturally tell stories in the right order. If you break the natural order, it confuses the listener. Our culture also has a "natural" way of describing things, like starting a description of a building from the outside.

Daily Life Example: When giving directions, you always start from the listener's current location: **"Go straight, then turn left."** You don't say "Turn left, then go straight" if the person is already standing at the starting point. This is following the **natural order** of the journey.

3. Reference (Endophoric and Exophoric)

Concept: Reference is the relationship where a word or phrase points to an entity in the text or the real world.

- **Exophoric Reference:** Points to something *outside* the text, in the shared physical or cultural context (e.g., "Look at **that**!").
- **Endophoric Reference:** Points to something *inside* the text.
    - **Anaphoric Reference:** Points *back* to a previously mentioned entity (e.g., "Ali came. **He** was late.").
    - **Cataphoric Reference:** Points *forward* to an entity that will be mentioned later (e.g., "**This** is the problem: the car is broken.").

Explanation in Simple English: Reference is how we avoid repeating names. Exophoric is pointing outside the book. Endophoric is pointing inside the book. Anaphoric is looking back, and Cataphoric is looking forward.

Daily Life Example (Anaphoric): "My sister, **Aisha**, won the award. **She** was very happy." The pronoun **"She"** is an anaphoric reference that points back to "Aisha."

Lecture-14: Doing Discourse Analysis

In the name of Allah.

Author: ZB ZAIB

1. Discourse Ethics (DE)

Concept: Discourse Ethics (DE), primarily associated with Habermas and Apel, is a moral theory that grounds ethical norms in the agreements reached through a process of **rational, free, and open discourse**. The core idea is that a norm is morally binding only if all those affected by it could rationally accept it after a fair discussion.

Explanation in Simple English: Instead of a single person deciding what is right or wrong, everyone affected by a rule must sit down and talk about it fairly until they all agree. The fairness of the *process* makes the *result* moral.

Habermas's Rules for Ideal Discourse:

1. **Participation:** Everyone competent to speak and act is allowed to take part.
2. **Equality of Speech:** Everyone is allowed to question any assertion, introduce any assertion, and express their attitudes, desires, and needs.
3. **Freedom from Coercion:** No speaker may be prevented from exercising their rights by internal or external force.

Daily Life Example: A group of roommates needs to decide on a cleaning schedule. Instead of one person dictating the rules, they hold a meeting where everyone is allowed to suggest a schedule, criticize others' suggestions, and state their needs (e.g., "I need Sundays off"). The final schedule, agreed upon by all, is ethically binding on the group.

2. Data Generation (Naturally Occurring vs. Contrived)

Concept: Discourse analysts must choose the type of data they study.

- **Naturally Occurring Data:** Talk or text that was produced for a real-life purpose, not for the sake of research (e.g., a recorded phone call, a newspaper article). This is often preferred because it is not influenced by the researcher's presence.
- **Contrived Data:** Talk or text that is generated specifically for the research project (e.g., interviews, focus groups). While useful, it may be influenced by the participants' awareness of being studied.

Explanation in Simple English: Natural data is like secretly watching a real event. Contrived data is like asking people to act out a scene for you. Natural data is often seen as more "real" because people aren't trying to impress the researcher.

Daily Life Example:

- **Naturally Occurring:** A recording of a customer complaining to a company helpline.
- **Contrived:** An interview where a researcher asks the customer, “How do you feel about complaining?”

3. Confidentiality

Concept: Confidentiality is the ethical obligation of the researcher to protect the identity of the research subjects. The researcher knows the identity but takes steps (like using pseudonyms, aggregating data, or securing records) to ensure that the public cannot link the data back to the individual.

Explanation in Simple English: It’s the promise to keep a secret. You know the person’s name, but you promise to never tell anyone else, even if it means changing some details in your report to protect them.

Daily Life Example: A researcher studying student study habits might interview “Ali” and “Fatima.” In the final report, they will refer to them as **“Student A”** and **“Student B”** and change the name of their university to ensure their identity remains confidential.

Lecture-15: Discourse Genre and Critical Discourse Analysis

In the name of Allah.

Author: ZB ZAIB

1. Genre as Social Action

Concept: Genre is not just a category of text (like “poem” or “essay”); it is a way of **social action**. Genres are the recurrent, conventionalized forms of communication that people use to “get things done” within a specific social system. The genre (e.g., a job application) is a tool for achieving a social purpose (e.g., getting a job).

Explanation in Simple English: Every time you want to do something important in society, you use a specific type of talk or writing. That specific type is the genre, and it's a tool for action.

Daily Life Example: When you want to borrow money from a bank, you use the **"Loan Application"** genre. This genre is a specific social action that, if performed correctly (filling out the forms, providing documents), achieves the social purpose of receiving a loan.

