

ENG507

Quiz for Final-Term

ABSTRACT

This comprehensive collection of notes is accurately crafted to empower students to excel academically, ensuring they achieve a minimum of 80% marks in their examinations. The content is organized with clarity and precision, focusing on key concepts, critical analyses, and practical applications tailored to the syllabus. These notes serve as a reliable resource for both thorough preparation and last-minute revision. Designed to inspire confidence and mastery, this guide is an essential tool for students striving for academic excellence.

Maha Malik

Phonetics and Phonology

ENG507_Phonetics and Phonology
Quiz for Final-Term

1. The shape of the lips: spread as in /i:/ vowel.
2. sonorant's are sonorant's because they are **formants**
3. Which one is the most important feature for tonal languages? (**PITCH**)
4. Waveform of nasals is _____ to waveform of vowels. **DIFFERENCE (distinctive)**
5. sonorants are different from vowels because they have _____ amplitude (**lower**)
6. confirming the pitch of spectral slice one should ignore _____ at beginning (**small spikes**)
7. Difference between F2 and F1 is related to _____ of vowels. (**Backness**)
8. **Assimilation** is particularly studied in phonetic of Individual
9. Which language have fixed phrase stress **Japanese**
10. In Japanese all morae have approximately same **duration**
11. Which language has no nasal vowels _____? **Siraiki**
12. Nasalization is common feature of Indo **Aryan languages**
13. format structure of approximants is match with **vowels**
14. **IPA** is the set of symbols and diacritics that have been officially approved by IPA.
15. Nasalization diacritic is called **tilde**
16. I and owe the cluster of . **V**
17. Cardinal vowels produced by . **Daniel Jones**
18. **ELT** stands for (**English Language Teaching**)
19. More than 3 syllables are called (**trisyllabic**)
20. Which of the following sounds is represented by the symbol [t̚] (there is a diacritic mark under [t] which I am unable to type?? **DENTAL STOP**
21. Which of the following symbol represents voiced alveolar tap. **r**
22. In source- filter theory, filter represents **CAVITY**.
23. The formants that characterize different vowels are the result of the different shapes of the **VOCAL TRACT**.
24. One should watch for the burst and aspiration in the **STOP SOUNDS**.
25. Which of the following vowel sounds (in the given words) will be uttered with neutral lips?
SET
26. Frontness or backness of a vowel is determined by the position of **TONGUE**
27. R- coloring is also termed as **rhotacization**.
28. Spanish has a very simple system contrasting only **FIVE** vowel sounds.
29. In English, sounds /w/ and /j/ are considered **SEMI VOWELS**
30. Which of the following symbols represents labialization as a secondary gesture? [ʷ]
31. The last part of the syllable is called **CODA**
32. The study of the sequences of phonemes is called **PHONOTACTICS**
33. In syllable timed languages, all syllables tend to have a/an **EQUAL** time value.
34. In tonal languages, which of the following is an essential component of the pronunciation of a word? **PITCH**

