Sociological Foundations of Education:

A Dynamic and Changing Society: As society continues to change it is important for school and people in charge of education specially at the policy level to look into that what needs to be change, how often it needs to be changed and the change must happen in a timely manner.

Society as a Source of Change: Society changes rapidly. Sometimes education cannot cope up with the fast-changing society Making the “Preparing for students for the world of Tomorrow” difficult. Think about what we (society) have today that we didn’t have last year. Knowledge as an Agent of Change

Schools as Agents of Change: we talked of the 3Rs only which was reading, writing and arithmetic. 3Rs have gone; focusing today on only those 3Rs will not help our students. Literacy today is more than simply being able to read, write and being able to do simple quantitative skills. Today we talk off: Cultural literacy, Scientific literacy, Computer literacy, Technological literacy, Information literacy.

Knowledge as Agents of Change:

Has knowledge grown? Of course, it has, thought of when you went to school and what you are teaching your students is not the same.

Explosion of knowledge: Quantity of the material has increased, not sure about the quality but certainly the quantity of the material that a teacher is expected to teach is increased and that will keep on happening. Knowledge will increase when new information is created.

What knowledge is of most worth? All the information is not needed by anyone, how much of that new information are we going to give to our students.

Organizing knowledge, subject-cantered: Because of the growth of knowledge, knowledge has been organized into subjects e.g., English, physics, mathematics etc.

Areas of knowledge: Now there is a need to guide the students in areas of knowledge that which areas are of their keen interest.

Sociological Foundations of Education: Main elements: Theories about the relation between school and society. Whether schooling makes a major difference in individual’s lives. How schools influence social inequalities. How school processes affect the lives of children, teachers, and other adults

Individual Actions Individuals can take one of the two types of actions. In society, the reasons you behave in a particular way is because an external force makes you do it. For example, you could not pass the red signal; you have to stop because following the rules of presence of police makes you do it. This is known as “**determinism**” (Determined by external forces)

The other way is shaped by the individual’s “**Voluntarism**”. You behave in a particular way because that’s the way you know the right way to behave and this is known as voluntarism. You voluntarily behave in a particular manner not because an external force is demanding to behave in a particular way.

Theoretical Perspectives

Functional Theories: stresses the interdependence of the social system, how well the parts are integrated with each other.

Emile Durkheim: education in all societies of critical importance in creating moral unity, social cohesion, and harmony moral values are the foundations of society

Functionalists: Assume that consensus is the normal state in society and conflict represents a breakdown of shared values. -Educational reform is to create structures, programs and curricula that are technically advanced, rational, and encourage social unity.

Conflict Theories- -The glue of society is economic, political, cultural, and military power. -Ideologies legitimate inequality and unequal distribution of goods as inevitable outcome of biology or history. -Whereas functionalists emphasize cohesion, conflict theorists, emphasize struggle in explaining social order. -Karl Marks is the intellectual founder of conflict theories.

Conflict Theories-2 -The “Achievement Ideology” of schools disguises the real power struggle which correspond to the power struggles of the large society. -Educational credentials such as college

diplomas primarily status symbols rather than indicators of actual achievement to secure more advantageous places in employment and social structure. - **“Cultural capital”** passed on by families and schools pass on social identities that either help or hinder life chances.

Interactional Theories -Primarily critiques and extensions of functional and conflict perspectives. -It is exactly what one does not question that is most problematic at a deep level e.g., how students are labeled “gifted” or “learning disabled” -Speech patterns reflect social class backgrounds and schools are middle-class organizations, disadvantages working class children.

Effects of Schooling on Individuals -Knowledge -Attitudes -Employment

Inside the Schools: -Schools from an organization point of view Effects of school size. -Curriculum expresses culture. -Tracking in public schools, rarely in private schools.

Teacher Behaviour inside classroom. -A teacher has 1000 interpersonal contacts with students each day. -A teacher at any given time performs multiple roles; instructor, disciplinarian, bureaucrat, employer, friend, confident, educator Can lead to “role strain”

Student Peer Groups and Alienation: -Students in vocational programs and headed towards low status jobs most likely to join a rebellious subculture. -Average 12 years old has seen 18000 television murderers. -**Four major type of college students:** careerists, intellectuals, strives, unconnected. -Schools are far more than collections of individuals; they develop cultures, traditions, and restrains that profoundly influence those in them.

Education and inequality: The following must be eliminated from the society in order to bring equality: Inadequate schools, Tracking, De facto Segregation, Gender discrimination.

Bernstein’s Theory: -Bernstein talks about **code** which is a regulatory mechanism that determines what happens where? In education, he talks of two things; curriculum and pedagogy. -**Code** refers to a “regulative principle which underlies various message systems, especially curriculum and pedagogy.” -Curriculum defines what counts as valid knowledge. Pedagogy defines what counts as valid transmission of knowledge and evaluation defines what counts as valid realization of knowledge on the part of the taught. -Bernstein’s work on pedagogic discourse is concerned with the production, distribution, and reproduction of official knowledge and how this knowledge is related to structurally determined power relations.

Labelling Theory-1

- Labeling theory is interested in *why* people are labeled and who it is that does the labeling.
- **Deviance** is functional to clarifying group boundaries, providing scapegoats, creating out-groups who can be the source of furthering in-group solidarity.
- **“The first dramatization of the ‘evil’** which separates the child out of his group Plays a greater role in making the criminal than perhaps any other experience He now lives in a different world. The person becomes the thing he is described as being.”
- **“The secondary deviant** Is a person whose life and identity are organized around the facts of deviance.” It is teachers who use labels such as “bright” or “slow”.

Labelling Theory-2: Race and ethnicity are powerful factors in generating teacher expectations. High expectations in elementary grades are stronger for girls than boys. “If men define situations as real, they are real in their consequences.” Self-Fulfilling Prophecy. The teacher expectations are not automatically self-fulfilling.

