ENG510 SUBJECTIVE

By niMma mAlik

Mids SubJective

What is isogloss?

An **isogloss** is a geographic boundary that separates regions based on differences in linguistic features, such as pronunciation, word usage, or grammar. In other words, it's like a map line that shows where one particular way of speaking ends and another begins.

OR

The area where one item was found and areas where others were found, showing a boundary for each area called an isogloss (from **Greek iso- 'same' and gloss- `tongue')**.

For example:

- In the U.S., some people say "soda," others say "pop," and others say "coke" for a soft drink. The regions where each term is commonly used can be marked off by isoglosses.

What Is Free Variation?

Free variation refers to a situation in linguistics where two (or more) sounds, forms, or expressions can be used interchangeably without changing the meaning of a word or sentence, and without being considered incorrect by native speakers.

In simpler terms:

It's when different ways of saying something are both accepted and mean the same thing — it's just a matter of personal style, habit, or regional influence. Free variation doesn't follow strict grammar or phonological rules

Three Measuring levels of Kachru Continuum of bilingualism?

Kachru (1969) has also discussed different types of bilingualism, and he refers to the continuum of bilingualism using three measuring points: **a zero point, a central and an upper point** (p.284).

Zero point refers to competence in very restricted domains such as counting. Richards (1974) gives the example of African market women who have a very limited knowledge of English that they use to attract the customers towards the items they are selling.

On the central point Kachru (1969) places the law courts, administration, civil servants and teachers.

The upper level is of those who can use English effectively for social control such as government officials.

How many major Language Varieties in Papua New Guinea. Write names

Papua New Guinea is one of the most linguistically diverse countries in the world. It has **over 800 individual languages**, but when we talk about **major language varieties** (used by large portions of the population or with official/functional status), there are **three main ones** commonly recognized:

1) Tok Pisin
2) Hiri Motu
3) English

Linguists generally recognize **two major language families** in Papua New Guinea comprising between **700 and 800 languages**, **Austronesian and non-Austronesian** (or Papuan).

What are the three Languages spoken by individual traveling in real but exotic world?

The phrase **"individual traveling in a real but exotic world"** often appears in discussions about **post-colonial literature**, **World Englishes**, or **multilingual societies**. It typically refers to individuals who navigate different cultures and identities, especially in former colonies where multiple languages are used.

In such a context, the **three languages** commonly spoken by such an individual are:

1) Mother Tongue (L1)
2) Colonial Language (L2)
3) International Language / Global English

fill in the blanks from these topics:

Language Varieties/ Lect and Language Planning.

What is Social Media??

Social media refers to online platforms and technologies that allow people to create, share, and interact with content and each other in real-time. It enables communication, networking, and the exchange of information, ideas, and media (like photos, videos, and text) across the internet.

What is Code switching and code mixing?

Code-Switching:

The **alternation between two or more languages or language varieties** within a single conversation, sentence, or even phrase — but each switch follows clear grammatical boundaries.

🔷 **Example:**

"I told him already, **but woh sun hi nahi raha tha**."
(English + Hindi)
Translation: "I told him already, but he just wasn't listening."

Code-Mixing:

The insertion of words or phrases from one language into another within a single sentence or structure, often more fluid and without strict boundaries.

🔷 **Example:**

"I'm going to the **bazaar** to buy some veggies."
(English sentence with a Hindi/Urdu noun)

Examples of tag questions?

In Pakistani context women use more tag questions which shows the social positioning of women in our society.

- If the main sentence is **positive**, the tag is **negative**.
  → *"You're late, aren't you?"*
- If the main sentence is **negative**, the tag is **positive**.
  → *"She isn't ready, is she?"*

Examples:

1) You're coming to the party, *aren't you*?
2) She doesn't like coffee, *does she*?
3) It's a beautiful day, *isn't it*?
4) We haven't met before, *have we*?
5) He can speak Spanish, *can't he*?

What is Jargon?

Jargon is a type of specialized language used by people within a particular profession, field, or group. It includes terms, abbreviations, or expressions that may be difficult for outsiders to understand.