ENG507_Phonetics and Phonology
Quiz for Final-Term

35. In Mandarin, the word [ma] means “mother” when it is said with **HIGH PITCH**
36. The study of intonation is sometimes called **INTONOLOGY**
37. Which of the following types of phonetics is considered for specific purposes only?
INDIVIDUAL PHONETICS
38. Two native speakers of a language will always speak **WITH SOME VARIATION**
39. The features [voiceless] and [breathy voice] are studied under the cover term ‘Laryngeal
40. ‘Radical’ is a cover for [pharyngeal] and [epiglottal] articulations made with the **ROOT OF THE TONGUE** of the tongue.
41. In the production of a plosive like [p], which of the following is not a sub-task? **CLOSE THE TEETH**
42. Speech is quite diverse and complex particularly when it comes to the phonetics of **INDIVIDUAL**
43. Phonotactically speaking, which of the following sequences of phonemes will be acceptable in English. **/bleidg/**
44. Which of the following words uses a seven phoneme pattern of syllable? **STRENGTHS**
45. PRAAT software is particularly useful for the **ACOUSTIC** analysis.
46. The measurements are taken from the middle of a vowel sound because it is the **NUCLEUS** portion.
47. F1 is inversely related to the **HEIGHT** of the vowel.
48. The difference between F2 and F1 is related to the **FRONTNESS** of the vowel.
49. Sonorant is **VOWEL** like sounds.
50. **Sonorant** is the sounds that basically consist of nasals and glides
51. Which of the following features (place of articulation) best describes the stop /p/?
(BILABIAL)
52. Which of the following features (place of articulation) best describes the stop /g/.
(GLOTTAL)
53. The question that is mainly answered by the contrastive function of distinctive feature theory is ‘how “**is it different**”?’
54. Which of the following functions of the distinctive feature theory answers the question, ‘What is it?’ **(DESCRIPTIVE)**
55. Which of the following is considered a GOLDEN method of SLA? **(Task Based Learning and Teaching (TBLT))**
56. The activities of **ELTR** are planned and sponsored by British Council Pakistan
57. English Language Teaching Reforms (ELTR) are the projects of the ____ of Pakistan. **(Higher Education Commission (HEC))**
58. In spectrograms, time runs from left to right, and the frequency of the components is shown on the _____ scale. **(vertical)**
59. Acoustics is the study of the physics of the _____. **(speech signal)**

ENG507_Phonetics and Phonology
Quiz for Final-Term

60. One should observe gap in pattern with burst for _____ and sharp formant beginning for voiced stops. **(voiceless)**
61. Which of the following vowel is uttered by rounding lips? **(/u/)**
62. The glottis (which is defined as the space between the _____). **(vocal folds)**
63. For this sound (i.e., [p]), in order to produce a lip closure movement, ____ main muscles. **(two)**
64. Consonant appears in a sequence in a syllable, is known as consonant _____. **(cluster)**
65. Sonorants are vowel-like sounds that basically consist of nasals and **(glides)**
66. Which place of articulation best describes the stop /d/? **(Alveolar)**
67. Which place of articulation best describes the stop /p/? **(Bilabial)**
68. 7. Which is a good example of consonant cluster? **(Strength)**
69. ELT action researches are mostly conducted by _____. **(teachers)**
70. TESOL stands for _____ **(Teaching English to Speakers of Other Languages)**
71. Which is a tonal language? **(Mandarin)**
72. Each word is stored in memory and their phonetic variability is memorized rather than computed is described by **(speech memory theory)**
73. Which word is uttered through rounded lips? **(Put)**
74. British English has ---- vowels? **(20)**
75. Japanese has a set of _____ vowels. **(five)**
76. In syllables the combination of nucleus (peak) and coda is called the _____. **(rhyme)**
77. Laryngealized (creaky) sound /b/ exists in _____. **(Hausa)**
78. In phonetics and phonology, speech sounds (segments), using basic units of contrast, are defined as gestures. **(True)**
79. Gestures are treated as the abstract characterizations of articulatory events with an _____ time dimension. **(intrinsic)**
80. Many languages (including English) have the labiodental fricatives [f, v]. **(False)**
81. Ejective affricate /ts'/ is found in _____. **(Navajo)**
82. A large number of non-English sounds are to be found in other languages (such as Iranian and African languages). **(True)**
83. An articulatory target refers to the _____ target position of the articulators for the production of a specific speech sound. **(hypothetical)**
84. Dental sounds are present only in the American English. **(False)**
85. In English and most of other languages nasals are voiced. **(True)**
86. As voiceless nasals are comparatively rare, they are symbolized simply by adding the voiceless diacritic [̥] above the symbol for the voiced sound. **(False)**
87. The fricatives [s, z, ʒ, ʃ] are called _____ sounds. **(sibilant)**
88. A better way of dividing fricatives is to separate them into groups on a purely _____ basis. **(auditory)**
89. It is a usual /r/ approximant or unusual rhotic approximate [ɹ] found in _____ English. **(American)**