Processing Social-Educational Priorities: Education for All; child-centered, activity-centered, experience centered. Focus on Academically Talented Students. Curriculum to challenge the “Smart” students. Focus on Disadvantaged students.

Pre-literate Societies (before writing) 7000 BC – 5000 BC: pre-literate societies are societies and communities that existed before writing began. So, obviously the means by which information or stories were transmitted was oral. **Goals of education:** To teach survival skills, -Teach group harmony **students:** -All children, -No grouping according to age, -All children get together and listen to what people had to tell them. **Instructional methods:** Informal methods, -Children imitate adults

Curriculum: -Practice hunting, -Fishing, -Songs, -Poems, -Dances. **Agents:** Parents, -Liberal leaders, -Religious leaders. **Influence on Education:** -Informal, -Transmission of skills

Influence of Chinese (3000 BC – 1900 AD): Educational goals: key terms in this goal:

Elite means everybody was not meant to be educated. A common man did not receive any education, **Secondly**, they had to govern the empire. They had to be leaders and strong people up at the top and front. This was the sole purpose of giving education only to the elite. **Another** limitation was that the education these people got was limited to Confucian principles; only Confucius thought was transmitted to the next generation. **Students:** Males of upper class. **Instructional Methods:** Memorization and recitation. **Curriculum:** Confucian Classics. **Agents:** Government officials. **Influence on Education:** Written examination for civil service

Ancient Indian Society 3000 BC – Present India: Educational Goals: To learn behaviour and rituals based on Vedas. **Students:** Males of Upper classes. **Instructional methods:** Memorizing and interpreting sacred texts. **Curriculum:** Vedas and religious texts. **Agents:** Brahmin Priest scholars. **Influence on education:** Cultural transmission and assimilation, spiritual detachment

Influence of Egyptians (3000 BC – 300 BC): Educational Goals: To prepare priest according to scribe for the empire. **Students:** Males of upper class. **Instructional Methods:** Memorization and copying texts. **Curriculum:** Religious or Technical texts. **Agents:** Priest and scribes. **Influence on education:** Restriction on educational controls to priest elites

Influence of Greek (1600 BC – 300 BC): Educational goals: To cultivate civic responsibility. **Students:** Male children ages 7 to 20 years. **Instructional Methods:** Memorization and recitation in primary schools, lecture, discussion, and dialogue in higher schools. **Curriculum:** Athens: reading, writing, , drama, poetry, music, Sparta: Drill, military, songs and tactics. **Agents:** Athens: private teachers, philosophers. Sparta: military teachers. **Influence on education:** Athens: well rounded, liberally educated person. Sparta: Concept of military state.

Influence of Romans (750 BC – 450 AD): Educational Goals: Develop civic responsibility for the empire, -Administrative and military skills. **Students:** Male children ages 7 – 20. **Instructional Methods:** Memorization and recitation in lotus; declamation in rhetorical schools' declamation is the ability to create and give a speech. **Curriculum:** Reading, writing, arithmetic, law and philosophy **Agents:** Private schools and teachers, schools of rhetoric. **Influence on Education:** Practical administrative skills, -Relate education to civic responsibility

Influence of Arabic Society (700 AD – 1350 AD): Educational Goals: Cultivate religious commitment to Islamic beliefs, -Expertise in mathematics, medicine and science. **Students:** Male children of upper-class ages 7 – 20. **Instructional Methods:** -Memorization and recitation in primary schools, imitation and discussion in higher schools. **Curriculum:** Reading, writing, arithmetic, religious literature, scientific studies. **Agents:** Mosques. Court schools. **Influence on Education:** Arabic numerals and computation, medicine and science materials

Influence of Medieval on Education (500 AD – 1400 AD): Educational Goals: Develop religious commitment, knowledge, and ritual; establish social order, prepare for appropriate rules. **Students:** Male children of upper class, -Girls and women entering religious community ages 7-20. **Instructional Methods:** Memorization and recitation in lower schools, -Text analysis discussion in higher school and universities. **Curriculum:** Athens: reading, writing, arithmetic, philosophy, theology, military and chivalry. **Agents:** Parish, Chantry, Cathedral schools, Universities, Knighthood. **Influence on Education:** Structure and organization of the University, -Institutionalization of knowledge

Influence of Renaissance Period (1350 AD – 1500 AD): Educational Goals: Cultivate Humanist experts in Greek, and Latin classes; prepare people to serve dynastic leaders. **Students:** Male children of aristocracy and upper classes, ages 7-20. **Instructional Methods:** Memorization and translation, and analysis of Greek, classical literature, poetry and art. **Curriculum:** Latin and Greek classical literature, poetry and art. **Agents:** Classical Humanists educators and schools like Lycée, gymnasium and Latin school. **Influence on Education:** Emphasis on literary knowledge, excellence and style in classical literature,

Influence of Reformation period (1500 AD – 1600 AD): Educational Goals: Cultivate a commitment to a particular religious denomination, and general literacy. **Students:** Boys and Girls ages 7-12 in vernacular schools, -Young men of upper class in humanist schools. **Instructional Methods:** Memorization drill, translation and analysis of classical literature in humanistic schools. **Curriculum:** Reading, writing, arithmetic, catechism, and rituals. -Latin and Greek theology. **Agents:** Vernacular elementary school for general public, -Classical schools for upper class. **Influence on Education:** Commitment to universal education to provide literacy for everyone.

