What is inductive and deductive reasoning explain with example?

Inductive Reasoning: Drawing general conclusions from specific observations or patterns.

Example: All observed apples are red, so we conclude that all apples are red.

Deductive Reasoning: Deriving specific conclusions from general principles or premises.

Example: All cats have tails. Fluffy is a cat. Therefore, Fluffy has a tail.

Paper 1

7 MCQs was from Junaid and rest were from handout.

Q1: memory model btana tha Jo store krta hai visual information,touch ko (3 marks)

Ans: Sensory memory temporary roop se visual aur touch information ko store karta hai.

Iconic memory visual information ko, haptic memory touch information ko store karta hai.

Ye memory model humare senses ke incoming information ko process karne ka samay deta hai.

Q2: cursor keys in keyboard btani thi (3 marks)

Ans: Cursor keys keyboard par arrow symbol ke roop mein hote hain. Ye keys text ya cursor movement ke liye istemal hote hain. In keys ki madad se hum document mei upar-niche, left-right navigation aur text selection kar sakte hain.

Q3: people's k name btane thy 1950 mein JB first time computer aisa he Kuch tha yd nhi Sahi SE (5marks)

Q4: goal- design develop k five phases btane thy(5 marks)

1. Analysis and Planning: Project requirements aur objectives ko analyze karke roadmap aur plan taiyar kiya jata hai. Stakeholders ke saath discussions hote hain aur scope, timeline, resources, aur budget finalize kiye jate hain.
2. Design: Project ka design develop kiya jata hai, including architecture, UI, aur overall structure. Design documents, wireframes, prototypes, aur mockups banaye jate hain, user requirements aur aesthetics ko dhyan mein rakhte hue.
3. Development: Project ka actual development shuru hota hai. Code likha jata hai, modules, functions, databases, aur APIs develop kiye jate hain. Programming languages, frameworks, aur tools ka istemal hota hai, testing parallel chalti hai.
4. Testing and Quality Assurance: Project thorough testing aur quality assurance ke liye verify kiya jata hai. Functional, performance, security, aur user acceptance testing techniques ka istemal hota hai. Bugs, errors, aur issues resolve kiye jate hain.
5. Deployment and Maintenance: Project ko live environment mein deploy kiya jata hai. Infrastructure setup kiya jata hai, aur project ko monitor, maintain, aur update kiya jata hai. Maintenance activities jaise bug fixes, security patches, aur feature enhancements perform kiye jate hain.

Paper 2

Q1. Writes three steps of external cognition?

1. Offloading: Using external tools or resources to store information, perform calculations, and reduce cognitive load.
2. Scaffolding: Utilizing external aids like diagrams, checklists, or instructions to support complex tasks and enhance cognitive processes.
3. Collaboration: Engaging in teamwork and leveraging collective knowledge to augment cognition, problem-solving, and decision-making.

Q2. Humans have five senses. What three major senses that are supplementary for interacting with computer. Enlist three.

These three supplementary senses—vision, touch, and hearing—play a crucial role in enhancing human-computer interaction, enabling users to engage with digital interfaces, process information, and communicate effectively with computers.

Q3. Write the types of reasoning? Just names.

1. Deductive Reasoning
2. Inductive Reasoning

3. Abductive Reasoning
4. Analogical Reasoning
5. Causal Reasoning
6. Logical Reasoning
7. Critical Reasoning
8. Intuitive Reasoning
9. Spatial Reasoning
10. Mathematical Reasoning

Q4. What types of gulfs that causes major problems for humans. Enlist them.

1. Complexity: Overly complex GUIs with cluttered interfaces can overwhelm users, making navigation and finding desired functionalities difficult.
2. Inconsistency: Lack of consistency in GUI design, including inconsistent placement of elements and varying interaction patterns, confuses users and hinders usability.
3. Poor Feedback: Inadequate or unclear feedback, such as lack of visual cues or delayed responses, frustrates users and affects their understanding of system status.
4. Limited Customization: GUIs with limited customization options fail to cater to diverse user needs, resulting in suboptimal user experiences.
5. Lack of Accessibility: GUIs ignoring accessibility standards exclude users with disabilities, limiting their ability to interact with the system effectively.

Paper 3

MCQs from maximum from (topper file) and some from Junaid file

Short

Scenario given tha?

Early focus on user and task?

Early focus on user and task involves prioritizing user needs, goals, and behaviors from the start of the design process. It includes user research, understanding user preferences, and identifying core tasks to create user-centric solutions. This approach ensures a tailored and intuitive user experience.

Long

Persona and its types?

A persona is a fictional character representing a user group. Types include user personas, buyer personas, negative personas, primary personas, secondary personas, and persona spectrums.

Navy September 1997? yeh topic dakh lana

what happen when

Computer+microwave=

Computer+data=

Computer+information=

1. Computer + microwave: Potential interference or damage to the computer due to microwave radiation exposure.
2. Computer + data: Processing, storage, and manipulation of data for tasks like analysis, calculations, and retrieval.
3. Computer + information: Handling information through receiving, storing, organizing, processing, and presenting it in various formats.
4. Computers facilitate tasks such as information retrieval, data analysis, and communication for efficient access and sharing of information.
5. Outcomes of combining a computer with other elements depend on specific context and purpose of their interaction.