2. The Thinness of the Written Sign

Concept: Written language is considered "thin" because it lacks the rich, immediate, and multi-modal cues (like tone of voice, facial expressions, and gestures) present in face-to-face spoken interaction. The writer is distant from the reader in time and space, relying only on the arrangement of letters, punctuation, and graphic elements to convey meaning.

Explanation in Simple English: Writing is like a low-resolution picture of a conversation. You only get the words, not the feelings. This is why a simple text message can be easily misunderstood—the reader has to guess the tone.

Daily Life Example: Sending a text message that says, **"I'm fine."** The reader might interpret this as angry, sad, or genuinely fine, depending on their mood. If the speaker had said it in person, the reader would know the true meaning from the speaker's facial expression and tone of voice.

3. Typification and Social Organization

Concept: Typification is the process by which certain linguistic forms and structures become standardized and expected for a particular social activity. These genre typifications are not random; they result from the stabilization of social groups and activities. The stability of a genre (e.g., a scientific paper) is tied to the stability of the social system it is part of (e.g., the scientific community).

Explanation in Simple English: Typification is the reason why all weather reports sound the same, or all legal documents look similar. Society has decided on the "typical" way to do this kind of communication, which makes it easy for everyone to understand quickly.

Daily Life Example: The genre of a **"University Transcript"** is highly typified. It always includes the student's name, course codes, grades, and a university seal. If a document claiming to be a transcript looked like a handwritten letter, it would fail because it does not match the established typification.

4. Critical Discourse Analysis (CDA) - Deeper Dive

Concept: CDA's deeper implication is that the orders of discourse (the regularities and conventions of language use) are tied to the **dynamics of life processes** and social power structures. It argues that linguistic orders reflect social orders, and by studying the language, we can understand the power dynamics in society. CDA is a dynamic approach that recognizes that discourse is constantly changing and that the mechanisms for how discourse travels between different social spheres (e.g., from a scientific lab to a political debate) are themselves topics of examination.

Explanation in Simple English: CDA is a tool to see the invisible rules of society. If a certain group of people always uses a certain type of formal language, CDA suggests that this language is a tool that helps them keep their power. By studying the language, we study the power.

Daily Life Example: In a hospital, the way a doctor speaks to a nurse is often different from how the nurse speaks to a patient. CDA would analyze this to show the **social hierarchy** (power structure) of the hospital, where the doctor's discourse reflects a position of authority.

Maximum Important Definitions (Whole Syllabus)

This section provides an exhaustive list of core concepts from the syllabus, explained simply and with clear daily life examples.

Concept	Simple Definition	Daily Life Example
Discourse Analysis	The study of how language is used in real-life situations, looking at whole conversations or texts.	Analyzing a job interview transcript to see how the candidate used language to try and get the job.
Cohesion	The grammatical and lexical links that make the sentences in a text stick together.	Saying, "I bought a new phone. **It** is very fast." The word "**It**" links the two sentences.
Coherence	The overall sense that a text is logical and makes sense to the reader.	Reading a story where the events follow a clear, understandable sequence, even if the grammar is imperfect.
Linguistic Representation	The way language is deliberately chosen to frame a person, event, or idea in a specific light.	Calling a new policy a "**reform**" (positive) versus a "**cut**" (negative).
Conceptual Metaphor	Understanding an abstract idea (like time or argument) by comparing it to a concrete one (like money or war).	Describing an argument as a "**battle**" where you "**win**" or "**lose**" points.
Critical Discourse Analysis (CDA)	A method to uncover how power and ideology are hidden within language use and grammatical choices.	Analyzing a political speech to see how the speaker uses the passive voice to avoid taking responsibility for a failure.
Discursive Psychology (DP)	An approach that studies psychological concepts (like intention or attitude) as social actions performed through talk.	Interpreting a teenager's statement, "I hate this food," as an **action** to get out of eating, rather than a statement of their true internal attitude.
Action Orientation	The DP principle that people use talk to *do* things (e.g., invite, excuse, blame) rather than just describe their thoughts.	Saying, "That's a nice shirt," which is an **action** of complimenting, not just a description of the shirt.
Interactional Sociolinguistics (IS)	The study of how social context and shared knowledge help	A friend saying, "Remember last summer?" and you immediately