Important Educational Theorists-1,2

1-Confucius (Chinese)	Philosophy was: Developed ethical system based on hierarchy, human relations and roles, emphasized order and stability. View of Human Nature: Human beings need the order of a stable society. People accept duties that come with their station life.
Socrates	Philosophy: Philosophical idealism, political conservatism. View of Human Nature: Humans define themselves by self-examination
2-Plato	Philosophy: Philosophical idealist, social conservatism, added intuition. View of Human Nature: Humans can be classified on intellectual capabilities
Aristotle	Philosophy: Realists, views society based on realism and observation. View of Human Nature: Humans have the power of rationality to guide their conduct

Ancient Turks-1 (Muslim World)- “Alp” concept was widespread (Alp is the kind of human beings defined by the Turks). -Alp human being is defined as: warrior, wise, extroverted, nomad, gaining knowledge from ancestors and old wise people. -In Ancient Turks (before Islam) there is no gender difference in educating youngsters. -When Western education is being influenced by Christianity, the eastern education was being influenced by Islam. -The “God” and theology concepts encapsulated education. -In this period, an “absolute truth” concept gained importance and taught to people in a domestic way

Ancient Turks-2: -Turks accepted Islam in 10th Century. -**Madrasas** opened in Samarkand, Bukhara, Tashkent, Kashgar. -**Education** was organized and structured in these schools. -**Subjects:** religion and social studies were taught. -**Agents:** Farabi, Ibn-e-Sina, Biruni were some examples that were raised in these institutions. -They synthesized philosophies from Turk-Islam traditions, Ancient Greek and Roman Philosophers as well. - period lasted for Gyokuros, Uyghurs, Karamanlis, and Ottomans.

Eastern Philosophers:

Farabi (870 - 950)	Philosophy: Base for human nature is knowledge. Human mind can distinguish right from wrong through wisdom. View of Human Nature: The ultimate knowledge is innate. Educational Philosophy: Distinguished teaching from education. Teaching: Reveal scientific knowledge and art. Education: create theoretical virtues in society, education must be easy to hard, simple to complex, near to far
Ibn-e-Sina (980 - 1037)	Philosophy: Moral virtues are as important as knowledge itself. View of Human Nature: Children are innocent and clean from the start, should be taught moral values. Educational Philosophy: Children should be taught without pressure; children should be taught from ages 6 -14. Agents: should be religious, honest, wise persons that can recognize children’s abilities
Biruni (973 - 1051)	Philosophy: in order to love each other humans should learn and respect each other’s language, religion, traditions and thinking. View of Human Nature: Humanistic perspective. Educational Philosophy: He was expert in astronomy, physics, botany, pharmacology, geography. Biruni believed scientific work should be cleaned of magic, superstition and anything that opposes logic

Sulcus Period: -Madrasas should have a certain period of education. -Memorization as well as discussion were methods used to teach. -Both religious and vocational oriented education. -Children were taught Islamic educational virtues: cleanliness, generosity, good will, and humanity. -Famous

names in this period include Maulana Jalal-ud-din Rumi, Yunus Emre. -Poetry was an important part of education and God and human love issues were the main subjects.

Ottoman Period: -Madrasas were important educational institutions and were developed further in Ottoman Period. -Rich people as well as government build Madrasas everywhere. -The structure was primary, middle and high school. -Only Sunni Muslim males were accepted in madrasas, no girls were allowed in the madrasas. -The teachers were called “Madaris”. -Religious, philosophical subjects as well as literature, science, math, and languages were taught.

Structure of Ottoman Period 16th Century: -Ottoman schools were divided into two: Maktap and Madrasa. -Maktap: To train people to serve the palace, government and military people. -Fateh opened “Ende run” Palace School which included talented children of non-Muslim families. Not all children of non-Muslim families were admitted in these schools but those who are talented and show their potential. -The language for education was Arabic, but Turkish and Persian were also taught.

Theorists of this Period (Industrialization)-1,2:

Pestalozzi (1746-1827)	believed that education should be for everyone. Social education: Learning through experimentation, -Education is for everyone.
Herbart (1776 - 1841):	He says that you need to manage, educate and discipline young people. -The purpose of education is to serve individuals. -Attention was focused on the individuals.
Frobel (1782-1852):	Focused on pre-school education. -Emphasized that children should be educated from 3-4 years. -Founded “Kindergarten”
Tolstoy (1828-1910):	He believed in Education for freedom. -Suggested master-apprentice relation for teacher-student. -He was extremely against physical punishment and memorizing.
John Dewey (1859 - 1952):	-Education for employment and life. -Education is life, it is not preparation for life. -Education teaches a child to think through action. -Teacher must be a guide to students not a dictator.
Maria Montessori (1750-1952):	Sensory education. Used mostly on early years education. -Learning through self-discovery and interest. -Uninterrupted play/work time, loosely structured classrooms

Ottoman Education-1: Between 1779-1839 was a reform period in education. First in military education, military schools were opened. In 1824, Al Mehmet made primary education mandatory. Rustiye mekteplerie, Sultani and Darulfunun) were the Turkish names for high schools. 1856 Islahat Farmani was formed, that is changes in education. Money will be collected from public for education

Ottoman Education-2: Kanun-I-Esasi: mandated that education is for everyone. There will be no interference on religious education. Education is free for public. Increased freedom in press. Higher education for girls and girls started working in government offices.

164 – 20th Century Education

Europe and America: Education started being considered as a field. -In 1950s Skinner with his experiments in education published education findings. -In 1980s, constructivist, multiple intelligence, brain-based learning and life-based humanist learning gained importance. **Latest Developments:** Teacher education, -1997 educational faculties, -Education in post graduate education, -Constructivist approach, -Multiple intelligences, -Capital punishment banned at schools

Ghaznavi Dynasty (0970 - 1122): About 400 scholars, poets, scientists, and geographers were a glory of the court of Mahmood Ghaznavi. -Firdausi, a poet, wrote the “Shah Nama” during that time. -Attabi, a historian, wrote “Kitab-Ul-Yemeni”. -Alberuni, a philosopher, mathematician, geographer, and astronomer, made a deep study of the Hindu culture, customs, religion and wrote “Kitab-ul-Hind”.

Ghuri Dynasty (1192 - 1206): Muhammad Ghuri was not fond of art and literature; however, he took steps to spread Islamic education. -To achieve this, he got a service of many religious scholars and saints. -He believed in training his slaves.