OR

Jargon is the "insider language" of a particular profession or group.

Examples of Jargon:

Field	Jargon Example	Meaning
Medicine	"BP"	Blood Pressure
Computers	Wi-fi	Wireless internet Connection
Business	" ROI"	Return on Investment

3 main journal who research on sociolinguistics?

There are major English-language journals devoted to research publications which include:

- Language in Society
- Language Variation and Change
- International Journal of the Sociology of Language

List two figures with whom the theory or social class is associated?

Theories of social class are associated with figures like Karl Marx and Max Weber.

Name the 5 factors that can influence person's linguistics identity?

1) Religion
2) Family and friends
3) Regional contexts
4) Historical contexts
5) Social Class
6) Professions

Write aspects of linguistic hegemony

1) Some hegemonic languages such as English has spread worldwide.
2) More interconnected world
3) Increasing population

4) Increasing population mobility
5) Changing world scenario and heterogeneity of language practices
6) Speed of change in life and consequently in language practices

Fill in the blanks about Labov or bell

Three titles for received pronunciation?

Received Pronunciation (RP) — the prestigious accent of British English — is known by several other titles, especially in linguistic and sociolinguistic contexts.

Here are three common titles or alternative names for Received Pronunciation:

1) BBC English
2) The Queen's English (or The King's English, depending on the monarch)
3) Oxford English
4) Standard British English

Fill blanks regarding the topic of politeness

Fill blanks regarding topic of language repertoire

Fill blanks regarding English in United States

Factors Causing Language Variation?

1) Nature of participants, their relationship (socio-economic, sexual, occupational, etc.)
2) Number of participants (face-to-face or one addressing a large audience, etc.)
3) Role of participants (teacher/student /priest/ father/son/ husband/ wife, etc.)
4) Function of speech event (persuasion, request for information ritual, verbal, etc.)
5) Nature of medium (speech, writing, scripted speech, speech reinforced by gesture, etc.)
6) Genre of discourse (scientific, experiment, sport, art, religion, etc.)
7) Physical setting (noisy / quiet / public / private / family / formal/familiar/ unfamiliar, etc.)

What is diachronic linguistics?

The term diachronic consists of '**dia' that means 'throughout'**; and '**chron' that means 'time'**. Diachronic linguistics is the study of language through different periods in history. It maps the shifts and fractures and mutations of languages over the centuries. In gross outline, it is similar to evolutionary biology, which maps the shifts and transformations of rocks. Diachronic variation deals with language change over time.

For example, tracing the development of English from the Old English period to the twentieth century is a diachronic study.

What is verbal repertoire and speech repertoire?

Verbal Repertoire:

This refers to **all the language varieties** a person knows and uses — not just different languages, but also dialects, styles, and registers.

Examples:

1. Using technical jargon in a professional setting.

2. Switching to informal slang with friends.

3. Using persuasive language in a sales pitch.

Speech Repertoire:

The variety of speaking styles, tones, and language varieties a person uses in different contexts or situations.

Examples:

1. Code-switching between languages or dialects.

2. Adopting a formal tone in a job interview.

3. Using a more casual tone with family and friends.

What Is Accent?

Accent is a distinctive way of pronouncing a language, especially one associated with a particular country, area, or social class for example, 'a strong American accent'. **Another definition** is: a distinct emphasis given to a syllable or word in speech by stress or pitch.

5 examples of computing jargon?

1) CD-ROM (Compact Disc Read Only Memory) - a pre-pressed compact disc which contains data or music playback.
2) Chip (or integrated circuit) – a miniaturized electronic circuit
3) Control stores the memory that stores the microcode of a CPU.
4) Core the portion of a CPU which actually performs arithmetic and logical operations.
5) Core memory in modern usage, a synonym for main memory, dating back from the presemiconductor-chip times when the dominant main memory technology was magnetic core memory.
6) CPU Central processing unit - the portion of a computer system that executes the instructions of a computer program.
7) Conventional PCI Conventional Peripheral Component Interconnect - a computer bus for attaching hardware devices in a computer.