Concept	Simple Definition	Daily Life Example
	people understand the unsaid parts of a conversation.	know they are talking about a specific trip you took together.
Contextualization Cues	Verbal or non-verbal signals (like tone, accent, or gesture) that hint at the social context or "frame" of the interaction.	A teacher using a **formal tone** and specific vocabulary to signal that the conversation is now in a **teaching frame**.
Genre as Social Action	The idea that a specific type of text (genre) is a tool used to achieve a social purpose.	Using the **"Resume"** genre to perform the social action of applying for a job.
Thematisation / Staging	The process of placing the most important information first (in a title or sentence) to control the reader's interpretation.	A news article starting with the most shocking detail to ensure the reader continues reading.
Anaphoric Reference	A word (usually a pronoun) that points *back* to an entity already mentioned in the text.	"The dog barked. **It** was hungry." "**It**" points back to "The dog."
Cataphoric Reference	A word that points *forward* to an entity that will be mentioned later in the text.	"**Here** is the plan: we will leave at dawn." "**Here**" points forward to the details of the plan.
Superordinate	A general word that acts as a category for more specific words (hyponyms).	"**Furniture**" is the superordinate for "chair," "table," and "sofa."
Discourse-Organizing Words	Nouns that refer to and structure the text itself, acting as signposts for the reader.	"The main **issue** is…" The word "**issue**" refers to the preceding discussion.
Prominence	The speaker's choice to make a word stand out (with volume or pitch) to mark it as the most important information.	Saying, "I want the **BLUE** one," to correct a mistake.
Intonational Unit (IU)	A small, coherent chunk of spoken language, usually containing one main idea.	The segments of speech separated by a brief pause or change in pitch.

Concept	Simple Definition	Daily Life Example
Transitivity	The grammatical system that shows how actions and events are represented in a clause (Process, Participants, Circumstances).	Analyzing a sentence to see if the actor is clearly named or hidden.
Discourse Ethics (DE)	The moral theory that a rule is only ethical if everyone affected by it can agree to it after a fair, open discussion.	A community holding a town hall meeting to vote on a new law.

100+ Conceptual Quizzes

This section contains 100+ conceptual quizzes designed to test deep understanding, with the correct answer and a detailed daily life example for every single one.

Lecture 8: Political Discourse and Media (Quizzes 1-15)

Q1: Which concept explains why a politician might call a tax increase "Fiscal Adjustment" instead of "Tax Hike"? *Answer:* Linguistic Representation. *Explanation:* This is a deliberate choice of words to frame the action positively, making it sound like a necessary, technical correction rather than a painful burden on the public.

Q2: When a political leader describes their opponent as a "snake in the grass," they are primarily using which cognitive tool? *Answer:* Conceptual Metaphor. *Explanation:* They are not literally calling the opponent a snake, but using the negative qualities of a snake (deceit, danger) to shape the public's perception of the opponent's character.

Q3: A company press release states, "The budget deficit was unfortunately incurred." A CDA analyst would focus on the use of the passive voice to identify what? *Answer:* Obscuring the Agent (the person/group responsible). *Explanation:* The passive voice ("was incurred") hides *who* incurred the deficit. The CDA analyst exposes this linguistic choice as a strategy to avoid accountability.

Q4: A news channel uses a dramatic, low-pitched voice and slow pace when reporting a crisis. This use of vocal features for effect is an example of what? *Answer:* Political Sounds (Prosody). *Explanation:* The anchor is using the "music" of their voice (pitch and pace) to convey the seriousness and gravity of the event, influencing the viewer's emotional response.

Q5: What is the primary difference between a face-to-face conversation and media discourse (like a TV broadcast)? *Answer:* Media discourse is primarily one-way, lacking immediate, real-time feedback. *Explanation:* The TV host cannot see your reaction or answer your question instantly, so the message must be fully explicit and self-contained.

Q6: A political party's slogan is "A New Dawn for the Nation." This is an example of metaphor where the nation's future is framed as what? *Answer:* A journey or a natural cycle (the rising of the sun). *Explanation:* The "dawn" metaphor suggests hope, a fresh start, and the end of a dark period (night), simplifying the complex idea of political change.

Q7: Why does CDA often face criticism for being "political" itself? *Answer:* Because it starts with the assumption that power abuse exists and sets out to prove it. *Explanation:* Critics argue that CDA analysts are not neutral observers but are politically concerned individuals whose analysis confirms their pre-existing beliefs about social inequality.

Q8: When a government uses a specific, technical term like "Quantitative Easing" instead of "Printing Money," they are using language to achieve what? *Answer:* To mystify or legitimize the action. *Explanation:* The technical term makes the action sound complex and professional, suggesting it is best left to experts, thereby legitimizing the policy and discouraging public scrutiny.

Q9: A politician from a working-class background deliberately uses a more formal, standard accent in public speeches. This is a strategic use of what? *Answer:* Political Sounds (Accent/Phonology). *Explanation:* They are modifying their accent to project an image of authority, education, and national unity, which they believe will attract a wider range of voters.

Q10: In a multimedia advertisement, the text is small, but the image is large and colorful. Discourse analysis would note that the image is used to create what? *Answer:* Prominence and Attention. *Explanation:* The visual element is staged to be

more prominent than the “fine print” (the small text), ensuring the audience focuses on the positive message and ignores the details.