Slave Dynasty (1206 - 1290): Qutab-ud-Din Aibak built many mosques and cities that became the centers for worldly as well as Islamic education. He was very generous and kind to scholars and religious saints. -Altmash was very fond of Art and Literature. -Ghia's-ud-din Balaban was very appreciative of scholars.

Khilji Dynasty (1290 - 1321): -Jala-ud-Din Khilji was very appreciative of scholars, wise people, and artists. -He himself was a good poet. -He set up a library in Delhi and appointed Amir Khosrow as its supervisor. -Ala-ud-Din Khilji himself was not a literate man but he patronized art and literature.

Tughlaq Dynasty (1320 - 1414): Ghia's-ud-Din Tughlaq was the founder of this dynasty and believed in art and literature. -Ibn-e-Battuta, the famous historian, toured India from 1333 to 1342. He wrote about his findings and discoveries extensively.

Syed Dynasty (1414 - 1451): -This reign was categorized by lawlessness and disorder. -Most time was spent on repressing the revolts and thus art and literature suffered. -During the time of Mubarak Ali, some literary work was done. "Mubarak Shahi" was written during this time.

Lodhi Dynasty (1451 - 1526): Bahlol Lodhi was himself not a literate man but he was much appreciative of scholars of various disciplines and also rewarded them. -He patronized literary activities. -Sikander Lodhi had a high literary taste. Persian language flourished in his reign. -Ibrahim Lodhi was an ideal man. Not much attention was given to literary works during his reign.

Mughal Dynasty (1526 - 1857): In their reign, art and literature flourished and made great progress. -Numerous books of foreign languages were translated into Persian. -Many biographies and historical events were written. -During this time, some famous scholars

Role of Sufis: Muslim Sufis played an important role in spreading Islamic education in India. -Many Scholars wrote famous books. -They focused on religious and secular education. -Scholars and religious saints from other countries like Afghanistan, Iran, Turkistan, Arabia, Syria and Egypt kept visiting India.

Educational Conference 1947: Under the dynamic leadership foreside and vision of Quaid-e-Azam Muhammad Ali Jinnah, soon after the creation of Pakistan the first educational conference was held in Karachi in December 1947.

Two Nation Theory: Since Pakistan came into being on the basis of Two Nation Theory, the conference recommended that the educational system should be based on this and a society be created that should reflect Islamic education.

Educational conference 1947 - 1: Promote National Unity: The Conference strongly recommended to promote a passion of national unity among all people of the provinces to avoid damage by provincial prejudices to the progress of the country. **Establishment of a Democratic Society:** A recommendation was made to set up a democratic society in the country and there was a stress to train the citizens in the civic matters so that they may be able to know about their rights and duties. **Urdu as a Medium of Instruction:** Urdu has gained a high-ranking status in the subcontinent because this was the only language that was spoken and understood. Therefore, the conference recommended to adopt it as the medium of instruction as a means of unity among provinces.

Educational conference 1947 - 2: English as Means of Instruction be Abolished Gradually: English language as a means of instruction was seen as a memory of the English rule over India. After getting freedom, there was a need to abolish English as a medium of instruction. The conference recommended the abolishment of English Language gradually. **The Formation of Central Educational Consultation Board:** The conference recommended the formation of a Central Educational Consultation Board which should comprise of provincial ministers of education dphis; members of the National Assembly and eminent educationists of all provinces.

Educational conference 1947 - 3: Arrangement of Training of Teachers: To use and to act upon modern teaching methods, training of teachers is very necessary. The conference made strong

recommendation in this regard. **Training for good citizenship:** The conference recommended training the children to become good citizens of Pakistan and to create in them a sense of good citizenship to promote an exemplary society. **Setting up for an Inter Disciplinary Board:** In order to coordinate the programs of Universities of the Country in terms of educational and research, the conference recommended for setting up of an Inter University Board.

Educational conference 1947 – 4: Reorganization of Technical Education: The conference advised to reorganize the technical education in Pakistan. For this purpose, Industrial Research Council and Technical Education were recommended to be set up. **Increase in Primary Education Period:** The conference recommended the period of primary education to be increased from four years to five years. **Women Education:** The conference stressed women education and recommended coeducation at primary stage. **Adult Education:** The conference stressed adult education to increase the rate of literacy in the country in a very short period and therefore recommended to take speedy measures to arrange for adult education.

Educational conference 1947 – 5: agreed upon the following objectives of education:

The preservation of Nazaria Pakistan. -Training for good citizenship. -Training for Democracy. -Urdu as Medium of Instruction. -Primary Education compulsory for all. -Compulsory religious education. -Gradual abolition of English as Medium of Instruction. -Reorganization of Technical Education

National Education Commission 1959 (Primary Education) Objectives: According to the Commission, primary education should enable a student to read and write. To create a sense of self confidence and curiosity in the child. To create a passion for hard work in the child. To equip the child with information and skill. To create a love for physical work and games.

Primary Education 1959 (Curriculum): The curriculum should be according to the need and ability of the child. Practical and Planning methods be used for teaching children. National Language be taught to all children. A passion for patriotism be created in children. National Anthem be sung in the morning assembly and Pakistan flag be hoisted.

Organization: Primary Education be organized at the district level. -An education committee be set up in every district with Deputy Commissioner as its Chairman and the District Education Officer along with four members. -Every district be divided into Union Committees which should consist of three members nominated by the Deputy Commissioner of the District.

Financing: Land, property and equipment of primary schools should be the responsibility of the people. -Half of the total expenditure of primary education should be borne by the provincial governments and the other half be met through district taxes.

Primary Education 1959 (Facilities for Teachers): Teachers of Primary Education should be provided some professional training. Refresher courses be arranged now and then for the teachers. Rewards in cash or certificates be given to teachers showing better working. For the first three classes of primary education, female teachers be preferred to male teachers. Residence arrangement for female teachers be made.

