

Topic 121:

Second Language Acquisition and World Englishes.

Second Language Acquisition:

The study of individuals and groups who are learning a language subsequent to learning their first one as young children, and to the process of learning that language.

Distinctions in second language in SLA:

Distinctions are firstly Second Language and foreign language, Auxiliary language and Additional language.

SLA and World Englishes:

- Growing recognition of the plurality of English underlying the World Englishes (WE) paradigm.
- Problematizing of the conventional SLA views of second language learning.

World Englishes Claims:

According to Kachru, WE makes three basic claims:

- There is repertoire of models for English, not just the native

English.

- Localised innovations in English deserve recognition.

- The ownership of English lies with all those who use it.

Challenge to Traditional SLA paradigm

- Rejects the attainment of native-like competence as the English learning goal for all learners.

- Native speakers not responsible for the standardization of English

SLA and World Englishes:

Global spread of English, socio-cultural and pragmatic needs of new speech communities of English.

Generation of multiple norms at the local, national and regional levels.

SLA and World Englishes:

View of deviations from the standard English:

- In SLA: errors

- I WE: variations

Non-native speaker (NNS) norms treated as equal to native speaker norms. Also NNS norms

for evaluating the appropriateness of English use in outer circle contexts.

Topic: 122:

Second language Acquisitions in Multilingual Context.

SLA and multilingualism

The world Englishes orientation recognizes are learned/acquired in multilingual contexts.

Functions of an additional language

The use and functions of the additional language are determined by the role and status the additional language enjoys in a community. WE performs various functions in different settings.

Benefits of world Englishes to the study of SLA

It provides fertile ground for SLA research. It offers research potential in Applied linguistics and sociolinguistics.

World Englishes and SLA concepts

Lack of relevance b/w World Englishes and SLA concept.

Fossilization, Interlanguage, Input and Monitor.

Focus of world Englishes research

The impact ~~and~~ of uses and functions of a language on its acquisition.

Topic 123:

SLA and formal Instructions

Orthodox view of SLA

Native-like competence as L2

Learning goal, Deviations from NS norms are believed to result from limited linguistic competence.

World Englishes view of SLA

L2 learning goal may not necessarily correspond to NS norms. Deviations from standard English norms may not necessarily be errors in WE particularly when an idiosyncratic form appears systematic and is shared by a speech community.

Language instruction in World Englishes context.

English language instruction is carried out by non-native

English speaking teachers. No exposure to native speakers. No or limited exposure to materials from the inner circle.

Topic: 124:

Issues of Proficiency and Communicative competence in Foreign language instruction in NNS countries:

Native language as the model for a foreign language learning. Native speaker not a requirement as teacher or instructor.

English language instruction in NNS countries:

Preference for native English speaking teachers. NNS teachers not being proficient enough, spoil the language. Which pedagogical model? Which English - US, UK or native?

English language use in NNS countries

There are millions of L2 users who learn and use second language in their own countries, from their own (non-native) teachers. for use

primarily with other normative speakers, and who may never come across a native speaker face to face'. (Sridhar cited in B. Kachru, Y. Kachru & Nelson, 2006)

Ideal definition of a Native speaker

Someone who acquired a given language as her/his home language at mother's knee, without benefit of formal instruction. She/he has useful intuitions about grammatical correctness, and does not have to think about how to say what she/he wants to say.

Proficiency of non-native speakers

Non-native speakers as proficient speakers. Show better proficiency than the native speakers in some cases. Do we need a native speaker or a proficient speaker?

SLA and native speaker

- Primary Criteria: monolingual notion

- Secondary Criteria: Social factor.

Needs to acknowledge outer and expanding circle varieties of English

In SLA

Topic: 125:

Issues of Proficiency and Communication Competence II

Genetic and functional nativeness

Genetic Nativeness:

Refers to the historical relationships of contact and convergence b/w languages.

Functional Nativeness:

Sociolinguistic status in range and depth of use in a society. Users recognize standard English. User's exhibit proficiency comparable to native speaker's proficiency.

Communicative Competence:

The ability to use a community's language in appropriate ways to achieve goals and to operate in the society in an intended manner. Refers to both the tacit knowledge of a language and the ability to use it effectively. The ^{socially} ~~society~~ appropriate use of language. Knowing and acting in accordance with the sociocultural knowledge. Conventions of language use.

Communicative Competence and Native Speaker:

A native speaker does not make for a more competent communicator in different contexts.

C.C and World Englishes:

Wide exposure to varieties of English allows for being flexible in one's uses of the language. Inclusion of the notion of world Englishes in teacher education programmes.

Topic 126:

Nativization & Englishization

Nativization:-

Effective communication in world Englishes context depends on:

An awareness of nativization of English. Englishization of the local language in contact with English.

• Adaptation of English to local socio-cultural environments.