Q11: What is the main goal of CDA? *Answer:* To expose the relationship between language, power, and ideology. *Explanation:* The goal is to make visible the hidden ways in which language is used to maintain dominance or social inequality.

Q12: The phrase “The world is a stage” is a classic example of metaphor. In political discourse, what is the *target* domain of the metaphor “The economy is a patient”? *Answer:* The economy. *Explanation:* The economy (the target) is being understood in terms of a patient (the source), suggesting it is sick and needs a doctor (the government) to heal it.

Q13: Why is the study of Political Sounds (Prosody) important in discourse analysis? *Answer:* Because the way we sound impacts how people perceive our trustworthiness and authority. *Explanation:* A speaker with a wavering voice might be perceived as untrustworthy, even if their words are factually correct.

Q14: What is the core claim of Linguistic Representation? *Answer:* “Reality” is not simply given to us through language; it is mediated by it. *Explanation:* We don’t just describe reality; we *construct* it through the words we choose.

Q15: When a journalist uses a quote from a politician, they are engaging in what type of discourse? *Answer:* Media Discourse. *Explanation:* The journalist is using a broadcast platform to relay a message to a non-present audience.

Lecture 9: Discursive Psychology and IS (Quizzes 16-30)

Q16: A child says, “I didn’t break the vase, it just fell.” A Discursive Psychologist (DP) would analyze this statement as performing which social action? *Answer:* Excusing or denying responsibility. *Explanation:* The DP focuses on the function of the talk—shifting blame—rather than the child’s internal memory of the event.

Q17: The DP principle that states that what we say is shaped by what was just said is known as being situated in what way? *Answer:* Sequentially. *Explanation:* “Sequentially” means in the order of the conversation. Your response is always a reaction to the immediately preceding talk.

Q18: A doctor asks a patient, “How are you feeling today?” The patient replies, “Fine.” An Interactional Sociolinguist (IS) would note that the patient is relying on

the doctor to understand the context of the question as referring to what? *Answer:* Their health condition, not their financial or social status. *Explanation:* The "institutional frame" (doctor's office) provides the background knowledge that limits the meaning of "How are you?" to health matters.

Q19: What is the primary focus of Discursive Psychology? *Answer:* Discourse as a resource for performing action. *Explanation:* DP is concerned with *how* action is done through talk, moving away from treating talk as a window into the mind.

Q20: A speaker uses a specific, formal tone and avoids slang when talking to their boss. This change in linguistic style is a use of what concept from IS? *Answer:* Contextualization Cues. *Explanation:* The formal tone is a cue that signals the interaction is framed as a professional, hierarchical encounter.

Q21: The DP principle that states that discourse is built from available resources (like common phrases or categories) is known as what? *Answer:* Constructed. *Explanation:* We don't invent language every time we speak; we use pre-existing linguistic building blocks to construct our talk.

Q22: In a court of law, a lawyer's questions are highly structured and formal. This is an example of discourse being situated in what way? *Answer:* Institutionally. *Explanation:* The rules and goals of the institution (the court) strictly determine the type of talk that is allowed.

Q23: A friend says, "I think you should buy that car," but then adds, "Don't you agree?" The second part is an example of talk being situated in what way? *Answer:* Rhetorically. *Explanation:* The speaker is anticipating a potential disagreement and trying to manage or counter that alternative view by seeking agreement.

Q24: What is the main purpose of Contextualization Cues in Interactional Sociolinguistics? *Answer:* To signal the social context or "frame" of the interaction. *Explanation:* They are the subtle hints that tell participants "We are now joking" or "We are now being serious."

Q25: The DP principle that states that the descriptions we build through language then shape our social reality is known as what? *Answer:* Constructive. *Explanation:* If a community constantly describes a certain area as "dangerous," that description (the discourse) will lead to real-world actions like avoiding the area.

Q26: What is the term for the shared background knowledge that participants in an interaction rely on to understand the unsaid? *Answer:* Contextual Common Ground. *Explanation:* This is the shared history, culture, and knowledge that allows people to communicate efficiently without having to explain everything.

Q27: A person is speaking quickly and with a high pitch. The listener interprets this as the speaker being "anxious." This interpretation is based on the DP idea that discourse is what? *Answer:* Constructed (from prosodic resources). *Explanation:* The listener is using the speaker's prosody (speed and pitch) as a resource to construct an understanding of the speaker's emotional state.

Q28: In IS, what happens when a speaker's Contextualization Cues are misunderstood by the listener? *Answer:* Miscommunication or confusion. *Explanation:* If a joke is delivered with a serious tone, the listener might miss the cue and think the speaker is being rude or aggressive.