Secondary Education 1959 Objectives: -To create the freedom of thinking among children. -To create a sense of research and curiosity in children. -To create a sense of leadership in children. -To create an aesthetic sense in children. -To create interest for taking part in games in children.

As a citizen: To create a social responsibility sense among children. -To create a cooperative spirit among children. -To develop a habit among children to take part in social welfare. -To prepare children for practical life needs of the day. **As a worker:** -To create a sense of dignity of work. -To provide facilities for professional guidance so that children can choose skills and profession according to their interest and taste. **As a Patriot:** -To equip children with education that reflects Islamic values. -To create a passion among children to feel proud of being Pakistanis. -To give knowledge of cultural heritage to the children.

Secondary Education 1959 – 1: will consist of three stages: From sixth to eighth class Middle. -From ninth to tenth class Secondary. -From eleventh to twelfth class Higher Secondary

Curriculum: Curriculum should consist of compulsory and optional subjects. -Optional subjects may be placed into many groups so that children can choose based on their taste and interest. -Science, Mathematics and National Language be given more stress. -Religious education be made compulsory at middle stage. **Examination System:** of secondary stage, be reorganized. Examinations should be held after tenth and twelfth classes. -Examination record of all examinations be kept safe for certain period. -Secondary Education Boards be allowed to issue certificates. -Private students should have the same syllabus as those of the regular students and they should be allowed to sit in the examination.

Secondary Education 1959 – 2: Service Conditions for Teachers: At the secondary stage, trained teachers be appointed. -Refresher courses be held during service. -Education year will consist of forty weeks. Summer vacations for two months, winter vacations for 10 days. -Casual leaves of twenty days be decreased to five days only. -Secondary schools should be provided with the building, playground and necessary equipment.

Higher Education 1959 – 1: Duration: Higher education has a separate status of its own. Therefore, intermediate classes should be handed over and shifted to Secondary Education Boards. Every University should fix a standard for admission by itself. **Syllabus:** The syllabus should be prepared according to the needs of the modern age. -A separate department for teaching of world's important and current languages according to the industrial, commercial, and administrative and defence needs be opened. -Modern disciplines like Business Administration, Journalism, Sociology, Home Economics etc.

Higher Education 1959 – 2: Examination System: 75% marks on the basis of external examination and 25% on internal assessment. Examination should be organized in such a manner as to assess the ability rather than memory of a student. **Research and Training:** Research work should be made compulsory for university teachers. For research and teaching programs, a study committee be set up in every university. Research done in other universities should be awarded for the benefit of teachers.

Higher Education 1959 – 3: Service and Facilities for University Teachers: facilities be provided to the University teachers and the students engaged in research work. University Academic year should be thirty-six weeks. Every University teacher should devote 1440 hours per year to teaching. Teachers should be promoted on the basis of high performance. **Professional Education:** Admission criterion engineering colleges should be at least FSC. (Pre-Engineering). The standard of education for admission in law colleges should be at least BA/BSC. Commerce institutions be opened in the country to teach official matters, banking and insurance.

Technical Education 1959 - 1: -Technical education be made part of education system. -Polytechnics in the country be upgraded to technical colleges. -Vocational schools should be spread widely in the country. -Technical Education Board be set up for the examination of technical subjects.

Technical Education 1959 - 2: The students be trained as apprentices in industries. The students should be given general education up to eighth class. Professional courses for students be part of the curriculum and should be included so that students may be able to choose subjects according to their interest and taste.

National Education Commission 1959 (Critical Analysis): The National Education Commission ignored the Islamic objectives while determining the educational objectives. The Commission recommended to make good citizens and good scientists but to make them good Muslims did not present a solid proposal. Instead of bringing about a revolutionary change in administrative structure, the old structure was recommended with some minor changes which could not produce desired effects

National Education Policy 1970 - 1: Also known as “The Noor Khan Report”, because of the extensive work of one individual in the process of formulating this policy. **Guiding principles and objectives for Growth of Education:** Education should play a central role to sustain Islamic values and national unity. Scientific and technical education be given attention to fulfil the economic needs of the country. The role of the teacher is decisive in improving the standards of education.

National Education Policy 1970 – 2: Primary Education: This has been thought as a basic principle in the government policy. It was recommended to make common the primary education up to class five by 1980 and then be raised to the level of class eight. Education of girls was to be encouraged. **Secondary Education:** Scientific, technical and professional education has been stressed. A target of education of four hundred thirty thousand (430,000) students has been fixed in the plan of 1970. **Higher Education:** The curriculum has been stressed to be reorganized to improve higher education. New colleges be opened for science education. Centres for excellence be opened in the Universities where research work be done. **Adult Education:** In the Education Policy of 1970, adult education has been stressed much and the setting up of an Education Corps has been recommended.

National Education Policy 1970 – 3: Reorganization of curriculum: Curriculum Research Committee centers at the provincial level be set up and scientific and technical education be included at every stage. In addition to this, education as a subject be included in the curriculum as an optional subject. **Examination System:** The existing system of examination has been thought in the report as unsatisfactory because it does not measure the ability of students. It therefore needs to be reformed and restructured.

National Education Policy 1970 – 4: Training of Teachers: It has been recommended in the report that one hundred and thirty-eight thousand (138,000) teachers be provided training and one hundred and fifty thousand (150,000) teachers be trained during services. **National Language as Medium of Instruction:** It has been recommended in the report that a commission be set up to make the national language the medium of instruction. Textbooks be published in Urdu language.

National Education Policy 1970 – 5: Scientific and Professional Education: Scientific Research Centres be set up in the country. Training centres in industries be opened for professional education. **New Universities:** It has been recommended in the report that the number of students in secondary schools has increased to the level that students find difficulty in getting admission in the present universities. Therefore, according to the phased program, new universities be established. **University Grant Commission:** To hold communications with all universities. To determine the financial needs of the universities and to distribute the amount of grant.