5 subcategories of language as a variety?

When we talk about language as a variety, we're usually referring to how language changes based on different factors — like region, social group, context, or purpose.

1) Dialect
2) Idiolect
3) register
4) social dialect
5) Jargon
6) Ethnolect
7) Pidgin and Creole

How many letters in Korean language system?

The Korean writing system, Hangul, has a total **of 24 letters**. These are comprised of 14 consonants and 10 vowels.

Fill in the blanks 5 points from this topic (USA English)

What is language policy and language planning (LPLP)?

Language Policy (LP):

- **Definition:** Language policy refers to the ideas, laws, regulations, and rules that influence how languages are used within a society.
- **Example:** A government declaring an official language, like English in India or Korean in South Korea.

Language Planning (LP):

- **Definition:** Language planning is the deliberate effort to influence the function, structure, or acquisition of languages or language varieties within a speech community.
- **Example:** Creating a standardized grammar or spelling system for a language.

Why it Matters:

LPLP plays a major role in:

- National identity
- Education systems
- Preservation of endangered languages
- Multilingual communication and access

Relationship b/w language & society?

Language and social interaction have a reciprocal relationship. Language shapes social interactions and social interactions shape language. Anthropological linguistics looks at: Language in specific culture and how it is affected. Sociolinguistics is the study of the connection between language and society and the way people use language in different social situations. When we say language is a social-cultural-geographical phenomenon, what does it mean? We also need to think about how does society affect language? It is in society that man acquires and uses language. Kinds of problems in this relationship include communities which develop a standard language, and the reactions of minority adds to this (as in Belgium, India, Pakistan or Wales); people have to be educated to linguistic level where they can cope with the demands of a variety of social situations. Communication exists between nations or groups using a different language. Problems are caused by linguistic change in response to social factors. The problems are caused or solved by bilingualism or multilingualism. Scope of sociolinguistics includes the interaction of language and various sociologically definable variables such as social class, specific social situation, status and roles of speakers etc.

Language and society influence each other constantly. Language is not just a tool for communication—it's a living part of culture, identity, and social structure.

Explain language policy?

📚 Definition:

Language Policy refers to the official decisions, laws, and practices a government or institution adopts to manage language use in a society.

It's the **"what and why"** behind language use in public life:

What language(s) should be used in schools, courts, media, and government?
Why should those languages be chosen or promoted?

🎯 Example:

In **South Korea**, the government promotes **Korean (Hangul)** as the national and official language. Language policies have helped standardize Korean and preserve it despite past foreign influences.

🧠 Why Language Policy Matters:

- Preserves cultural identity
- Promotes national unity
- Ensures equal access to services and education
- Can empower or marginalize communities, depending on how it's applied

Explain The Ideology of Standard Language.

The **ideology of standard language** is the **belief that one variety of a language is superior**, more "correct," or "purer" than others—and that it should be used in formal settings like schools, media, and government.

The ideology of a standard language is a complex issue. If we look at many widely used languages, such as English, French and Spanish, each possesses a standard variety. This affects how speakers think about their own language and about language in general. Speakers of such widely used languages, unlike speakers of some less well-known languages, live in standard language cultures. In such cultures, language attitudes are dominated by powerful ideological positions that are largely based on the supposed existence of this standard form, and these taken together, can be said to constitute the standard language ideology or 'ideology of the standard language'. Speakers are not usually conscious that they are conditioned by these ideological positions. Usually, they believe their attitudes to language as common sense and assume that virtually everyone agrees. If we look around, we can see that standardization applies to many things such as weights and measures, electrical plugs fittings and factory-made objects. This

standardization is desirable for functional reasons. Exact value of each measure should be agreed among users and each relevant object should be exactly the same as others. In fact, the process, standardization consists of the imposition of uniformity.

What is speech community?

The term speech community is derived from the German Sprachgemeinschaft. A speech community is a group of people who share a common language or dialect and follow similar rules for speaking and interpreting language.

