

ENG 529 MIDS SOLVED

3 MARKS QUESTIONS

1. What technology tool do for you use for language learning? 3marks

ANS: Some widely used technology tools for language learning include:

Language Learning Apps: Duolingo, Babbel, and Rosetta Stone are popular language learning apps that offer interactive lessons, vocabulary practice, and gamified experiences.

Online Language Courses

Language Exchange Platforms

Flashcard Apps

Online Language Tutors

Podcasts and Audiobooks

2. Write two ways of learning language where teachers and learners can communicate in real communication? Just name them 3marks

ANS: Synchronous and Asynchronous

3. Write Three kinds of classrooms that teachers stand in front of learners and give lecture using blackboard or whiteboard? 3marks

ANS: In **traditional classrooms**, teachers stand in front of learners and give lecture, explanation, and instruction through using blackboard or whiteboard. These methods must be changed concerning the development of technology. The usage of multimedia texts in classroom assists learners in become familiar with vocabulary and language structures.

- i. Traditional Lecture Classroom**
- ii. Interactive Whiteboard Classroom**

iii. Flipped Classroom with Whiteboard Sessions

4. Write the **THREE** names of Web-based course management system that use in higher education? OR Name of Tools helping in higher education? Any 3 (3marks)

ANS: Many language instructors in **higher education** are likely to be using a web-based course management system, usually called a **learning management system (LMS)** or **virtual learning environment (VLE)**. These are server-based software tools that are quite useful for course management, including grade recording, assignment distribution and submission, and document archiving.

5. How technology revolutionized the teaching method. Enlist three arguments (From current paper)

ANS: Technology has significantly revolutionized the teaching method, bringing about transformative changes in education. Here are three key arguments highlighting the impact of technology on teaching:

- **Technology enables personalized learning, catering to individual student needs and preferences.**
- **Online resources and multimedia tools enhance accessibility and engagement in the learning process.**
- **Collaborative platforms facilitate global connectivity, fostering interactive and diverse educational experiences.**

In summary, technology has revolutionized education by expanding access to information, creating interactive and engaging learning experiences, and facilitating personalized and adaptive instruction. These changes contribute to a more dynamic, inclusive, and effective educational environment.

6. Three examples that how technology has changed the classroom atmosphere (From current paper) 3MARKS

ANS: Using technology in classrooms shifts the focus from teachers to learners, making learning more engaging and active. With computers, students take charge of their learning, engaging in meaningful tasks, fostering responsibility, and

developing self-direction. Technology creates a true learning experience, promoting autonomy and responsible behavior in students. **OR**

In the past, classrooms relied on textbooks and chalkboards; now, technology offers interactive platforms for digital engagement, fostering collaboration and immediate feedback. Virtual Reality and Augmented Reality break the confines of traditional learning, allowing students to explore immersive environments. Online collaboration tools have replaced in-person discussions, enabling remote teamwork through platforms like Google Workspace and Microsoft Teams, promoting seamless communication and document sharing.

7. Three Websites for ESL?3MARKS

ANS: These are some useful sites for learning the English language for ESL learners:

- I. British Council Teaching English**
- II. Onestop English**
- III. Zozanga.com**
- IV. Manythings.org**
- V. Academia.edu**
- VI. Elt-resourceful**

5 MARKS QUESTIONS

1. Write five names of technology used for academic purpose?

ANS: Here is the technology tools and their academic purposes:

Youtube	web resource (videos)
Zoom	video meeting platform
Google Search	search engine
PowerPoint	office tool / suite
Word	office tool / suite
Axonify	learning platform/LMS

2. Write five other similar terms of CALL associated with technology use in language learning?5marks

ANS: Many other similar terms associated with technology use in language learning, for example, **TELL** (technology-enhanced language learning), **WELL** (web-enhanced language learning), **CELL** (computer-enhanced language learning), **NBLT** (network-based language teaching), and **CMC** (computer-mediated communication).

3. Write two features of JavaScript?5 marks

ANS:

Versatility and Flexibility:

JavaScript (officially ECMAScript) is a scripting language that is incorporated into the source of the webpage, along with HTML and CSS (cascading style sheets).

Client-Side Scripting:

JavaScript is client-side code and is natively supported by Web browsers, which means that it runs efficiently and can be integrated into the Web page structure.