National Education Policy 1972 – 1980: Objectives of education: -To preserve and promote the ideology of Pakistan. -To establish a National Unity by promoting social and cultural unity through education. -To promote qualities of leadership among students. -To create a sense of dignity of labor

National Education Policy 1972 – 1980 (1): Free and Compulsory Education: In the policy of 1972, education was made compulsory at the primary level for children and it was announced that in October, 1972 education up to middle level will be made free and in October 1974 it will be free up to matric level. **Technical Education:** It was recommended that polytechnic institutions be upgraded to polytechnic colleges. -The students will be provided two years of practical training after passing a three-year diploma course. -Diploma holders from polytechnics be allowed b-tech degree after passing a course of one year.

National Education Policy 1972 – 1980 (2): Nationalization of Institutions: -All private institutions were nationalized on October 1, 1972. The owners of these schools were paid no money or any other compensation. -It was a great deed of course because in this way privately managed schools and colleges had been deprived of doing any injustice to servants and teaching staff.

National Education Policy 1972 – 1980 (3): Facilities and Training of Teachers: Refresher courses and training abroad for teachers were to be arranged. -In addition, a School Service Academy was proposed to be established on the pattern of Civil Service Academy. -The number of teachers was insufficient, therefore, education as a subject be given proper attention and students graduating with this subject to be provided job of teacher.

National Education Policy 1972 – 1980 (4): Facilities for Students: -Much attention has been given to students in this policy. -Education up to matric for all students was made free. -Students were allowed to have loans from banks to be returned in instalments after getting jobs.

National Education Policy 1972 – 1980 (5): Setting of New Universities: -There were seven universities in the country in 1972. -In Baluchistan, a university was opened. -In addition, for medical

education, three new colleges one each at Karachi, Larkana and Nawab Shah were opened. **Centres of Excellence:** -Centres for Excellence were to be set up in the universities to provide chance and facility of research to able and intelligent students. -The main aim of these Centers was to produce experts in the field of Chemistry, Physics, Fishery and Water Outlets. **National Professorship:** The policy stressed to start the plan of national professorship so that able and intelligent professors should not leave teaching jobs because of low salaries in colleges to join administrative posts having more benefits.

National Education Policy 1972 – 1980 (6): New Boards Be Set Up: The existing Secondary Boards of Education were not sufficient to meet the needs of the students. So, it was decided to set up new boards to make the system of examination easier and more effective. **Amendment in University Ordinance:** It was said in the educational policy that the infamous University Ordinance be amended to bring it in line with democratic law-making system. The autonomous position of universities be restored. **University Grants Commission:** The Commission of 1959, recommended the establishment of University Grants Commission. In the report of Noor Khan in 1970, it was again recommended. In the Policy of 1972, it was established practically. **Religious Education:** Islamiyat was made compulsory up to matric level and it was decided that in the textbooks of Islamiyat nothing repugnant to the teaching of Islam should be included.

National Education Policy 1972 – 1980 (7): Critical Analysis: Instead of opening public schools for the elite class, government opened hundreds of schools and colleges for the middle class. Millions of teachers and other servants in the privately managed schools were saved from the exploitation of the management of these schools. National book Foundation was set up to provide students cheap and quality books.

National Education Policy 1972 – 1980 (8): Critical Analysis: Many universities were established in the country, Jamia Islamia, Bahawalpur, Agriculture College Tandon Jam, NED College Karachi, Jam-Shoro Educational College

National Education Policy 1978 – 1: To create a love and affinity among public and students of Pakistan for Pakistan. To create a sense among students that being Pakistani, they are members of Islamic world at the international level. To prepare such citizens well equipped with the Ideology of Pakistan. To build the character of people and individuals in the light of Quran and Hadith.

National Education Policy 1978 – 2: Objectives of Education: To create a passion and discipline in the new generation. -To promote scientific, professional and technical education in the country. **Basic of Islamic Education:** The foundation of educational system of Pakistan was based on the Islamic Ideology of Pakistan and Muslim Nationalism. The aim was to mould the character of individuals into Islamic world so that an exemplary society be created. **Universal Primary Education:** The target was to open 13,000 primary schools so that by 1992 all children of the country could get admission in primary schools. -A target of opening 1,000 workshop schools was also fixed. The aim was to teach children different domestic handicrafts and skills so that they might become useful members of the society. **Secondary Education:** 1,000 middle schools were to be upgraded to secondary schools and 200 new secondary schools were to be opened. -This would increase the number of students from 1,800,000 to 2,800,000 at the secondary level.

National Education Policy 1978 – 3: Higher Education: It was decided to provide new buildings and necessary equipment up to 1992 to encourage research at the university level. It was also decided that expenditures of universities will be met by the central government. **Compulsory Teaching of Islamiyat, Pakistan Studies and Arabic:** In every sector of education, national and Islamic identity must be stressed. At the intermediate level, teaching of Islamiyat and Pakistan Studies was made compulsory. Arabic language was also considered necessary being language of Quran and Hadith. **Adult education:** opening of 10,000 centres for adult education was proposed. - centres will be equipped with necessary equipment with the help of UNESCO and 10,000 television sets will be provided.

National Education Policy 1978 – 4: Adult Education: Allamah Iqbal Open University will prepare programs for adult education through Radio and TV. -It was expected that the rate of literacy will become 35% in 1992 and it will be 100% in 2010. **Women Education:** Women education is important

for every nation. **According to Abraham Lincoln:** “When you educate a man, you educate an individual only; but when you educate a woman, you are actually educating the whole family.”

National Education Policy 1978 – 5: National Education Council: A committee consisting of nine members was proposed to be set up to work as advisory body at the higher stage. The members of the Committee include Secretary Central Ministry of Education. **Special Education for Disabled:** It was proposed that the central government will arrange and plan such measures as to make the disabled, deaf and dumb, mentally retarded and the blind to become useful members of society by learning different suitable skills. **National Technical Teacher Training College:** In the educational policy of 1978, technical education was specially stressed upon, therefore, on the national level, the establishment of a College for Technical Teacher Training was recommended.