ENG507_Phonetics and Phonology
Quiz for Final-Term

90. In all forms of English, the air flows freely without audible friction, making this sound a _____ alveolar lateral approximant. **(voiced)**
91. Laterals are usually presumed to be _____ approximants unless a specific statement to the contrary is made. **(voiced)**
92. A 'laryngeal gesture' would specify all supraglottal characteristics. **(False)**
93. In the sections on various stop sounds in world languages, we studied _____ types of stop sounds. **(13)**
94. An 'oral gesture' would specify characteristics of phonation. **(False)**
95. Speech segments are modeled as sets of gestures that have their own _____ temporal structure allowing them to overlap one way or the other. **(intrinsic)**
96. Acoustic phonetics is the study of the _____ properties of speech, and aims to analyze sound wave signals. **(physical)**
97. Acoustic analysis describes the durational characteristics, articulatory properties and _____ differences through physiological measurement. **(phonetic)**
98. In acoustics, it is possible to measure and analyze vibrations (physical properties) by mathematical techniques. **(True)**
99. Source-filter theory is an important concept in auditory phonetics. **(False)**
100. Acoustics is mainly devoted to the principles of physics involving the latest technology such as computer software _____. **(Praat)**
101. Sound travels from a noise-making source (i.e., the vocal fold vibration) to the _____. **(lips)**
102. Acoustic analysis not only gives us the features of a sound but also tells us about the duration or length of a speech sound. **(True)**
103. The experts of phonetics are particularly interested in analyzing _____ acoustically. **(vowels)**
104. Acoustic Analysis of Vowels describes vowels in terms of numbers (in a language that how many vowels are possible). **(True)**
105. In source-filter theory, the vocal folds (at _____) are then a source of sound energy. **(larynx)**
106. According to Source-filter theory, source refers to the _____ of the vibrating larynx. **(waveform)**
107. Acoustic phonetics particularly involves electronics and some grounding in physics. **(True)**
108. The air in the vocal tract is set in vibration by the action of the vocal folds. **(True)**
109. All voiced sounds are distinguishable from one another by their formant structure (frequencies). **(True)**
110. Using computer programs, we can analyze vowel sounds by showing their components through the display (spectrogram). **(True)**
111. The resonance frequency of the particular resonance mode _____ when a constriction is located at a node of that resonance mode. (decreases) **(increases in system)**

ENG507_Phonetics and Phonology
Quiz for Final-Term

112. In spectrograms: the frequency of the components is shown on the _____ scale. **(vertical)**
113. The resonance frequencies change in a predictable way when the tube is _____ at various locations. **(squeezed)**
114. The vocal tract as a tube with a uniform diameter has simultaneous resonance frequencies—several different pitches at the same time. **(True)**
115. The resonance frequency of the particular resonance mode _____ when a constriction is located at a node of that resonance mode. **(squeezed)**
116. The air in the vocal tract is set in vibration by the action of the vocal folds. **(True)**
117. The resonance in the vocal tract (filter) is _____ the rate of vibration of the vocal folds (source). **(independent of)**
118. According to perturbation theory, _____ occurs in a uniform tube where one end is closed and the other end is open. **(resonance)**
119. The rhythm of the sentence is apparent because the overtone pitches occur only when the _____ folds would have been vibrating. **(vocal)**
120. The acoustic properties (structure) of consonantal sounds are usually more _____ than that of vowels. **(complicated)**
121. According to _____, a vowel is merely the rapid repetition of its peculiar note. **(Hermann Helmholtz)**
122. “Vertical striations corresponding to the vibrations of the vocal folds” is a spectrographic hint for _____ sound. **(voiced)**
123. Spectrograms are the part of techniques used in machine translation. **(True)**
124. While interpreting consonants, carefully see the overall structure, especially the frequency scale. **(True)**
125. While interpreting consonants, analyze the behavior of the adjacent vowels. **(True)**
126. A complete range of a speaker’s vowel qualities may be considered as representative of his personal features which may be compared with the formant frequency of each vowel. **(True)**
127. Words recorded in isolation are _____ to be interpreted through spectrogram. **(easy)**
128. When two different speakers record their sets of vowels with the same phonetic quality, their relative positions on a formant chart will be _____. **(similar)**
129. “Random noise pattern in higher frequency regions” is a spectrographic hint for _____ sound. **(fricative)**
130. Experts of applied phonetics and computer speech technology are not trying to understand the complexity of speech – synthesis systems and improve it. **(False)**
131. Spectrograms show relative quality (e.g., a particular speaker may have a higher level of vowels). **(True)**
132. The Californians have a higher vowel (lower first formant) in [eɪ] than in [ɪ]. **(True)**
133. The Californian English does maintain a contrast between the vowels in ‘cot’ and ‘caught’ (they are both spoken as the same [ɑ]). **(False)**
134. The vowels of BBC accent are different in both number and quality. **(True)**