Q29: A DP study that focuses on how people use the term "intention" in their daily talk is examining what? *Answer:* The practical use of attributions of intention. *Explanation:* It's not about the mental state of intention, but how the *word* "intention" is used as a resource to explain or justify actions.

Q30: The idea that language is an irreducible part of social life and connected to almost everything we do is a broad definition of what? *Answer:* Discourse Analysis. *Explanation:* This definition highlights the pervasive nature of language in all social activities.

Lecture 10: EAP and Corpus Approaches (Quizzes 31-45)

Q31: A student is taught to use the phrase "The data suggests…" instead of "I think…" in a research paper. This instruction is typical of which field? *Answer:* English for Academic Purposes (EAP). *Explanation:* EAP focuses on teaching the specific linguistic conventions required to sound objective and authoritative in an academic setting.

Q32: What is the primary purpose of **Genre Analysis in EAP?** *Answer:* To identify the recognizable structural identity and rhetorical practices of academic texts. *Explanation:* It helps students understand the "rules" of a specific academic text type, like a thesis or a book review.

Q33: What is a **Corpus in the context of discourse analysis?** *Answer:* A large, structured collection of naturally occurring texts stored electronically. *Explanation:* It is the raw data source used to find out how language is actually used in the real world.

Q34: A researcher uses a software tool to find every instance of the word "globalization" in a corpus, along with the words immediately surrounding it. This tool is performing what function? *Answer:* Concordance. *Explanation:* Concordance provides a list of a word's occurrences in context, allowing the researcher to see its typical usage patterns.

Q35: The tendency for the words "highly" and "successful" to appear next to each other very frequently is an example of what? *Answer:* Collocation. *Explanation:* Collocation is the habitual co-occurrence of words, which makes phrases like "highly successful" sound natural to native speakers.

Q36: Why has EAP assumed greater prominence in the academy? *Answer:* Due to the increasing cultural, social, and linguistic diversity of the student population. *Explanation:* As more international students enroll, the need for specialized instruction in academic communication increases.

Q37: What is the main benefit of using a Corpus Approach over relying on a grammar book? *Answer:* It provides empirical evidence of actual language use, not just prescriptive rules. *Explanation:* A corpus shows how millions of people *do* use language, which is often different from how a single grammar book says they *should* use it.

Q38: A study that examines how often the pronoun "I" is used in science papers versus humanities papers is analyzing what feature of academic discourse? *Answer:* Self-mention (or Authorial Identity). *Explanation:* This research explores how writers choose to represent their personal involvement in the text, which varies by discipline.

Q39: What is the concept that describes genres as a kind of "tacit contract" between writers and readers? *Answer:* Genre Analysis. *Explanation:* The contract means the writer agrees to follow the genre's rules, and the reader agrees to have certain expectations based on that genre.

Q40: What is the term for the process of analyzing the distribution of different genre features to see how they cluster in complementary distributions? *Answer:* Distributional Analysis (or a specific form of Genre Analysis). *Explanation:* This involves

counting and comparing features (like passive voice, modal verbs, etc.) across different texts to find patterns.

Q41: A student is struggling to write a "Proposal" because they don't know the required sections (Introduction, Methodology, Budget). They are struggling with the conventions of what? *Answer:* Genre. *Explanation:* The Proposal genre has a fixed, expected structure that must be followed to achieve its purpose.

Q42: What does a Corpus Approach primarily study? *Answer:* The patterns of lexico-grammatical features in large amounts of text. *Explanation:* It focuses on finding statistical regularities in vocabulary and grammar.

Q43: The idea that cultural factors influence the preferred ways of organizing ideas in writing (e.g., direct vs. indirect rhetoric) is known as what? *Answer:* Cultural Specificity in Rhetorical Preferences. *Explanation:* This suggests that a writer's native culture influences the structure and style of their academic writing.

Q44: What is the main function of **Concordance in corpus analysis?** *Answer:* To show the context in which a word is used. *Explanation:* Seeing a word in its surrounding text helps a researcher understand its meaning and function better than seeing it in isolation.

Q45: What is the core idea behind the **Ideational Metafunction in Halliday's SFL?** *Answer:* How language represents the world and our experiences. *Explanation:* It is the function of language to construct and convey our understanding of reality.

Lecture 11: Discourse and Phonology (Quizzes 46-60)

Q46: A speaker says, "I want the **RED pen, not the black one." The emphasis on "RED" is an example of what discourse-level choice?** *Answer:* Prominence. *Explanation:* The speaker is using increased volume/pitch to mark "RED" as the new, contrastive, and most important piece of information.

Q47: What is the difference between **Word Stress and **Prominence**?** *Answer:* Word stress is fixed within a word (e.g., *PHO-to-graph*); prominence is a flexible choice made by the speaker in a sentence. *Explanation:* Stress is a dictionary feature; prominence is a communicative strategy.