National Education Policy 1978 – 6: Why target for literacy was not met: Reduction in the amount allotted for education. -Opening of new primary schools. -Less increase in number of students. -Less facilities for Teachers.

National Education Policy 1992 – 1: Aims of Education: To promote Islamic values through education. -A large number of educated men and women will be prepared to bring healthy changes in society. -A trend of critical thinking will be produced in students instead of learning by rote. -A practical type of education will be given to the students to enable them to create means of livelihood.

National Education Policy 1992 – 2: Primary Education: to be made compulsory and free for all. -At least two rooms and five teachers should be a primary school. -Within the passage of time, the primary education be converted into basic education. -Women teachers should be appointed in the primary schools gradually to replace male teachers

National Education Policy 1992 – 3: Secondary Education: At schools' level, two types of institutions be established. -From class 1 to high school education, the syllabus should be of twelve years duration. -Higher secondary education will be delegated to the school section instead of colleges. -In high schools, laboratories for science subjects shall be established separately.

National Education Policy 1992 – 4: Higher Education: Special funds be provided for the departments doing research work. -Twenty new universities will be opened next ten years and these will be the private sector universities. -The cooperation and relationship of Pakistani Universities with foreign universities be strengthened.

National Education Policy 1992 – 5: Higher education: At the degree level, three years honors courses be introduced so that students may learn practical skills and such like disciplines.

Educational Technology: Educational technology, educational equipment and information technology will be used to promote education and use of media will be made to give formal and informal education to the public. **Education system:** Some revolutionary proposals were offered to check malpractices in the examination branch, examination system and examination centers.

National Education Policy 1992 – 6: Education for Rural Development. National Testing Service

National Education Policy 1998 – 1: Objectives of Education: Quranic, Islamic and spiritual education must be an integral part of curriculum at all levels. -Standard of technical education be raised to provide the professional and skilled people with more chances of employment.

National Education Policy 1998 – 2: Objectives of Education: All schools in the country should have facility of computers in classrooms to be used for instruction. -At present, the educational budget is 2% of the GNP of the country. -This shall be increased and an attempt will be made to increase it continuously to reach 5% of GNP of the country.

National Education Policy 1998 – 3: Primary education: Existing facilities to be availed fully and new facilities to be provided. -Media to be fully used for promotion of elementary education. -Poor students will be provided books and notebooks free of cost at the beginning of the educational year.

National Education Policy 1998 – 4: Secondary Education: A model high school or a higher secondary school should be opened in every district where O and A level education be given.

National Education Policy 1998 – 5: Higher Education: Admission in higher education institutes be done on merit basis; for this purpose, an NTS test be used. -Colleges having good reputation will be allowed to have their own syllabus.

National Education Policy 1998 – 6: Higher Education: Degree colleges will be allowed to affiliate themselves with a university of their choice. -In big institutions Centres for Advanced Studies and Research be established.

National Education Policy 1998 – 7: Higher Education: Honours programs at the BA/BSc level will be introduced which will consist of three years period after intermediate and at the time of admission to a university, such honors degree holders will be preferred.

Constitution of Islamic Republic of Pakistan 1973 Article 37 – b says: “The State shall remove illiteracy and provide free and compulsory secondary education within minimum possible period.”

Concurrent Legislative List may include: Curriculum, syllabus, planning, policy, centres of excellence, standard of education and Islamic education. Moving from there in 2000 we turned into a new millennium. Pakistan also put forth what we called “Millennium Development Goals”.

Millennium Development Goals 2001: Ensuring that by 2015 all children, particularly girls, children in difficult circumstances and those belonging to ethnic minorities, have access to and complete free and compulsory primary education of good quality. -Eliminating gender disparities in primary and secondary education by 2005 and achieving gender equality in education by 2015, with a focus on ensuring girls’ full and equal access to and achievement in basic education of good quality.

Problems and Issues in Education: Education for All: Equality of rights between men and women, especially as it applies to access to education, has contributed to the development of concept of the right to education for all. As a result, the education sector’s greater openness to girls has made it possible to re-examine the issue of social justice and promote egalitarian gender relation. Thus, girls and women must be given priority in the field of education

1960	Convention against Discrimination in Education (Paris)
1979	United Nations Convention on the Elimination of All Forms of Discrimination against Women (United Nations, New York)
1990	World Declaration on Education for All (Jomtien, Thailand)
1995	Declaration and Platform for Action, Fourth World Conference on Women (Beijing, China)
2000	Dakar Framework for Action, “Education for All: Meeting Our collective Commitments”, World Education Forum (Dakar, Senegal)
2000	United Nations Millennium Declaration (United Nations, New York)
2005	Plan for Action of the World Program for Human Rights Education (United Nations, New York)

Millennium Declaration, United Nations 2000: Goal 1: Ensure Primary Education for All. **Goal 2:** Promote gender equality and empowerment for women

Promoting Gender Equality 1: The elimination of stereotype and the most blatant sexism is insufficient. -All character’s form part of the gender system presented in a textbook, but the system is not present in the same way throughout the textbook. -All gendered representations of male and female must therefore be monitored accordingly, taking into account.

Promoting Gender Equality 2: In addition, the connection between the text and illustrations must be analysed carefully. -Text and illustrations must be redundant or conflicting, they may reinforce or, conversely, weaken each other’s messages.

How should character be gendered?: In texts: A character’s sex is indicted by the grammatical gender of the pronoun, proper noun or common noun. therefore, language (grammar and vocabulary) plays a vital role here. A pronoun: he/she, -A first name: male/female, -A surname, -A family relationship, -Another relationship: friend, neighbour, colleague

Purity must be ensured: Between men, women, girls, boys in both text and illustrations. -In all the different part of the textbooks, such as, the lessons, passages of text and exercises. -In presenting and referring to well-known figures in the fields of politics, science, literature, sport, the arts and economics.