4. Five tool/gadgets that modernize the teaching methods?5marks

ANS:

Interactive Whiteboards

Tablets and Smart Devices

Learning Management Systems (LMS)

Virtual Reality (VR) and Augmented Reality (AR)

Online Collaboration Platforms

5. Five advantages of Internet in education?

ANS:

The Internet is helping millions of English learners by bringing language learning to them, eliminating the need for a specific location. In schools and colleges, teachers face a generation that grew up surrounded by technology, changing how they learn.

The Internet has revolutionized education, offering numerous advantages. Firstly, it provides unparalleled access to vast information, enabling students to conduct research and broaden their knowledge. Secondly, online learning platforms facilitate flexible and remote education, catering to diverse

schedules and geographical locations. The Internet also fosters collaboration through forums and virtual classrooms, promoting interactive learning experiences. Additionally, it allows for instant communication between students and educators, enhancing the support system. Lastly, the Internet is a rich source of multimedia resources, including videos and interactive simulations, making learning more engaging and accessible.

6. Five benefits of technology in learning/teaching?

ANS:

Teachers often observe increased motivation and engagement among learners when incorporating technology, a crucial factor in enhancing the learning experience. Technological tools empower students to transcend traditional classroom boundaries, fostering a sense of ownership over their education. Active involvement with technology outside the classroom further reinforces this ownership.

Technology can be a highly engaging and interactive tool, providing a source of real language, both written and spoken, in the classroom, and motivating learners to produce more language than they otherwise might have done. More senses are involved in technology, so learning becomes durable and most penetrating into the slate of the brain.

7. Write Arguments about saying "Technology-embedded Classroom Develops Learners' Autonomy"? 3marks for content and 2 marks for Argument.

ANS: Dawson, Cavanaugh, and Ritzhaupt (2008) and Pourhosein Gilakjani (2014) maintained that using technology can create a learning atmosphere centered around the learner rather than the teacher that in turn creates positive changes. They emphasized that by using computer technology, language class becomes an active place full of meaningful tasks where the learners are responsible for their learning. Drayton, Falk, Stroud, Hobbs, and Hammerman (2010) argued that using computer technology indicates a true learning experience that enhances learners' responsibilities. Technology encourages learners to learn individually and to acquire responsible behaviors. The independent use of technologies gives learners self-direction.

OR (AI CONTENT)

Content (3 Marks):

1. Personalized Learning Paths:

Technology in the classroom allows learners to progress at their own pace. Adaptive learning software, educational apps, and online resources enable students to tailor their learning paths based on individual needs and learning styles. This personalized approach fosters autonomy as students take control of their learning journey.

2. Access to Diverse Learning Resources:

Technology provides students with access to a vast array of learning resources beyond traditional textbooks. Online databases, interactive simulations, and multimedia content offer diverse perspectives and varied formats of information. This exposure encourages learners to explore topics independently, contributing to the development of critical thinking and autonomy.

3. Active Participation through Digital Tools:

Technology encourages active engagement in the learning process. Interactive whiteboards, collaborative platforms, and educational software promote hands-on participation, where students can create, explore, and share their work. This active involvement fosters a sense of ownership and autonomy as students become drivers of their own educational experiences.

Argument:

The integration of technology in the classroom shifts the role of the learner from a passive recipient of information to an active participant in the learning process. Digital tools empower students to explore, interact, and make decisions about their learning, cultivating a sense of autonomy. The ability to navigate and leverage technology for educational purposes equips learners with essential skills for the modern world, emphasizing the importance of technology in developing students' autonomy and self-directed learning capabilities.

8. key Aspect of CMC?5marks

ANS:

Computer-Mediated Communication (CMC) refers to communication that takes place with the assistance of computers and networks. One key aspect of CMC is its asynchronous and synchronous nature, providing flexibility in communication modes:

Asynchronous Communication:

Definition: Asynchronous communication occurs when there is a time delay between the sender's message and the receiver's response.

Characteristics: Email, discussion forums, and message boards are examples of asynchronous CMC. Participants do not need to be online simultaneously, allowing for flexibility in response times. This mode is particularly beneficial for participants in different time zones or those with varying schedules.

Synchronous Communication:

Definition: Synchronous communication involves real-time interaction, where participants engage in communication simultaneously.

Characteristics: Chat, video conferencing, and instant messaging exemplify synchronous CMC. Participants must be online at the same time to engage in real-time conversations. This mode facilitates immediate feedback, fostering more spontaneous and dynamic interactions.

Understanding and effectively utilizing both asynchronous and synchronous communication aspects are crucial for individuals engaging in CMC, as it allows them to adapt their communication style based on the context and preferences of the participants involved.