Q48: A speaker pauses briefly and their pitch rises slightly at the end of a phrase. This is a signal that they intend to continue speaking and is an example of what?

Answer: A non-low Pitch Boundary (within an Intonational Unit). *Explanation:* The rising pitch signals that the idea is incomplete, holding the floor and preventing the listener from taking a turn.

Q49: What is the grammatical system that analyzes the clause into Process, Participants, and Circumstances? *Answer:* Transitivity. *Explanation:* Transitivity is the tool used to analyze the Ideational Metafunction, showing the structure of the action being represented.

Q50: In a conversation, a speaker drops their pitch significantly at the end of their sentence and then remains silent. This is a clear example of what? *Answer:* A Turn-Yielding Cue. *Explanation:* The low pitch boundary signals that the speaker's turn is complete, inviting the listener to take the next turn.

Q51: What is an **Intonational Unit (IU)?** *Answer:* A segment of speech delivered with a single, coherent pitch contour, often corresponding to a single idea. *Explanation:* It is the natural "chunk" in which we deliver spoken information.

Q52: A politician's articulation rate (speed of speech) is observed to be much faster when they are challenging an opponent than when they are in power. This change in speed is a strategic use of what? *Answer:* Political Sounds (Prosody). *Explanation:* The faster rate conveys urgency and aggression, which is suitable for the role of a challenger.

Q53: What is the role of the **Pitch Word within an Intonational Unit?** *Answer:* It is the most prominent word that conveys the most important information in that unit. *Explanation:* It is the word the speaker wants the listener to focus on.

Q54: If a sentence is written in the passive voice, "The decision was approved by the committee," which element of Transitivity is highlighted? *Answer:* The Process (was approved) and the Circumstance (by the committee). *Explanation:* The passive voice often places the action and the actor (agent) in less prominent positions than the active voice.

Q55: What is the term for the phenomenon where the beginning of a new topic in speech is often correlated with a shift to a higher pitch? *Answer:* Topic-Signaling (via pitch level). *Explanation:* The higher pitch acts as an auditory signal to the listener that the speaker is moving to a new subject.

Q56: What does the **Ideational Metafunction of language primarily deal with?** *Answer:* The representation of the inner and outer experience of the world. *Explanation:* It is the function of language to express our ideas and understanding of reality.

Q57: A speaker uses a very slow, deliberate pace and clear articulation. How might this affect the number of Intonational Units they use? *Answer:* They will likely use more Intonational Units. *Explanation:* A slower, more emphatic speaker tends to break their speech into smaller, more deliberate chunks.

Q58: What is the term for the grammatical resource that realizes the Ideational Metafunction? *Answer:* Transitivity. *Explanation:* Transitivity is the grammatical framework (Process, Participants, Circumstances) that allows us to express our experience of the world.

Q59: What is the function of a **down-step in pitch at the end of a clause?** *Answer:* It is a strong turn-yielding cue. *Explanation:* The drop in pitch signals finality, indicating the speaker is ready to hand over the turn.

Q60: What is the primary focus of the study of **Phonology in a discourse-oriented approach?** *Answer:* Intonation and supra-segmental features, as they organize the larger discourse. *Explanation:* The focus shifts from individual sounds (phonemes) to the "music" of speech (pitch, rhythm) that structures conversation.

Lecture 12: Vocabulary and Grammar (Quizzes 61-75)

Q61: In the sentence, "I love my new car. The **vehicle is very fuel-efficient," the word "vehicle" is an example of what type of lexical cohesion?** *Answer:* Superordinate. *Explanation:* "Vehicle" is the general class word that encompasses the more specific word "car."

Q62: The use of the words "issue," "problem," and "solution" to structure a report is an example of what type of vocabulary? *Answer:* Discourse-Organizing Words. *Explanation:* These words refer to the structure of the text itself, acting as signposts for the reader's comprehension.

Q63: What is the difference between **Cohesion and **Coherence**?** *Answer:* Cohesion is the linguistic links (grammar/words); Coherence is the overall sense of meaning and logic. *Explanation:* A text can be cohesive (linked words) but incoherent (not making sense), like a jumbled list of perfectly linked sentences.

Q64: The repetition of the word "change" throughout a political manifesto is an example of what type of lexical cohesion? *Answer:* Repetition. *Explanation:* This is the most direct way to create a lexical chain and maintain focus on a key theme.

Q65: What is the term for the ability to use words appropriately and effectively in a social context, going beyond just knowing the dictionary definition? *Answer:* Lexical Competence (part of Communicative Competence). *Explanation:* It's knowing that "eat" is correct, but "devour" is more appropriate for a very hungry person.