Another definition of the term speech community is, "A speech community is a group of people who share a set of linguistic norms and expectations with regard to how their language should be used".

🧠 **Examples of Speech Communities:**

- Teenagers who use internet slang (e.g., "bet," "slay," "no cap")
- Lawyers using legal jargon in courtrooms
- People from a specific region speaking a local dialect

Differentiate between bilingualism and bilinguality?

bilingualism	**bilinguality**
Bilingualism refers to the state of a linguistic community in which two languages are in contact with the result that two codes can be used in the same interaction and that a number of individuals are bilingual (societal bilingualism).	Bilinguality is the psychological state of an individual who has access to more than one linguistic code as a means of social communication.
bilingualism is the logical state of the individual who has access to more than one linguistic code.	bilinguality is 'psycho- measurement
Example: A country like Canada promoting English and French officially.	**Example:** A person who grew up speaking both Hindi and English at home.
Bilingualism is about the outside world → society, schools, work, etc.	Bilinguality is about what's happening inside the mind of the speaker.

differentiate between inter-sentential & intra-sentential switching?

Intra-sentential Switching:

This takes place within the boundaries of a sentence or a clause. This is limited to the mixing of words or phrases of one language into the other.

Intra-sentential = switch within a sentence

Examples for Intra sentential switching:

- ❖ woh bohat intelligent hai; Khana bohat tasty hai.

Inter-sentential Switching:

This takes place at the boundary of sentences or clauses. So, the speaker switches from one language to the other as he or he moves from one sentence/ clause to the other.

Inter-sentential = switch between sentences

Examples of Inter-sentential switching:

- ❖ Khana bohat acha hai but I don't feel like eating; woh bohat zaheen hai and I like intelligent people.

two types of switching?

According to Wardhaugh (1992), there are two types of switching:

1. Situational = when the languages used change according to the situations the speakers find themselves in

2. Metaphorical= a change of topic requires a change of code

What does language attitude mean?

language attitudes are the feelings people have about their own language variety or the languages or language varieties of the others.

These attitudes can be:

- Positive
- Negative
- Neutral

Examples include for instance: Women talk too much; In the Appalachians they speak like Shakespeare; Black children are verbally deprived. They speak really bad English down south and in New York City etc.

Write the processes of typical standard language?

1) Selection
2) Codification
3) Elaboration of function
4) Acceptance

What is Codification?

Some agency such as an academy does the process of codification. The production of written dictionaries and grammar books plays an important role to 'fix' the variety, it makes everyone to agrees on what is correct. Once codification is done, it becomes necessary for many ambitious citizens to learn the correct forms and not to use in writing any 'incorrect' forms that may exist in their native variety.

In the context of a typical standard language, codification is the process of fixing and formalizing the rules of a language so that it becomes the official, "correct," or standard form used in education, media, government, and public life.

🔍 **Example:**

- **Standard English**:

Codified through dictionaries (like the Oxford English Dictionary) and grammar books that define "proper" usage.

What is Language Contact?

Language contact occurs when speakers of two or more languages or varieties interact and influence each other. The study of language contact is called contact linguistics. Language contact happens when **speakers of different languages or dialects interact regularly**, leading to **influence or change** in one or both languages.

What is The Idea of Community of Practice?

Eckert and Ginet (1998) define it as 'an aggregate of people who come together around mutual engagements in some common endeavor. Ways of doing things, ways of talking, beliefs, values, power relations in short, practices emerge in the course of their joint activity around that endeavor. A community of practice is at the same time its members and what its members are doing to make them a community. The examples are a group of workers in a factory, an extended family, an adolescent gang, a women's fitness group, a classroom etc. Groups and communities themselves are also **ever changing.**

Relationship between language and identity?

If we take the position that linguistic communities are not homogeneous and consensual, rather they are heterogeneous and conflicted, we need to understand how power is implicated in relationships between individuals, communities, and nations. This is directly relevant to our understanding of the relationship between language and identity. Bourdieu (1977) notes, the value ascribed to speech cannot be understood apart from the person who speaks, and the person who speaks cannot be understood apart from larger networks of social relationships.