ENG507_Phonetics and Phonology

Quiz for Final-Term

135. Japanese has a set of _____ vowels but very different in a narrower transcription than that of Spanish. **(five)**
136. Urdu has _____ nasal vowels. **(seven)**
137. ATR is used phonologically in _____ as a factor in contrast of vowel harmony. **(Advanced Tongue Root)**
138. In the description of consonantal quality, rhotacization is a term which is used in English phonology referring to dialects or accents. **(False)**
139. RP stands for _____. **(Received Pronunciation)**
140. British English speakers distinguish the vowel [ʌ] in 'cut' from the vowel [ɜ] in 'curt'. **(True)**
141. ATR is used phonologically in _____ as a factor in contrast of vowel harmony. **(Akan)**
142. Most of the world languages contain a class of sounds that functions in a way similar to consonants but is phonetically similar to vowels. **(True)**
143. In French there are _____ semivowels. **(three)**
144. The addition of a high front tongue gesture (as in sound like [i]) to another main (primary) gesture is known as _____. **(Palatalization)**
145. A sound may or may not have any of the four secondary articulations such as palatalization, velarization, pharyngealization and _____. **(labialization)**
146. A sound may or may not have any of the four secondary articulations such palatalization, velarization, pharyngealization and labialization. **(True)**
147. The superimposition of narrowing of the pharynx is called _____. **(Pharyngealization)**
148. RTR Stands for _____. **(Retracted Tongue Root)**
149. Which of the following observes a lesser degree of closure but occurs approximately at the same time as another gesture? **(Secondary articulation)**
150. There are two features of vowel quality, i.e., height and _____ of tongue. **(backness)**
151. Pakistani regional languages have a variety of nasal vowels. **(True)**
152. Which of the following is a fundamentally important unit both in the fields of phonetics and phonology? **(Syllable)**
153. From the speech production point of view, a syllable consists of a movement from a constricted or silent state to a vowel-like state and then back to constricted or silent state. **(True)**
154. The end of the syllabus is called _____. **(coda)**
155. Stress is the least important feature both in phonetics and phonology. **(False)**
156. In terms of its linguistic function, stress is often treated under two different headings: word (lexical) stress and _____ (emphatic) stress. **(sentence)**
157. Phonologists are interested in the structure of a syllable and it can be divided into _____ possible parts. **(three)**
158. In terms of its linguistic function, stress is often treated under _____ different headings. **(two)**

ENG507_Phonetics and Phonology
Quiz for Final-Term

159. Supra means _____. (**beyond**)
160. One of the areas in which a little agreement is found is related to the levels of stress. (**True**)
161. Suprasegmental refers to a vocal effect which extends over more than one sound (segment) in an utterance. (**True**)
162. A stressed syllable contains factors such as loudness, rise in pitch, length of duration, and _____. (**vowel quality**)
163. The primary stress is very important in languages like _____ as it has the ability to change meaning. (**English**)
164. 'Stress timed languages' is a very general phrase used in phonetics to characterize the pronunciation of languages. (**True**)
165. The division among the syllables is made on the basis of stress and unstressed patterns. (**True**)
166. In syllable-timed languages, the syllables are said to occur at regular intervals of time and this characteristic is sometimes referred to as _____. (**isosyllabism**)
167. As a concept, syllable-timed is similar to stress-timed. (**False**)
168. There are some speech sounds that are voiceless (e.g. /s/), and cannot give rise to a _____ of pitch in this way but the voiced sounds can. (**sensation**)
169. Languages of the world divided into two broad categories: stress timed language and tone timed languages. (**False**)
170. The pitch sensation that we receive from a voiced sound corresponds not very closely to the frequency of vibration of the vocal folds. (**False**)
171. Syllables tend to occur at regular intervals of time with _____ word stress. (**fixed**)
172. It is sometimes claimed by the experts that different languages (and dialects) have different types of _____ patterns. (**rhythmic**)
173. In syllable timed languages, all syllables tend to have an _____ time value the rhythm of the language is said to be syllable-timed. (**equal**)
174. In tone (tonal) languages, the linguistic function of tone is to change the _____ of a word. (**meaning**)
175. In simple sense, 'intonation' refers to the variations in the pitch of a speaker's voice used to convey or alter meaning. (**True**)
176. The study of intonation is sometimes called ontonology. (**False**)
177. One reason for intonation not being well explored is because of the different _____ frameworks. (**descriptive**)
178. It is claimed that _____ languages also have intonation and that it is superimposed upon the tones themselves. (**tone**)
179. The most important function of intonation is to act as a signal of grammatical structure, where it performs a role similar to punctuation (in written language). (**True**)
180. Tone as a suprasegmental feature refers to an identifiable movement or level of formants that are used in a linguistically contrastive way. (**False**)

ENG507_Phonetics and Phonology

Quiz for Final-Term

181. The role of intonation in the communication is quite important as it also conveys personal attitude (e.g., sarcasm, puzzlement, anger, etc.). **(True)**
182. Linguistic phonetics is an approach which is embodied in the principles of the International Phonetic Association (IPA). **(True)**
183. Linguistic phonetic descriptions (of speech sounds) are, by and large, descriptions of the phonetics of the community. **(True)**
184. The phonetics of the individual is the focus of much of the explanatory power of phonetic theory. **(True)**
185. The description of the phonetics of the individual involves describing the phonetic knowledge and skills related to the performance of language. **(True)**
186. IPA is the set of letters and indicators that have been officially approved by IPA. **(False)**
187. The shaded cells, exhibit the sounds not discovered at these places yet. **(False)**
188. The focus of linguistic phonetic description is the phonetics of the _____. **(community)**
189. Linguistic phonetics answers a number of questions related to the possible ways of _____ unified phonetics and phonology. **(articulatory)**
190. The full form of the acronym IPA is _____. **(International Phonetic Association)**
191. Which of the following indicates the combinations of categories that are humanly possible but have not been observed so far? **(Blank cells on the IPA chart)**
192. Which of the following is a term for pharyngeal and epiglottal articulations that are made with the root of the tongue? **(Radical)**
193. The 'Laryngeal' possibilities involve mainly _____ features. **(five)**
194. The linguistic phonetic explanation does always satisfy all the topics of speech production. **(False)**
195. In 'assimilation' the detached sounds come to share some phonetic properties. **(False)**
196. The phonetics of the individual gives explanation to a number of complex issues related to linguistic explanation. **(True)**
197. Feature hierarchy is an important concept in phonetics and phonology which is based on the properties and features of sounds. **(True)**
198. In which of the following there is a tendency in pronunciation for adjacent sounds to share phonetic properties (at individual level)? **(Assimilation)**
199. Sounds are divided in terms of their supra-laryngeal and laryngeal characteristics, and their _____ mechanism. **(airstream)**
200. The feature 'Rhotic' has only _____ possible value/s. **(one)**
201. Speech is not very diverse and complex particularly when it comes to the phonetics of individual. **(False)**
202. It is understandable that different speakers of the same language will have somewhat same productions of speech. **(False)**
203. No one's style is basic (from which others are derived), because all are stored in _____. **(memory)**