Q66: A writer describes a new product as "brilliant yet flawed." The juxtaposition of these two seemingly contradictory words is an example of what? *Answer:* Rearranging conventional lexical relations. *Explanation:* The writer is forcing the reader to adjust their usual understanding of the words to interpret a complex meaning (e.g., technically brilliant but practically flawed).

Q67: What is the main function of **Lexical Cohesion?** *Answer:* To create **textuality** (the quality of being a unified text). *Explanation:* It ensures the text is perceived as a single, connected message rather than a random sequence of sentences.

Q68: In the sentence, "I bought a new computer. **It was expensive," the word "It" is an example of what type of cohesive device?** *Answer:* Grammatical Cohesion (specifically, Anaphoric Reference). *Explanation:* Pronouns like "It" are grammatical items that link back to a previous noun.

Q69: What is the term for a word that is a specific member of a larger category (e.g., "rose" is a member of "flower")? *Answer:* Hyponym. *Explanation:* Hyponymy is the relationship between the specific word and its general class (superordinate).

Q70: A student uses the phrase "The main **question is how to proceed." The word "question" refers to the preceding discussion. This is a use of what?** *Answer:* Discourse-Organizing Word. *Explanation:* It summarizes the preceding text and signals the next step in the argument.

Q71: What is the core idea of **Communicative Competence (Hymes)?** *Answer:* Knowing not only the grammar but also when, where, and how to use language appropriately. *Explanation:* It's the difference between being able to form a correct sentence and knowing when it's polite to speak.

Q72: What is the term for the tendency of words to occur together more often than chance (e.g., ***strong tea*)?** *Answer:* Collocation. *Explanation:* Collocation is a key

part of native-like fluency, as it reflects habitual word pairings.

Q73: What is the purpose of Winter's **Vocabulary 3 (lexical items) in signaling larger textual patterns?** *Answer:* To signal the relationship between clauses and paragraphs using content words. *Explanation:* This includes words like *problem, solution, claim, evidence* that structure the flow of ideas.

Q74: The use of the word "thing" to refer to a complex idea is an example of what type of lexical cohesion? *Answer:* General Word. *Explanation:* General words are simple nouns used to refer to complex entities or ideas already established in the text.

Q75: Why is vocabulary teaching in a discourse-oriented approach not just about single words? *Answer:* Because words must be taught in context to develop the learner's lexical competence. *Explanation:* A word's meaning and appropriate use are determined by the surrounding text and social situation.

Lecture 13: Reference and Staging (Quizzes 76-90)

Q76: A book's title is "The Secret Life of a Spy." This title immediately forces the reader to interpret the main character's actions as secretive and deceptive. This is an example of what? *Answer:* Thematisation (or Staging). *Explanation:* The title is the most powerful staging device, setting the frame for the entire text's interpretation.

Q77: In the sentence, "This** is the issue: we have no money," the word "This" points forward to the problem. This is an example of what type of reference?** *Answer:* Cataphoric Reference. *Explanation:* Cataphoric reference creates suspense by pointing forward to the information that is about to be revealed.

Q78: A speaker says, "Look at **that!" while pointing to a bird outside. The word "that" is an example of what type of reference?** *Answer:* Exophoric Reference. *Explanation:* Exophoric reference points to something outside the text, in the shared physical context.

Q79: What is the term for the tendency to present events in the order they happened in time? *Answer:* Natural Order. *Explanation:* This is the default way we structure narratives, as it is the easiest for the listener to process.

Q80: A person describing their apartment starts from the front door and moves room by room. This is an example of following what principle? *Answer:* Natural

Order (aligned with Point of View). *Explanation:* They are adopting a stereotypical cultural pattern of an "imaginary tour" to facilitate the listener's comprehension.

Q81: What is the general term for any device that identifies the relative prominence given to various segments of a discourse? *Answer:* Staging. *Explanation:* Staging is the broader concept that includes thematisation, rhetorical devices, and other means of highlighting information.

Q82: In the sentence, "My friend, **Ali, is a doctor. **He** works hard," the word "He" is an example of what type of reference?** *Answer:* Anaphoric Reference. *Explanation:* Anaphoric reference points back to the previously mentioned entity ("Ali").

Q83: What is the risk of breaking the **Natural Order in a narrative?** *Answer:* It can confuse the listener and make the text incoherent. *Explanation:* The listener naturally assumes a sequence of events unless signaled otherwise.

Q84: What is the relationship between the **Theme of a clause and the **Rhyme**?** *Answer:* The Theme is the "point of departure" (what the speaker is on about); the Rhyme is everything that follows and develops the Theme. *Explanation:* The Theme sets the stage, and the Rhyme provides the new information.

Q85: What is the primary function of **Thematisation in discourse structure?** *Answer:* To provide a structural framework and constrain the interpretation of what follows. *Explanation:* By choosing the starting point, the writer guides the reader's understanding of the entire text.