Environmental Education - 1: Tbilisi Conference, USSR, 1977: To create environmental awareness. -To disseminate knowledge and skills. -To initiate new behavioural approaches, at the individual or group levels, towards environment. -To help in promotion of environmentally sound development-program towards sustainable growth.

Environmental Education – 2: Educational Objectives: **Firstly**, by bringing about positive attitudinal and behavioral changes in teachers and students, in respect of environmental problems and conservation. **Secondly**, by creating awareness about past, current and expected situations of environmental considerations in pursuit of sustainable environment. **Thirdly**, by disseminating information and exchanging knowledge and experience gained in achieving the goals of sustainable development. **Fourthly**, encouraging and developing critical thinking among students in dealing with real-world environmental challenges, in general, and those of local origin in particular.

Environmental Education – 3: Mainstreaming Human Rights: -Right to fresh air. -Right to safe drinking water and sanitation. -Right to food, education, shelter and security. -Enforcement of environmental law and institutional development. -Positive attitudinal and behavioural change towards environment

Environmental Education – 4: Mega Issues: -Greening Pakistan: increase forestry, wildlife, creation of lungs of cities (pockets of plantation in big cities by recycled water). -Strategic Pakistan: address long term mega issues; priority setting in local, national, regional, international context. -Mega issues of Pakistan: water conservation, surging population, minimizing climate change impact (glacier melting)

Linguistic Inequalities- 1: The Urdu-English Medium (Divide in Pakistan)

1. The National Language of Pakistan is Urdu and arrangements shall be made for its being used for official and other purposes within fifteen years from the commencing day.
2. Urdu- National Language and lingua Franca (MT for only 7%)
3. Regional languages – used mainly in informal social interactions.

Linguistic Inequalities- 2: English – Official language and gatekeeper for entry into prestigious higher education institutions, high salaried jobs; also, the language of military and bureaucracy.

Linguistic Inequalities- 3: ‘Truism in Pakistan’: English is necessary for individual and national development. -English is a passport to success and upward social mobility. -English is the key to national progress

Educational context in Pakistan School Level: Urdu-medium schools (mainly state operated), English-medium schools (mainly private)

Elitist, Non-elitist (so-called English-medium), Madrasas (Mainly Arabic), Two tracks within English-medium, O/A level, Matric/Intermediate.

Inclusive education: Students cannot learn general curriculum unless they are in the room where it is being taught. **Physical therapy, Curriculum adaptation, Communication board, Behaviour plan, Environmental accommodation**

Accommodation or Modification: Accommodations are used when the student is expected to learn the same curricular content. But the student may be taught in a different way or need changes in the environment. **Modifications** are used when the student is expected to learn less or different curricular content. This could require the modification of assignments, tests, worksheets and other materials in classroom.

What are accommodations: are changes in teaching methods. -When you teach, who teaches, how you teach, How the student can respond, Materials you use Accommodation translation

Room Accommodations: Stand instead of sitting, or sitting instead of standing. -Picture schedules, visual cues or visual timer. -Colour coding. -Visual organization of the room and supplies

Teacher accommodators: Do not wear cologne. -Do not wear a lot of jewellery. -Count to 10 before letting anyone answer questions (processing time).

Teacher Accommodations: Vary teaching methods. -Divide the class. -Set up lessons. -Change the learning goals. -Create alternative activities

Is Pull out Best? “Pull out” means removing the student from class for a small group of 1-to-1 instruction Ask: -Why cannot the skill be taught in the general classroom? Are there ways to change it so it could be taught there?

Accommodations Work!

Before	After
- Refused to do work - Behaviour outburst. -Yelled and hit other kids - No friends. -Refused many class activities	- Done class work; learned difficult terms like life span - Almost no behaviour problems - Loads of friends. -Participates in all class activities

Disability leads to poverty in the following ways: Loss of income. -Additional cost of disability management. -Low expectations in terms of capacity to learn. -Lack of technical and financial support

Poverty Leads to Disability: Poor nutrition and poor body defence against disease. -Poor health due unaffordable healthcare cost. -Lack of access to basic services that prevent disability. -Unemployment, under-employment and low wage rate

At provincial level, the **movement of inclusive education** seems losing its momentum because of two barriers: Attitudes of ordinary school teachers, Attitudes of special education teachers

Attitudes of ordinary school teachers: **Firstly**, they feel that they are not fully competent and supported for this major shift and it will be difficult to create a welcoming environment for children with special needs even if they are really willing to do it. **Secondly**, the public school is already under furious criticism for its extremely low educational standards. The inclusion of special children will further deteriorate the quality of instruction and the school may collapse.

Attitudes of Special Education Teachers: They argue that special needs children require a type of “clinical care” that will never be possible in a free and least restricted environment of public school. -They fear that in case the inclusive education is successfully implemented in Pakistan, they will be out of jobs.

Challenges in Education System - 1: Challenge No 1 - Low level of literacy, **Challenge no 2** - Access to basic education

Some major factors for low enrolment are: Poverty, Long distance from school, Poor physical infrastructure, Functional problems.

Challenges in Education System - 2: Challenge no 3: Schools’ curriculum is static, inert and non-responsive to the socio-economic needs both nationally and internally:

Challenges in Education System - 3: Challenge no 4: To evolve an integrated system of national education by bringing Deni madras and modern schools closer to mainstream especially in curriculum and the scheme of studies. **Challenge no 5** - Financial constrains

Challenges in Education System - 4: Challenges no 6 - Public private partnership. **Challenge no 7** - Rampant un-employment among the educated youth

Challenges in Education System - 5: Revamping of science education by improving science laboratories provision of science equipment. **Challenge no 8:** Need for strong management information system (MIS). **Challenge no 9:** Promote gender equality and women empowerment

Challenges in Education System – 6: Challenge no 10: Quality Assurance. Challenge no 11: to develop monitoring and evaluation mechanism