Leads to qualifying descriptors such as:

• US English

• Indian English

• Singaporean English

Englishization:

The transformation which takes place in non-English cultures and languages as a result of exposure to the English language.

Obvious influences of English on other languages. Levels of language from pronunciation to literary genres are affected.

Code mixing and code switching

Code mixing:

Changing from one language to another within sentences.

Code Switching:

Changing from one language to another across sentences and larger language domains.

A major characteristic of the users of world Englishes, readily observable. Not fully approved by monolingual researchers. Need to understand what prompts code mixing and switching.

Topic: 127:

World Englishes and Interlanguage

Interlanguage

Refers to the intermediate states of a learner's language as it moves from L1 toward the target L2.

L1 ——— 1.....1 ——— L2

Interlanguage is metaphorically a halfway house between the first language (L1) and second language (L2).

Learning L2 is a gradual process from L1 towards L2. At every stage of learning learners have rules of grammar which are not perfect yet.

Reflects the learner's evolving system of rules. Is influenced both by L1 and by input from the target language.

The ~~multi~~ monolingual SLA stance considers all non-native varieties of language as failed attempts at learning.

Topic: 128:

World Englishes and Interlanguage II

Interlanguage:

Interlanguage as a concept has no relevance to stable bilingual and multilingual contexts across

the world

Interlanguage Hypothesis:

The concept of interlanguage is based on following hypothesis:

1. Varieties of English are fossilized forms of standard English.

2. Results of imperfect learning.

Fossilization and world Englishes:

Fossilization is inapt to the context of world Englishes. In multilingual contexts different languages have definite roles. English has definite roles in many societies. The roles and contexts of use are constantly evolving.

In a multilingual context, each language has its use. one language may not be appropriate for use in all domains.

SLA in outer and expanding circles:

SLA models are the teachers and materials. English has various uses outside the classroom. Receives reinforcement and expansion opportunities of classroom learning.

Topic: 129:

SLA Theories and World Englishes

SLA Theory Construction

Immigrants or foreign students in universities are used as sources of data. Learners of English in the outer and Expanding circles are overlooked. Little awareness of the factors relevant to English language learning in these contexts. Lack of relevance b/w SLA theories and World Englishes.

Assumptions of SLA

1. Learning goal is to attain native-like competence to communicate with native speakers.

2. Input comprise the entire range and depth of British and American English.

3. Learners ought to have integrative motivation for language learning.

4. Primary language considered sources of negative and positive transfer.

5. Difference from standard British or American English amount to failure-fossilization or pragmatic failure.

Success in SLA

Five percent of learners are expected to achieve native competence in L2. The others are consigned to the category of interlanguage users.

Topic: 130:

Realities of Second Language Learning.

Realities of outer and expanding circles context.

No-native ~~inter~~ interlocutors.

Native English norms may be viewed unfavourably.

Realities of outer and Circle context.

Input available in indigenized variety of English:

- Teachers • Peers • Materials

Several languages in the linguistic repertoire. Each language with a distinct function. Irrelevance of ideal bilingualism. Functions of English unique to the context. Serves as a high variety in a diglossic situation. Used in administration.

higher court of law, tertiary education overlaps with other languages in informal situations.

Topic: 131:

SLA in Outer and Expanding Circle

Inapplicability of SLA to world Englishes.

Gap b/w classical SLA paradigm and learning of English is outer and Expanding Circle. Inapplicability of SLA concepts and methods to the world Englishes context.

Outer & expanding circle contexts. Multilingual users.

Include different domains of use and require different levels of proficiency. Multilingual are not deficient but proficient users of English and other languages.

Employ code mixing.

Local input:

Bilingual teaching methods, Teachers proficient in local variety of English. Indigenized versions of American popular culture. Creativity in the use of internet. Indigenized varieties

rather than an international and universal English.

Irrelevance of SLA concepts:

Indigenized varieties rather than an international or universal English. Cannot be compared to creolization.

Role of first or Primary languages

Positive role of the first language

Innovations help in 2-ways

Increase communicative competence in the target language. Help in the acculturation of the target language to local context.

Topic: 132:

SLA in Outer & Expanding Circles

Integrating world Englishes into SLA paradigm:

Theory Construction to consider:

- Multilingualism
- Functions of language(s).
- Creative potential of human linguistic behaviour.

Changing SLA scenario.

Some scholars and linguists suggest

the following:

Inclusion of 'indigenized language' as a type of acquisition in SLA typology. New perscriptiveness on SLA. Acceptability of stable variations rather than teaching them as errors. Native speakers to be more tolerant and accepting. Need to increase familiarity with International English.

SLA theories to consider research on the acquisition and use of IVEs. SLA's limitation with regards to offering explanations with regard to learning English in outer and Expanding circles.