Every time we speak, we are negotiating and renegotiating our sense of self in relation to the larger social world, and reorganizing that relationship across time and space. What is implicated in this negotiation of identity?

- gender
- race
- class
- ethnicity
- sexual orientation
- age

Language is a powerful marker of identity—it reflects **who we are**, **where we belong**, and **how we want others to see us**. The languages or varieties we use help shape both our **individual** and **social identity**.

Two standard varieties of Korean language?

Two standard varieties are found here:

1) The So¨ul (Seoul) dialect in South Korea
2) The P&yo¨ngyang dialect in North Korea

What is Synchronic Variation?

Synchronic linguistics is the study of a language at a given point in time. A synchronic approach (from Greek συν- "together" and χρόνος "time") considers a language at a moment in time without taking its history into account. Synchronic linguistics is contrasted with diachronic linguistics (or historical linguistics), the study of a language over a period of time.

Synchronic variation in sociolinguistics focuses on the following:

- **Without reference to earlier or later stages**
- Explores varieties of dialects and their various features
- Explores the functioning of language at a single time point

What is the link between power and sociolinguist?

The link between power and sociolinguistics is central to understanding how language operates in society.

Sociolinguistics studies how people use language in society. Power is linked to this because powerful people or groups usually decide which language or way of speaking is "correct" or "better." This gives them more respect and control. People with less power often speak different languages or styles, and they can be treated unfairly because of it.

Power and sociolinguistics are connected because the way people speak can give them more respect or take it away. Powerful people decide what kind of language is "good," and this can affect how others are treated in society.

📜 **Simple Example:**

In school, if the teacher only likes students who speak perfect English, then those who speak Punjabi or Sindhi might be ignored.

This shows how language creates power differences.

What Is a Register? And also, its examples

The term ‘register’ is widely used in sociolinguistics. It is used to refer to 'varieties according to use', in contrast with dialects, defined as 'varieties according to user' (Cheshire,1992: Downes,1994: Biber,1988). The distinction is needed because the same person may use very different linguistic items to express more or less the same meaning on different occasions. Another way of defining register is: “**A variety of a language used for a particular purpose or in a particular social setting**”.

A register is the way we change our language depending on who we are talking to and what the situation is.

OR

A **register** is a type or style of language used in a specific situation or for a specific purpose.

You don’t always speak the same way. You use different words, tone, and style when talking to:

- your friends 😄
- your teacher 👩‍🏫
- at a job interview 👨‍💼
- or while texting 📱

Each of these is a different **register**.

📚 **Examples of Register:**

1) Talking to a friend (informal):

→ "Hey! What's up?"

2) Talking to a teacher (formal)

→ "Good morning, sir. How are you today?"

3) Sending a text message (casual):

→ "LOL that was funny!"

→ "brb" (be right back)

4) In a classroom (educational):

→ "Water boils at 100 degrees Celsius."

5) In a hospital (medical):

→ "The patient needs to take this medicine twice a day."

6) In a mosque or church (religious):

→ "May God bless you."

7) In a court (legal):

→ "I swear to tell the truth and nothing but the truth."

Colonial occupation of Japan by Japanese?

The modern effort to establish Han&gu¨l as the writing system of the Korean language was ended in 1910 by Japan, which formally annexed the peninsula as a colony of its empire. Colonial occupation by Japanese resulted in making Japanese the official language. Korean was suppressed by laws. Japanese became language of instruction in schools. In 1940 Korean people were forced to use Japanese surnames. In 1945 when Japanese occupation ended, there was a re-establishment of Korean. After the division of the country in 1945, each nation developed its own language policy. In North Korea, Han&gu¨l was adopted as the sole system for writing Korean; Chinese characters are never used and are replaced with their phonetic equivalent in Han&gu¨l. In South Korea, the abolition of Chinese characters from written Korean has been attempted with government support more than once but never maintained beyond a few years. Both countries have introduced campaigns to discontinue use of any words of foreign origin in

everyday speech, especially words of Chinese origin. They encourage the use of words of Korean origin.