ENG507_Phonetics and Phonology

Quiz for Final-Term

204. Exemplar theory says that generalization is also possible within _____. (**productivity**)
205. Name the phenomenon that caused change at the place of the nasal and the following stop in words 'improper' and 'impossible'? (**Palatalization**)
206. Perceptual separation affects the set of sounds that potentially can occur at a given position in a word. (**True**)
207. The principle of perceptual separation usually results into one sound affecting an adjacent sound. (**False**)
208. Articulatory movements are contracted with varying degrees of tension in specific sequence and duration of _____. (**contraction**)
209. Articulation with the least possible effort enables us to speak with balance between phonetic forces leading to changes in the pronunciation of sounds. (**True**)
210. Focusing on the phonetics of the individual we can explore the controlling of the _____ movement. (**articulatory**)
211. Syllable is the unit of pronunciation typically larger than a single sound and smaller than a word. (**True**)
212. Which of the following refers to the division of a word into syllables is called? (**Syllabification**)
213. Languages differ from each other as the syllabic patterns are different across languages and language families. (**True**)
214. It has often been found that languages do not allow all phonemes to appear in any order. (**True**)
215. Phonotactics is a term used in phonology to refer to the order of segments which occur in a language. (**True**)
216. The allowed sound patterns and restricted sound patterns of language are found through phonotactics. (**True**)
217. The study of the phonemes and their order found in the syllables (the study of sound sequences) of a language is called the _____. (**phonotactics**)
218. Consonant sequences are called _____. (**clusters**)
219. Praat is a computer program with which you can analyze, synthesize, and manipulate _____. (**speech**)
220. Praat is used for speech analysis related to _____. (**acoustics**)
221. Which of the following is particularly helpful in acoustic analysis because it allows to place segmental symbols and annotate the sound file? (**Segmenting and labelling**)
222. On Praat we cannot open the 'textgrid' and 'sound file' together. (**False**)
223. Praat only requires a very modest experience of computer and you can easily conduct experiments if you are using personal computer at a very initial level. (**True**)
224. In order to display a sound file, the first step is to open the sound file in the Edit window. (**True**)
225. Nowadays, most of the research works in phonetics and phonology are based on software like Praat and WaveSurfer. (**True**)

ENG507_Phonetics and Phonology
Quiz for Final-Term

226. Praat is not very important for learning phonetics and phonology in general and acoustic analysis of speech in particular. **(False)**
227. Use the _____ button to analyze and synthesize from the tools panel. **(edit)**
228. Press _____ to paste the Praat image into your Word document. **(Ctrl+V)**
229. Export your visual displays to the _____ document is the part of the 'write up' of the experiment. **(Word)**
230. Source-filter theory is particularly important to understand the basic components of speech sounds and the nature of the acoustic signals. **(True)**
231. Source-filter theory is particularly important to understand the basic components of speech sounds and the nature of the _____ signals. **(acoustic)**
232. It is important to note down that when our vocal folds vibrate, the result is a suspended wave. **(False)**
233. Fundamental frequency (F0 or Pitch) is an important component of _____ theory. **(source-filter)**
234. Harmonics are the _____ integers of the fundamental frequency which are basically the result of vocal fold vibration. **(multiple)**
235. Formants are the _____ resonances. **(overtone)**
236. It is clear now that harmonic numbers are different for one type of sounds but the _____ are the same. **(formants)**
237. Acoustically, in order to plot vowels on chart, _____ are very important. **(F1-F2)**
238. The relationship between the harmonics and the formants is captured in the _____ model of speech production. **(source-filter)**
239. For exploring the acoustics of vowels, we need to record vowels and explore their properties. **(True)**
240. One more way (other than the waveform) to confirm your pitch measurement is by looking at the _____. **(spectral slice)**
241. To plot the pitch of each vowel, make sure you label x-axis using a program that allows you to spread out your measurements as much as you can. **(False)**
242. You can also use Praat's _____ formant tracking to help you if you want. **(automatic)**
243. While plotting vowels on chart, after putting the data in Excel sheet, we will use the _____ chart from the same spreadsheet. **(scatter)**
244. After vowel recording, measure the following three things: intrinsic pitch, _____ make up (formants) and plotting them in excel sheet. **(spectral)**
245. Once plotting is complete, export the chart to your _____ document and give it the number and title accordingly. **(Word)**
246. Remember that we need the default _____ spectrogram for measuring the first and second formants (F1 and F2) of each vowel. **(wide-band)**
247. Sonorants are different from vowels because they generally have _____ amplitude; therefore, they behave like consonants. **(lower)**

ENG507_Phonetics and Phonology
Quiz for Final-Term

248. Glides are also the sonorants (vowel-like) sounds as they have similar patterns (have formants). **(True)**
249. Analyze that how similar is the formant structure of glides with _____ and nasals. **(vowels)**
250. Nasals have very _____ waveforms as they have distinctive forms of anti-formants and formant transition. **(distinctive)**
251. Formants for nasal sounds are also important for _____ analysis. **(acoustic)**
252. Sonorants are vowel-like sounds (nasals and glides). **(True)**
253. There are three important acoustic correlates of voicing in stops: the voice bar, VOT, and the duration of the preceding vowel. **(True)**
254. There are _____ important acoustic correlates of voicing in stops. **(three)**
255. Another aspect of acoustic correlate of stops is the bar which is the characteristic of voiced + voiceless + aspirates stop sounds. **(False)**
256. Another aspect of acoustic correlate of stops is the _____ which is the characteristic of voiced + voiceless + aspirates stop sounds. **(VOT)**
257. Pakistani variety of English can be studied in terms of its deviation from the _____ variety. **(standard)**
258. While working on Pakistani languages, one may apply for funding from 'organization for endangered languages' and _____. **(UNESCO)**
259. Which of the following relates to 'descriptive function'? **(What is it?)**
260. What do you think 'speech synthesis' is about? **(Speech production by machine)**
261. Which of the following may NOT be considered as a major language of Pakistan? **(Comparative function)**
262. In experimental phonetics and phonology, the studies of sounds include various primitive experimental techniques. **(False)**
263. Which Pakistani region is linguistically one of the richest regions of the world? **(Himalaya Hindu Kush)**
264. Pakistani learners' issues of learning English as a _____ language may be studied. **(second)**
265. In the field 'sociolinguistics of English varieties', there are now many well-known data gathering techniques like _____ paradigm. **(variations)**
266. The acronym TESOL stands for _____. **(Teaching English to Speakers of Other Languages)**
267. TBLT stands for _____. **(Task Based Learning and Teaching)**
268. CNN stands for _____. **(Cable News Network)**
269. Classroom research is seldom based on problem (related to teaching, for example) solving. **(False)**
270. Teachers are called _____ of change. **(agents)**
271. Which of the following is the most rewarding and productive research type for teachers to conduct? **(Action)**

ENG507_Phonetics and Phonology
Quiz for Final-Term

272. The phonetics of phonological speech errors, if explored and shared by teachers (by investigating their own practices), may lead to a very negative discussion in the academics.
(False)
273. BBC stands for_____. **(British Broadcasting Corporation)**
