

Quizzes

1. The study of phoneme and their articulation is called (segmental)
2. Apposition and clarification are two types of _____. (elaboration)
3. A _____ corpus is a corpus of texts of a particular type, such as newspaper editorials, geography textbooks, academic articles in a particular subject. (specialized)
4. The term _____ has generated substantial controversy in the field of general and applied linguistics. (competence)
5. a collection of spoken or written authentic texts that is representative of a particular area of language use is termed as _____. (Corpus)
6. words that typically occur together are called _____. (collocation)
7. Systematic qualitative analysis in the discourse-historical approach (DHA) takes _____ layers of context. (four)
8. the most exciting developments in the analysis of discourse have been in _____ studies. (intonation)
9. What does EAP stands for? (English for Academic Purposes)
10. A representative corpus must enable analysis of the features. (all of the given, across text types, within text, across texts)

11. Who studied the language of personal ads on the World Wide Web? (Vincent B.Y. Ooi)
12. Which conjunctions includes replative, subtractive, and alternative types? (Extension)
13. The unit of sounds in a language that differentiate one word from another are called (Phoneme)
14. Corpus studies draw on collections of texts that are usually stored and analyzed ____ (electronically).
15. When did English with academic purposes (EAP) emerged in the academic discipline? (1980s)
16. The references to assume shared words outside the text are called _____. (exophoric)
17. Who divided modalities into those that contain an element of will and those who contain no element of will? (Otto Jespersen)
18. Generally, intonation units ____ with a pitch boundary. (end)
19. Genre analysis see texts as representative of wider practices. (rhetorical)
20. qualifying a clause some circumstantial feature of time, place, cause or condition is called its (enhancement)
21. discourse historical approach distinguishes between three dimensions that are (topics that are spoken, discursive strategies, all of the given, textual meanings)
22. English for Academic Purposes (EAP) is usually defined as _____ English with the aim of assisting learners. (teaching)

23. The stress on a syllable within a word is called stress. (lexical)
24. The general words that correspond to major classes of lexical items, are very commonly used with _____ force. (cohesive)
25. who introduced the concept of discourse-organizing words? (McCarthy and Carter)
26. syllables which stand out in the flow of talk are uttered with a relatively _____ intensity. (greater)
27. English is often called a/an _____ language. (VOS)
28. Henry's bought himself a new Jaguar. He practically lives in the car. Here, the car is a _____. (superordinate)
29. George Von Wright was a _____. (Philosopher)
30. Who proposed that the logical treatment of modalities is too narrow, because it is centered on truth values of propositions? (Sulkunen and Törrönen)
31. Rose is a _____ of flower (hyponym)
32. A general corpus is also called _____. (reference corpus)
33. When we listen to stretch of spoken English discourse, we often feel there is a/an _____ to it. (rhythm)
34. The study of phoneme and their articulation is called level. (segmental)
35. Stress on a word, phrase or sentence is called _____ level stress. (sentence)
36. Prosodic stress is also called _____ (word level)
37. Syllables which stand out in the flow of talk will be referred to as _____ syllables (prominent)

38. Genre analysis can be seen as a more specific form of (discourse analysis)
39. Brown and Yule (1983) see the nature of reference in text and in discourse as an action on the part of a/an (speaker/writer)
40. Discourse analysis is looking at texts in relation to the contexts in which they are used. (social)
41. reference to assumed shared worlds outside the text are called _____ (exophoric)

Final-Term

1) what is Text?

Text is the exact, original words written by an author. Text is also a specific work as written by the original author. Text is also commonly used to refer to a text message or to send a text message. Text has several other senses as a noun.

2) systems of Transitivity

In traditional grammar, transitivity was developed as the concept of transitive or intransitive verb (Halliday, 1976) whether the verb takes an object or not, but in SFL it functions to link grammar to the meta functions; however, in Halliday's terms, transitivity as a major component in experiential function of the clause deals with

the “transmission of ideas “representing ‘processes’ or ‘experiences’: actions, events, processes of consciousness and relations” (1985). It is a semantic system to analyze representations of reality in a linguistic text and create the same experience through various lexico-grammatical options influenced by different mind styles or authorial ideology. (Fowler, 1986).

3) Define the term (Discursive Psychology) or fundamental of discursive

Discursive psychology is an approach that addresses psychological matters in terms of how they figure in discourse in conversations over family mealtimes, in therapy sessions, in witness statements. It begins with psychology, as it confronts people as they live their lives. Discursive psychology is usefully understood as working with three fundamental observations about the nature of discourse. Discourse is:

- Oriented to action
- Situated sequentially, institutionally and rhetorically
- Constructed and constructive

These observations’ structure analytic work in DP. We will take them in turn.

