Question No : 23 of 26 Marks: 3 (Budgeted Time 6 Min)

Define following:-

- 1) Synchronous Messages
- 2) Asynchronous messages

Answer (Please [click here](#) to Add Answer)

Asynchronous messages are "signals," denoted by a half arrow. They do not block the caller. Asynchronous messages typically perform the following actions:

- ❖ Create a new thread
- ❖ Create a new object
- Communicate with a thread that is already running

Synchronous Messages:-

Synchronous messages are "call events" and are denoted by the full arrow. They represent nested flow of control which is typically implemented as an operation call. In case of a synchronous message, the caller waits for the called routine to complete its operation before moving forward.