Define the term language variety.

In linguistics, language variety refers to a specific form of language used by a particular group of people, in a specific situation, or in a certain region.

Variety is a 'specific set of linguistic items' or 'human speech patterns' presumably sounds, words, grammatical features etc. Linguists commonly use language variety or simply variety as a cover term for any of the overlapping subcategories of a language, including dialect, idiolect, register, and social dialect.

Examples of Language Variety:

- **Regional Variety**:

People in the UK might say "lorry" for truck, while people in **the US** say "truck."

- **Social Variety**:

Teenagers may use slang words like "lit" or "savage" that adults don't use.

According to audience design framework what is the biggest reason a speaker changes?

A New Zealand **sociolinguist Bell (**1984) was **the first to** present an account of stylistic variation based on 'Audience Design framework' which is today the most widely used approach to language style.

It proposes that the main reason speakers shift their language style is that they are responding to their listeners. This approach grew out of an early study on the language of radio news in New Zealand. At that time (1974) the organization of New Zealand public broadcasting meant that two of the radio stations being studied originated in the same suite of studios in Wellington, with the same newsreaders heard on both networks. The 'National Programme' had a higher status audience than did the 'Community Network'.

The biggest reason a speaker changes their language is to effectively engage and connect with their audience, ensuring that their message is understood and accepted based on the social context and relationship with the listener.

Arguments on the Work of labov in sociolinguistics?

William Labov (1927) has been a **prominent voice in American linguistics** since the early 1960s.

1) He pioneered an approach to investigating the relationship between language and society.
2) He developed a field known as "**variationist sociolinguistics**".
3) Labov's research demonstrates that linguistic variation is pervasive and highly structured. It reveals regular patterns of co-occurrence between language forms, such as the **pronunciation of a particular vowel**, and social categories, such as socioeconomic classes. His approach is distinguished from others within sociolinguistics by its reliance on quantitative methods.
4) He also examined **semantic features e.g.,** quantifiers like 'each' and 'all' and grammatical features e.g., contraction and deletion of the copula, though the study of phonological variation has predominated in his work.
5) The methods he used to collect data for his study of the varieties of English spoken in New York City, published as **The Social Stratification of English** in New York City (1966) have been influential in social dialectology.
6) In the late 1960s and early 1970s, his studies of the linguistic features of **African American Vernacular English (AAVE)** were also influential.
7) The Study of Nonstandard English (1969)
8) Language in the Inner City: Studies in Black English Vernacular (1972)
9) Sociolinguistic Patterns (1972)
10) Principles of Linguistic Change (vol.I Internal Factors, 1994)
11) VOL.II Social Factors, (2001)
12) VOL.III Cognitive and Cultural factors, (2010)
13) With Sharon Ash and Charles Boberg, The Atlas of North American English (2006)

What are Multilingual Societies and Status of Languages?

In multilingual societies, multiple languages are spoken by different groups of people, often within the same geographical area. The status of languages in these societies refers to the social, political, and cultural value assigned to different languages. Some languages are seen as prestigious and important, while others might be viewed as less valuable or even oppressed. In multilingual societies, languages can have different statuses. Some are official and prestigious, while others are minority or endangered languages**.** A multilingual society is one where people speak multiple languages.

In multilingual societies, the status of languages reflects complex social, political, and economic dynamics. High-status languages often lead to more opportunities and power, while low-status languages may be at risk of disappearing or being marginalized. Understanding these dynamics is crucial to appreciating the linguistic diversity and challenges that exist in multilingual communities.

In our imaginary world we set boundaries which are impassable, what are the two main boundaries?

In our imaginary world there is a society which is clearly defined by some natural boundary and impassable in either direction. The purpose of postulating this boundary is to guarantee:

- No members of other communities join and mix their own language.
- Members of this community never leave it and take their language to another, thereby complicating the perfect coincidence between language and community.