Long 1

Enlist 5 qualities of software assurance

 Functionality Reliability Usability Efficiency Maintainability Portability

CS408 Human Computer Interaction (HCI) Midterm Paper Fri, 22July, 2022 at 10:00 a.m

3mcqs about color

•Example di hui thi aur options yeh the F/D/V/inV (modal of Attention)

•“Don’t Make me THINK, is the key to a usable product”

"Don't Make Me Think" is a usability principle advocating for intuitive and effortless user interfaces. It emphasizes minimizing cognitive effort and creating products that allow easy navigation and interaction. By following this principle, designers aim to ensure a seamless and user-friendly experience.

•Affordance is a term used to refer to an attribute of an object that allows people to know how to use it.

•In chord keyboards several keys must be pressed at once in order to enter a single character.

• Goms stand for

GOMS stands for "Goals, Operations, Methods, and Selection rules." It is a cognitive modeling technique used to analyze and predict human performance in tasks. It helps inform interface design for improved efficiency and effectiveness.

•When computers first appeared on the commercial scene in the 1950s

In the 1950s, computers emerged on the commercial scene. They were large, expensive machines used by organizations and government agencies. Early computers relied on vacuum tubes, had limited capabilities, and used punch cards or magnetic tape for input/output.

•User personas that are not primary or secondary are supplemental personas

•Quality: “Totality of characteristics of an entity that bear on its ability to satisfy stated and implied needs.”

•There are approximately 120 million rods and 6 million cones in a human eye.

==========

name Usability goals:

• Effective to use (effectiveness)

• Efficient to use (efficiency)

• Safe to use(safety)

• Have good utility (utility)

• Easy to learn (learnability)

• Easy to remember how to use (memorability)

==========

in your view point, how many possible User Persona type lablels include?

A process of designating persona

types determine the amount of influence each persona has on the eventual form and

behavior of the design.

Possible user persona type designations include:

• Primary: the persona’s needs are sufficiently unique to require a distinct interface

form and behavior

• Secondary: primary interface serves the needs of the persona with a minor

modification or addition

• Supplement: the persona's needs are fully satisfied by a primary interface

• Served: the persona is not an actual user of the product, but is indirectly affected

by it and its use

• Negative: the persona is created as an explicit, rhetorical example of whom not to

design for.

==========

(Software application example thi) Usability goals ki fulfilment aur us ka solution batana tha.

========

Suppose I am sitting in my armchair, reading a book. It is dust, and the light has gotten

dimmer and dimmer. I decide to need more light (that is the goal: get more light).

Usability goals fulfillment: Enhancing the usability of the armchair reading experience by providing a solution to improve lighting conditions.

Solution: Install a flexible reading lamp or light source near the armchair that can be easily adjusted to provide adequate illumination. This solution addresses the goal of getting more light, enhancing the usability of the reading experience.

name 7 stages of Norman's interaction modal

Seven stages of action

The stages of execution (intentions, action

sequence, and execution) are coupled with

the stages of evaluation (perception,

interpretation, and evaluation), with goals

common to both stages.

==========

There are different ways in which this method can be associated with design. Beynon-

Davies has suggested that ethnography can be associated with the development as

“ethnography of”, “ethnography for”, and “ethnography within.” define & give real life example

Ethnography of development refers to studies of developers themselves and their workplace, with the aim of understanding the practices of development (e.g. Button and Sharrock). Ethnography for development yields ethnographic studies that can be used as a resource for development, e.g., studies of organizational work. Ethnography within software development is the most common form of study; here the techniques associated with ethnography are integrated into methods and approaches for development.

SDS
Screen Design Standards
DUID
Detailed User Interface Design

2 long questions

Q1.... Almost 63%software projects exceed their cost estimated gives reason?

Around 63% of software projects exceed their cost estimates. The top four reasons for this are:
– Frequent requests for changes from users
– Overlooked tasks – Users' lack of understanding of their own requirements
– Insufficient user-analyst communication and understanding
Communications of the ACM

Q2.... Statements given thi batana tha procedural learning hai ya .... Declarative Learning bs.

Procedural

According to procedural learning we come to any object with questions like how to use it? How to do something? For example, how to use a computer-based application?

Declarative

According to declarative learning we try to find the facts about something. For example, using a computer-based application to understand a given topic.

most mcqs from past papers
3 short questions
1-Usability.
2-difference between analogous and complementary colors.
3-find out usability defects from given statements.
2 long question
1)which questions you ask if you had a task to build an attendence software for employees

Answer:

1. Who are the primary users?
2. What are their goals and tasks?
3. What data needs to be tracked?
4. How often and how will they interact?
5. What are their common challenges?
6. What are the environmental constraints?
7. How can the interface be user-friendly?
8. Are there privacy and security concerns?
9. How to provide clear feedback?
10. How to support administrators?

2)Briefly explain Stereopsis and stereoscope