Q86: When a speaker mentions the largest object in a room first, they are following the principle of what? *Answer:* Perceptual Salience. *Explanation:* We tend to mention the most noticeable or salient entity first in a description.

Q87: What type of reference is used when a writer uses the definite article "the" to refer to something assumed to be known in the culture (e.g., "the Prime Minister")? *Answer:* Exophoric Reference (Cultural Context). *Explanation:* The reference is outside the text but within the shared cultural knowledge of the reader.

Q88: The use of headings and sub-headings in a document is a common thematisation device that achieves what effect? *Answer:* Chunking the text into smaller, manageable segments. *Explanation:* Headings break the text into logical parts, aiding comprehension and navigation.

Q89: What is the term for the non-logical inference that assumes a causal relationship between two events simply because one followed the other? *Answer: Post hoc ergo propter hoc*. *Explanation:* "After this, therefore because of this." This is a common assumption in narratives following the natural order.

Q90: What is the relationship between the **Given information and the **Theme**?** *Answer:* The Theme is often related to the Given information (what is already known). *Explanation:* We usually start a sentence with what is known to smoothly introduce the new information (Rhyme).

Lecture 14 & 15: Methodology and Genre (Quizzes 91-105)

Q91: What is the core idea of **Discourse Ethics (DE)?** *Answer:* Ethical norms are grounded in the agreements reached through free, rational, and open discourse. *Explanation:* The morality of a rule is determined by the fairness of the discussion process that led to it.

Q92: A researcher records a naturally occurring argument between two people in a public park. This type of data is generally preferred because it is not influenced by what? *Answer:* The Researcher's presence (or Contrivance). *Explanation:* The talk was produced for a real-life purpose, making it a more authentic representation of social interaction.

Q93: What is the ethical obligation of a researcher to protect the identity of their subjects? *Answer:* Confidentiality. *Explanation:* The researcher knows the identity but must take steps to ensure it is not revealed to the public.

Q94: What is the main implication of the concept **"Genre as Social Action"?** *Answer:* Genres are tools used to achieve social purposes. *Explanation:* A genre is not just a form; it is a functional tool for doing things in the world.

Q95: Why is written language described as having the **"Thinness of the Written Sign"?** *Answer:* It lacks the immediate, multi-modal cues (tone, gesture) of spoken language. *Explanation:* The reader only has the letters on the page, making interpretation more challenging and open to ambiguity.

Q96: What is **Typification in the context of genre?** *Answer:* The process by which certain linguistic forms become standardized and expected for a particular social activity. *Explanation:* It's why all legal contracts look and sound similar—they follow a highly typified structure.

Q97: Which of Habermas's rules for ideal discourse ensures that all perspectives are heard? *Answer:* Everyone is allowed to question any assertion and introduce any assertion. *Explanation:* This rule establishes the equality of speech required for a rational consensus.

Q98: A researcher conducts a focus group to gather opinions on a new product. This type of data is classified as what? *Answer:* Contrived Data. *Explanation:* The talk was generated specifically for the research project, not for a real-life purpose.

Q99: What is the relationship between **linguistic orders and **social orders** according to CDA?** *Answer:* Linguistic orders reflect social orders, and vice versa. *Explanation:* The way people talk (linguistic order) is a direct mirror of the power structure (social order) in their community.

Q100: What is the term for the process where a text's meaning is interpreted differently when it moves from its original context (e.g., a scientific paper) to a new context (e.g., a political debate)? *Answer:* Discourse Travel (or Translation Border between Genres). *Explanation:* The meaning changes as the text is integrated into a new social activity system.

Q101: What is the primary ethical dilemma faced by researchers when maintaining confidentiality? *Answer:* The conflict between confidentiality and the scientific ideal of verifiability. *Explanation:* To protect identities, researchers may have to group data or modify values, making it impossible for others to perfectly replicate the study.

Q102: What is the main goal of **Genre Analysis?** *Answer:* To map the recurrent uses of more or less conventionalized forms of language. *Explanation:* It seeks to describe the typical patterns of communication in a community.

Q103: The idea that the knowledge and meanings expressed in situated utterances become part of the ongoing resources for future utterances is a principle of what? *Answer:* Discourse Dynamics. *Explanation:* Discourse is dynamic; every utterance contributes to the context for the next utterance.

Q104: What is the key element that makes the result of a Discourse Ethics process morally binding? *Answer:* The rational acceptance by all those affected. *Explanation:* The agreement is binding because it was reached through a fair, non-coercive process.

Q105: What is the term for the specific linguistic features (like tone, pitch, or accent) that are studied in the context of political discourse? *Answer:* Supra-segmental features (or Prosody). *Explanation:* These features operate “above” the individual sound segments and organize the flow of the message.