4) Differentiate between Cataphoric and anaphoric references with example.

those which look back in the text for their interpretation (anaphoric relations) and those which look forward to the text for their interpretation (cataphoric relations).

5) Three approached for media discourse

The three main approaches to the study of media discourse can be characterized as

- Discourse analytic
- Sociolinguistic
- Nonlinguistic

6) Why rhythm is considered as an important element in spoken English?

Traditionally, rhythm has been considered an important element in the teaching of spoken English. This is probably due to two main factors. Firstly, there does seem to be rhythmically in varying degrees in long stretches of speech, especially carefully considered deliveries such as broadcast talks, fluent reading aloud, speeches and monologues, as well as some ordinary conversation. Secondly, the concept of English as a stress-timed language, deeply rooted in theoretical and applied linguistics, has dominated approaches to the teaching of rhythm.

7) What is the relationship between beats and rhythm?

When we listen to a stretch of spoken English discourse, we often feel that there is a rhythm or regularity to it, which gives it a characteristic sound, different from other languages and not always well-imitated by foreign learners. The impression of rhythm may arise out of a feeling of alternation between strong and weak 'beats'.

8) Discourse analytic approach

Discourse analytic approach is the primary focus of scholars in the study of media discourse. Discourse analytic approaches that underlie a great deal of the research on media can be characterized as hybrids of existing frameworks of pragmatics, conversation analysis, variation, narrative analysis and interactional sociolinguistics optionally interlaced with sociological content analysis. For example, the approach can be “critical” in the sense of looking at social impact or inequality or concern political economy in the sense of the social value of language without necessarily bring into line with a major tradition, such as discourse analysis or media studies.

9) What is EAP?

English for Academic Purposes (EAP) is usually defined as teaching English with the aim of assisting learners’ study or research in that language. In this sense it is a broad term, covering all areas of academic communicative practice such as pre-tertiary, undergraduate and post-graduate teaching, classroom interactions, academic publishing and curriculum issues, as well as research, student and instructional genres (e.g., Hyland, 2009a). The emergence of EAP in the 1980s, as a response to growing numbers of second language (L2) students in university courses and in a framework informed by English for specific purposes, originally produced an agenda concerned with curriculum and instruction rather than with theory and analysis. EAP was then largely a materials and teaching-led movement focusing on texts and on the search for generic study skills, which could be integrated into language courses to make students more efficient learners. EAP has emphasized the rich diversity of texts,

contexts and practices in which students must now operate. While it continues to be heavily involved in syllabus design and it needs analysis and materials development, EAP has moved away from purely pedagogic considerations to become a much more theoretically grounded and research informed innovativeness. The role of EAP has therefore changed in response to changing conditions in the academy. The huge expansion of university places in many countries, together with an increase in full fee-paying international students to compensate for cuts in government support, has resulted in a more culturally, socially and linguistically diverse student population than ever before.

10) Discourse Historical Approach

DHA provides a vehicle for looking at latent power dynamics and the range of potential in agents, because it integrates and triangulates knowledge about historical, inter-textual sources and the background of the social and political fields within which discursive events are embedded. Moreover, the DHA distinguishes between three dimensions that constitute textual meanings and structures: the topics that are spoken/ written about; the discursive strategies employed; and the linguistic means that are drawn upon to realize both topics and strategies (e.g. argumentative strategies, topoi, presuppositions – see below for an extensive discussion).

11) Endophoric referencing

Endophoric reference is the general name for within the text. Endophora is a term that means an expression which refers to

something intra-linguistics i.e. in the same text. For example, in the sentence:

I saw sally yesterday, she was lying on the beach

Here, she is an endophoric expression because it refers to something already mentioned in the text i.e., sally. By contrast she was lying on the beach if it appeared by itself, has an exophoric expression; she' refers to something that the reader is not told about. Without further information, there is no way of knowing the exact meaning of an exophoric term where endophoric expression lies within the text

12) Social and cultural context of genres

An important stage in genre analysis, formerly, is an examination of the social and cultural context in which the genre is used. In the case of a written text, factors that might be considered Include:

- The setting of the text
- The focus and perspective of the text
- The purpose of the text
- The intended audience for the text, their role and purpose in reading the text

The relationship between writers and readers of the text; expectations, conventions and requirements for the text

- The background knowledge, values and understandings it is assumed the writer shares with their readers, including what is important to the reader and what is not
- The relationship of the text has with other texts.

13) What is the difference between reference and substitution?

"It is important to point out differences between reference and ellipsis-substitution. One difference is that reference can reach a long way back in the text whereas ellipsis and substitution are largely limited to the immediately preceding clause. Another key difference is that with reference there is a typical meaning of co-reference. That is, both items typically refer to the same thing. With ellipsis and substitution, this is not the case. There is always some difference between the second instance and the first. If a speaker or writer wants to refer to the same thing, they use reference. If they want to refer to something different, they use ellipsis-substitution (Halliday 1985)."

14) Criteria of Discourse analysis Project or How John listed the good and workable research topics?

In her book *Qualitative Methods in Sociolinguistics*, Johnstone (2000) lists a number of criteria that contribute to the development of a good and workable research topic. In her case, she is talking about research in the area of sociolinguistics. What she says, however, applies equally to discourse analysis projects. These criteria include

- A well-focused idea about spoken or written discourse that is expressed as a question or a set of closely related questions;
- An understanding of how discourse analytic techniques can be used to answer the research question you are asking;
- An understanding of why your question about spoken or written discourse are important in a wider context; that is,

- why answering the question will have practical value and/or be of interest to the world at large;
- Familiarity with and access to the location where your discourse analysis project will be carried out;
 - Ability to get the discourse data that is needed for the research project

15) Interactional sociolinguistics

Interactional sociolinguistics (IS) studies the language use of people in face-to-face interaction. It is a theoretical and methodological perspective on language use with eclectic roots in a wide variety of disciplines such as dialectology, ethnomethodology, conversation analysis, pragmatics, linguistic anthropology, micro-ethnography and sociology. Basically, IS starts from the finding that, when people talk, they are unable to say explicitly enough everything they mean. As a result, to appreciate what is meant, they cannot simply rely on the words that are used but must also depend on background knowledge, to discover what others assumed the relevant context was for producing words in.

Basic-Definitions

1) Adjacency pairs

An adjacency pair is a unit of conversation that contains an exchange of one turn each by two speakers. The turns are functionally related to each other in such a fashion that the first turn requires a certain type or range of types of second turn.

2) Big “C” Conversations (Tools of Inquiry)

“Conversations” (with a capital “C”) are debates in society or within specific social groups (over focused issues like smoking, abortion, or school reform) that large numbers of people recognize, both in terms of what “sides” there are to take in such debates and what sorts of people tend to be on each side.

3) Collocational Patterns

Any pattern of words or grammatical structures (types of words and phrases and clauses) that “hang together” to betoken a particular social language (and the identity associated with it) in the way in which sun hat, swimsuit, sunscreen, a towel, and flip-flops “hang together” to betoken a “sunbather.”

4) Conversational Analysis

A detailed form of discourse analysis that sees conversation as the basic human communicational form and seeks to explicate how people produce and reproduce social order through talk and orientation to talk and each other in social interaction. The approach is almost always just spelled as “CA” and is a branch of

sociology (one that gives up building grand sociological theories in favor of describing the order people actually create and how they create and sustain that order). Manny Schegloff at the University of California at Los Angeles is the best living practitioner of CA.

5) Critical Discourse Analysis

Any form of discourse analysis that seeks to engage with politics (see the Glossary entry for “politics”). Critical discourse analysis deals with whose “interests” are represented, helped, or harmed as people speak and write. When “critical discourse analysis” is spelled as “CDA” it often refers to the work of Norman Fairclough and his associates.

6) Eliciting Exchange

The most common exchange in the classroom is an eliciting exchange (Willis, 1992, pg.113). These exchanges begin with the teacher asking a question (usually one they already know the answer to).

7) Identity

A word used for lots of different things. What I mean by it in this book is this: Different ways of being in the world at different times and places for different purposes; for example, ways of being a “good student,” an “avid bird watcher,” a “mainstream politician,” a “tough cop,” a video-game “gamer,” a “Native American,” and so on and so forth through a nearly endless list. I do not mean your core sense of self, who you take yourself “essentially” to be, though that is an important notion as well. I

often use the term “socially situated identity” or “social identity” instead of just the word “identity” to make clear I am talking about how we recognize and act out different social roles or different social positions in society.

8) language Function

A language function refers to what students do with language as they engage with content and interact with others.

9) Minimal Responses

Responses such as mmmm and yeah are known as minimal responses.

10) Semiotics

A term for the study of sign systems.

11) Sign

Any word or symbol (which could be an image or object) that has meaning (stands for something else thanks to a given concept, interpretation, and convention which relates to the sign and the thing it stands for).

12) Textual Pattern

A level of interpretation which we are involved in as we process texts is that of recognizing textual pattern.

13) Utterance-Token Meaning

It refers to “situated meaning”.
