Marks: 2 (Budgeted Time 4 Min)
State two problems that can come up as a result of Inconsistent Database?
Answer (Please click here to Add Answer)
100%
Normal
Arial
12
Data inconsistency leads to a number of problems, including
loss of information and incorrect results.
As a result of the data inconsistency, these files duplicate some data such as addresses and names, compromising data integrity.

Discuss the purpose of SELECT clause in SQL query.
Answer (Please click here to Add Answer)
100%
Normal
Arial
12
The SELECT clause specifies the table columns that are retrieved.
The SQL SELECT clause returns a result set of records from one or more tables. A SELECT clause retrieves zero or more rows from one or more database tables or database views. In most applications, SELECT is the most commonly used data query language (DQL) command

How a VIEW can be used for security purpose?
Answer (Please click here to Add Answer)
100%
Normal
Arial
12
Views can be used as security mechanisms by allowing users to access data through the view, without granting the users permissions to directly access the underlying base tables of the view.
Views are used for security purposes because they provide encapsulation of the name of the table. Data is in the virtual table, not stored permanently. Views displayonly selected data. We can also use Sql Join s in the Select statement in deriving the data for the view.

Give an Example of Dead Lock.
Answer (Please click here to Add Answer)
100%
In concurrent computing, a deadlock is a state in which each member of a group is waiting for another member, including itself, to take action
Example:-
Transaction T1 gets an exclusive lock on object A, T2 gets an exclusive lock on B, T1 requests an exclusive lock on B and is queued, and T2 requests an exclusive lock on A and is queued. Now, T1 is waiting for T2 to release its lock and T2 is waiting for T1 to release its lock! Such a cycle of transactions waiting for locks to be released is called a deadlock.
