

- 1) we can introduce new species by A) group animals) Domestic animals C) both
- 2) main types of population desperation? 3
- 3) Tough cometal large developed by dense mass calcium?
- 4) Autogenic succession is controlled by ? biotic or living components
- 5) Types of ecology pyramid? 3
- 6) on basis of climate soil is divided in to groups?
- 7) Term ecology uses used by? Earnest heakl
- 8) /which can eat both plant and animals? omnivovers
- 9) insect pollinated flowers are usually of colour? Yellow or blue
- 10) Average temp of earth has?
- 11) human use of the half the water (fresh , salt ,or both) . fresh water
- 12) cause of ozone distraction is? CFCs
- 13) main reason of species extinctions?
- 14) ecosystem is influenced by?
- 15) Types of biodiversity at spatial scale ? 3
- 16) forms of mutualism ? o Lichen o Mycorrhizae o Root nodules
- 17) Forms of lichens? 1. Crustos 2. Foliose 3. Fruticose
- 18) Define of michorhzia? A mutualistic relationship b/w fungi & roots of higher plants by which both partners are get benefited
- 19) Define of red tide? The harmful and toxic blooms of red Dinoflagellates causes the colour of sea water to become red.
- 20) Define of lichens? A mutualistic association b/w algae & fungus in which both the partners get benefits from each other is known as lichen.
- 21) Paresitism define? Parasitism is a kind of association in which one organism called parasite lives on the expense of other organism, called a host.
- 22) Endoparasite define? Some parasites live inside the body of their hosts & are named as endoparasite.
- 23) apesentic colouration is called? Warning coloration
- 24) Types of biome? 2
- 25) Division of fresh water ecosystem in parts ?
- 26) carbon make uptoof atmosphere? 0.038%
- 27)earth consist of salt water?
- 28) eutrophication define? Too much nutrients causes harmful algal blooms (HABs) which are extremely toxic to living creatures (fish, shellfish, birds and mammals).
- 29) forms of air pollutants?/
- 30) kinds of global warming?/ 5
- 31) Aplha biodiversity define? It refers to the diversity within a particular area or ecosystem, & it is usually expressed by the number of species in that ecosystem.
- 32) mucor is example of? phycomysetes
- 33) Tans of so3 gas erupted into stratosphere? 20000000

34) water cycle consist of following process? **1- Evaporation 2- Transpiration 3-**

Precipitation

35) plant use direct sunlight in process of? **photosynthesis**

36) Autogenic succession is controlled by? **Living componeets**

37) Sub feilds of ecology are ____ **6**

38) Depending upon cell shape the organisms are of ____ **2 types**

39) The plant voila plnansis present in ____

40) Song birds are example of ____ **indicator species**

41) Red tides produces by ____ **dinoflegelates**

42) Cockroaches are example of ____ **omnivovers**

43) Which animal eat 150 ponds of the day ____ **minatee**

44) Eat plant and animal ____ **raccons**

45) Population density of large organisms is ____ **high**

46) More than ____ of all the species recorded are animals ____ **70%**

47) Density independent factor ____ **floods**

48) Zone of leaching ____ **a zone**

49) Fresh water ecosystem are of ____ **3types**

50) Definition of endotherm? **Animals that produce their own body heat through internal mechanisms**

51) Definition of hibernation? **A condition in which animals become inactive usually in cold environments for their survival**

52) When two same species compete ____ **interspecific competition**

53) humming bird and insects polinated are exapmle of ____ **coevolution**

54) epiphytic plants are example of ____ **commensalism**

55) ascomycetes fungi are example of ____ **lichens**

56) definition of root nodules? **It is a mutualistic association b/w nitrogen fixing bacteria & roots of plants of legume family.**

57) cryptic coloration definition? **is a type of camouflage that occurs when an animal takes on color patterns in its environment to prevent the animal from being seen by other animals.**

58) poishess snake is example of ____ **warning coloration**

59) C, N, O & H is total ____ **97%**

60) CO₂ is ____ **0.038%**

61) Resorvior of phosphorus ____ **phosphate salt**

62) Excessive nutrients enter aquatic systems, they stimulate ____ **plant growth**

63) Befouling of air due to release of certain pollutants released due to human activities is known as ____ **air polution**

64) Red tide is example of ____ **dinoflegellats**

65) Cause of ozone diplition ____ **Cfcs**

66) Cfcs is effecting ____ **ozone level**

- 67) Alternaria is example of ____ **deutromycetes**
- 68) Comma shaped bacteria ____ **Vibrio**
- 69) Nile perch introduced which of the following fish **cichlid fish**
- 70) Human exploiting about ____ earth's net primary production **40%**
- 71) Scientists have identified about ____ species **1.8 million**
- 72) It is estimated that ____ of SO₂ gas erupted into the stratosphere ____ **20,000,000 tons**
- 73) The word ecology was first used by ... **Ernest Haeckel**
- 74) Cuckoo song is an example of ... **inducator species**
- 75) The word ecosystem was coined by ... **Tansley**
- 76) The condition at which organisms are most successful in survival ... **Range of optimum**
- 77) Land producers capture ... **1%** ... percent of solar radiation.
- 78) Cockroaches are examples of ... **Omnivores**
- 79) Volume of nitrogen in atmosphere ... **78%**
- 80) Definition of ectotherms. 8. Definition of auto and allogenic succession...
- 81) Hibernating animals have ... **Low body temperature**
- 82) Human eye can detect electromagnetic radiations of wavelength range of ... **360-760nm.**
- 83) Humming birds are an example of ... **Coevolution.**
- 84) Types of soil ... **2**
- 85) Definition of parasitism. 14) Counter shading ... 15) Aposematic coloration.
- 86) Heliconius are an example of ... **Mimicry.**
- 87) Abbreviation of DMS. **Dimethyl sulphide**
- 88) KINDS OF AIR POLLUTION? ... **6**
- 89) CFCs destroy the ... level in atmosphere ... **Ozone level**
- 90) Recorded species of animals are ... **70%**
- 91) Which animal eats the 75 kinds of foods in a day ... **Giraffe**
- 92) Main source of species extinction ... **habitat loss and fragmentation**
- 93) Comma shaped bacteria are ... **Vibrio**
- 94) Example of thermophiles. **Thermus aquaticus and thermococcus litoralis**
- 95) Protists were first used by ... **Ernest Haeckel** ...
- 96) Plasmodium is the characteristic of ... **Slime mold**
- 97) Mushrooms are the examples of ... **Basidiomycetes**
- 98) Definition of Torpor? **A condition in which the rate of metabolism, circulation and respiration of individuals decreases when they are not feeding**
- 99) Inertia? **The ability of a living system, such as a grassland or a forest, to survive in conditions of moderate disturbances.**

- 100) Camouflage? is a kind of coloration or patterns that help an animal to appear to blend with its surroundings.