What is the difference between jargon and dialect?

Jargon	dialect
Jargon is a type of **specialized language** used by a specific group of people. It includes words and expressions that are understood only by people within that group or profession.	A dialect is a variation of a language spoken by a particular group of people based on region, social class, or ethnicity. Dialects involve **differences in accent, vocabulary, grammar, and pronunciation**.
Jargon helps people in **specific fields or professions communicate** quickly and precisely.	Dialects help define a **person's geographical location, social background, or cultural identity.**
In **medicine**, terms like **"hypertension"** (high blood pressure) or **"cardiologist"** (heart specialist) are part of medical jargon. In **computing**, terms like **"RAM"** (random access memory) or **"URL"** (uniform resource locator) are jargon.	American **English vs. British English**: People in the UK may say "lorry" for "truck," while people in the US say "truck." **Southern American English:** In the Southern US, people might say "y'all" for "you all," which is a regional dialect feature.

What are two broad types of language variety?

According to the Oxford Companion to the English Language (1992), there are two broad types of language variety:

1) **User-related varieties**, associated with particular people and often places
2) **Use-related varieties**, associated with function, such as legal English (the language of courts, contracts, etc.) and literary English (the typical usage of literary texts, conversations, etc.)

How linguistics is different from sociolinguists??

Linguistics

Linguistics is the scientific study of language. It looks at how language works—its sounds, words, grammar, and structure.

◆ **Linguistics Example:**

A linguist might study how the word **"unhappy"** is made:

- **"un-"** = a prefix that means "not"
- **"happy"** = the root word

So, "unhappy" = **not happy**

They are interested in the **structure** of the word, not who says it or why.

Sociolinguistics

Sociolinguistics is a branch of linguistics. It studies how language is used in society. It focuses on how people speak differently

🔷 **Sociolinguistics Example:**

A sociolinguist might ask:

- Why do some people say "**gonna**" instead of "**going to**"?

→ It depends on if they're speaking casually or formally.

What are the regional languages of Pakistan??

Pakistan is a linguistically diverse country with several regional languages spoken across its provinces and regions. Here are the main regional languages:

1) Punjabi
2) Sindhi
3) Pashto
4) Balochi
5) Saraiki
6) Hindko
7) Kashmiri

What is the process of Language change?

The process of language change refers to how languages evolve over time due to various social, cultural, and linguistic factors. It's a natural and ongoing process that affects all languages.

🔄 **Main Processes of Language Change**

1) Phonological Change (Sound Change)

2) Morphological Change
3) Syntactic Change
4) Semantic Change
5) Lexical Change (Vocabulary Change)

Example from English:

- Old English
- Middle English
- Modern English

Critical period theory?

According to the critical period theory if learning takes place after the critical period (usually considered around puberty) for acquiring native-like pronunciation, an individual is unlikely to acquire a native-like accent. There are social factors that play a role in this regard. When a group defines a standard pronunciation, speakers who deviate from it are often said to "speak with an accent". People from the United States would "speak with an accent" from the point of view of an Australian, and vice versa.

Main difference between "variants" and "variables"?

Variable

- A variable is the feature or category that can change in speech.

Variant

- A variant is the actual form or version that fills that slot.

In sociolinguistics, a **variable** is a part of language that can be said in different ways, while **variants** are the actual forms people use. For example, the ending **"-ing"** in English words like "running" is a variable. Some people say **"running"** clearly, while others say **"runnin'"**—these are two **variants** of the same variable.

Write down the classical division of language policy and planning?

the classic division of LPLP into: status planning, corpus planning and **acquisition planning** (Cooper, 1989).

Status Planning:

- Made at the highest levels of a polity
- Enshrined in law
- This is the case when a language is formally adopted as a national language.

Corpus Planning:

- Corpus planning is an attempt to **change the forms and structures of the language itself**.
- This task is often undertaken by national language planning agencies.
- It involves processes of codification and standardization.

Acquisition Planning:
