ENG511 MCQs

By niMma mAlik

Finals 2K25

IMP MCQs

1) The Sapir-Whorf hypothesis has strong as well as **weak points**.

2) The language a person speaks affects **his thoughts** and perspectives on the world.

3) Deaf persons without language **can think**.

4) Attempts to teach language (or a language like system of communication) to other primates may be divided into **three** groups.

5) Lateralization is not limited to humans or even **to primates**.

6) The notion that language shapes thought patterns is commonly referred to as the **Whorf** hypothesis.

7) The meaning of words is **linguistic** in origin.

8) Evolution of language is the **gradual change** in human language over time.

9) The right hemisphere (RH) has some talents in the **linguistic** realm.

10) The development of lateralization from examining the results of a surgical operation known as a **hemispherectomy**.

11) Speech is Essential for **Thought**.

12) In evolutionary terms, speech may be an example of **exaptation**.

13) The nervous system in humans is predominantly **contralateral**.

14) **Linguistic determinism** refers to the notion that a language determines certain nonlinguistic cognitive processes.

15) Linguistic determinism and relativity were valid concepts. They can be broadly organized into lexical and **grammatical** examples.

16) Animal communication systems are both interesting and impressive, but **very limited** in what they are able to express.

17) With regard to our evolutionary ancestors, **the social cognition hypothesis** is that language evolved as a bonding device.

18) Darwinian theory is based on the concept of **continuity**.

19) Sapir and Whorf state that language and thought are two **closely** related terms.

20) the learning of **language** will determine or influence the way we understand our culture and the world.

21) Lack of vocabulary does not indicate lack of **concept**.

22) studies of very young infants have found right-ear advantages for **speech** as well.

23) In English, there is a distinction between what Whorf called individual nouns (more commonly called count nouns) and **mass nouns**.

24) Thus, Wernicke's aphasia is associated with deficits in **comprehension and semantic** organization.

25) **Agrammatic patients** have a selective deficit in accessing closed-class words.

26) Parameters is a framework within **generative linguistics.**

27) **English** is a very strict word-order language.

28) The human brain is divided **into two hemispheres** - left and right hemispheres.

29) There are two main functions that the Wernicke-Geschwind model explores: comprehension and responding to the **written word** and comprehension and responding to **spoken language**.

30) **positive evidence** is evidence that a particular utterance is **grammatical.**

31) **negative evidence is** evidence that a particular utterance is **ungrammatical.**

32) **Persons with Aphasia** (PWA)

33) Wernicke's aphasia, also known as **receptive aphasia.**

34) **Specific language impairment** (SLI).

35) Unlike **pidgins**, the creoles resembled the structural rules of other languages.

36) Pure alexia refers to the inability **to read**.

37) **The corpus callosum** connects the left side of the brain to the right side, each side being known **as a hemisphere**.

38) Learning rules by **self-discovery** is the essence of the process of induction.

39) Explication **increases** with age.

40) **Learning styles** are individual differences in learning.

41) **Strategy-based Instruction** (SBI).

42) Perceptual learning style is an approach to learning through the **five senses**.

43) most successful learners utilize both **visual and auditory** input.

44) **Compensation strategies** are communication strategies used by **learners to compensate** for limitations in their language.

45) **Communication strategies** are strategies that learners use to **overcome these problems** in order to convey their intended meaning.

46) **Classical Method** focuses on **grammatical rules, memorization**.

47) **Explication**: The nature of explication is the process whereby the rules and structures of a second language are explained to a learner.

48) There is no demonstrated critical age for **learning syntax**.

49) Audio Lingual Method (ALM) was a rejection of its classical predecessor, the GTM **Grammar-Translation Method.**

50) **Metacognitive strategies** refer to methods used to help students understand the way they learn.

51) **Chinese preschoolers are no better than American preschoolers** at counting between **1 and 10 or beyond 99**.

52) In actuality, it is not that children learn language **better than** adults, but that adults and children learn language differently.

53) People who adopt the **cognitive strategy** tend to analyze and reason.

54) **Three types** of social structures which can affect the acquisition of second languages are: **sociolinguistic setting, specific social factors, and situational factors**.

55) **Strategy Inventory for Language Learning** (SILL)

56) The SILL's **50 items**, divided into **six categories**, each present a possible strategy.

57) Learning styles mediate between **emotion and cognition.**

58) The term **"learning styles"** speaks to the understanding that every student learns differently.

59) **Anxiety** includes uncomfortable feelings when learning or using the new language.

60) attribution theory in terms of **four** explanations for success.

61) **Willingness to communicate** (WTC)

62) A **field independent (FI) style** enables you to distinguish parts **from a whole**, to concentrate on something.

63) Several different manifestations of SB1 can be found **in language classes** around the world.

64) there is evidence in neurological research that as the human brain matures certain functions assigned to the left hemisphere is called **(lateralized)**

65) **empathy** is the process of "**putting yourself into someone else's shoes,**" of reaching beyond the self to understand what another person is feeling.

66) Mutual exclusivity might influence **word generalization**.

67) **Aphasia** is the inability to understand speech or to produce fluent and coherent speech.

68) Children focus on **thematic relations** between objects when categorizing.

69) A cognitive-linguistic impairment can often result from a **right brain** injury.

70) **Cognition** is "the mental action or process of acquiring knowledge and understanding through thought and experience.

71) **A sensorimotor schema** is a psychological construct which gathers together the perceptions.

72) **Operating principles** are children's preferred ways of taking in (or operating on) information.

73) The core symptoms of Boca's aphasia are an **agrammatic spontaneous** speech production.

74) Classroom is **isolated from** the rest of social life.

75) **Dyslexia** is characterized by difficulties with accurate and / or fluent word recognition and by poor spelling and decoding abilities.

76) The results of **color** term studies suggest that the presence of a brief verbal expression in a language influence certain cognitive process.

77) For many **foreign-language (FL)** learners of Spanish, one of the most unique grammatical constructs of the **Spanish** language is the subjunctive.

78) **Neurolinguistics** is the branch of linguistics that analyzes the language impairments that follow brain damage in terms of the principles of language structure.

79) English marks grammatical gender only in **singular** personal pronouns.

80) Spanish nouns that refer to males **end in-o**. & females **end in -a**.

81) **Spelling impairment** can affect both reading and writing.

82) **Traditional grammars** refer to grammatical forms as "parts of speech."

83) Experimental tests of the Whorf hypothesis fall into **two groups**: those that examine the lexical level and those test the grammatical level.

84) The term "**phonological dyslexia**" refers to a symptom pattern of difficulty with decoding and connecting sounds **to symbols**.

85) The relationship between **frequency and length** is captured in what is called **Zipf 's law.**

86) At the **lexical** level, much work has been done on **words for color**.

87) A concept that has figured in much of the research on color cognition is **codability**.

88) In **English,** the system of naming numbers is relatively **complex**.

89) **Asian languages** such as Chinese are **more regular**.

90) Compared to English, **Korean** uses fewer nouns and permits noun ellipsis.

91) **Chinese** does not have a specific form, such as the subjunctive, to express a counterfactual meaning.

92) Count nouns refer to **objects**, while **mass nouns** refer to **substances**.

93) The Korean learners, in contrast **to English** distinguished between tight and loose containment.

94) **Split-brain** is a term to describe the result when the Corpus Callosum connecting the **two hemispheres** of the brain is severed to some degree.

95) In English, there is a distinction between what Whorf called individual nouns (more commonly called count nouns) and **mass nouns**.

96) **Linguistic determinism** refers to the notion that a language determines certain nonlinguistic cognitive processes.

97) linguistic determinism and relativity **were valid** concepts. They can be broadly organized into lexical and **grammatical** examples.

98) **Language politics** is the way language and linguistic differences between peoples are dealt with in the political arena.

99) **Intrinsic motivation** refers to L2 learners' desire to either integrate with the L2 culture or attain their personal goals utilizing L2.

100) There are **two main approaches** to teaching young students how to read.

101) Research on the **neurobiology** of affect highlights the roles of the function of **Amygdala** in language learning and Sustained Deep learning as the key determinants.

102) Cultural learning is also called **cultural transmission/ enculturation**.

103) The English language has the **subjunctive** mood.

104) Broca's aphasia is impairment of the **Left frontal** hemisphere.

105) Every language has a **small** number of basic color terms.

106) Whorf hypothesis has **two** parts.

107) According to Lenneberg, bilingual language acquisition can only happen during the critical period **(age 2 to puberty**).

108) the simultaneous presentation of different stimuli to the two ears IS KNOWN AS **Dichotic listening task.**

109) The **Direct method** in L1 did not take well in public education.

110) Thought is supposed to be **language-specific** and not universal.

111) The **language system,** with its **rule or vocabulary**, is necessary for **thought**.

112) Thought was derived from **speech production**.

113) variables related to mind and psychology are **cognitive** variable.

114) A **third major type** of aphasia is conduction aphasia, which is a disturbance of **repetition**.

115) some scholars view the emergence of language as the consequence of some kind of **social transformation.**

116) The Cromwell's revolution occurred in **1650**.

117) Whatever we say we say that to **communicate** Something.

118) The Whorf hypothesis was proposed by **Edward Sapir** and Benjamin Whorf.

119) The most popular measurement of personality characteristics is the **Myers-Briggs Type Indicator**.

120) Aphasia following traumatic events is **non-progressive** in contrast to aphasia arising from brain tumor, some types of infection, or language disturbances.

121) children acquire a second language quicker than adults this is known as **Proficiency differences**.

122) **Avoidance strategies** involve learning a **mass unfinished** because of language difficulties.

123) Larson and smallest describe culture as a **blueprint** that "guides the behavior of people in community.

124) **Complex Systems Theory** (CST)

125) **Neurolinguistics** and Disorders: Disorder of **Syntax.**

126) There are **two** sides of affectivity. Intrinsic and **EXTRINSIC**.

127) A sequence of paragraphs can make a **story**.

128) The purpose of **word Familiarization** phase is to acquiring children with the shapes of written words.

129) The whole word proponent advocates that the focus be on **meaning**.

130) In language production, language choice is essentially a **top-down process**.

131) **multilingual processing** can be defined as the intersection or shared interest across psycholinguistics and AL.

132) **Intercultural Competence** Means the ability to effectively interact in an intercultural situation or context.

133) The learner desire to communicate with a valued L2 group is called **integrative motivation**.

134) Children having **no speech production** can comprehend and think.

135) Meaning and thought occur without **behavior.**

136) Chinese were not as able as English speakers to think hypothetically about what is not true because of certain grammatical features of the Chinese language. Is '**counterfactuals.**

137) Broca's aphasia is also known as (**telegraphic speech**).

138) Intelligent animal behavior occurs without **language.**

139) Pictograms and ideograms are **iconic symbols** still used in many societies today, both **literate and illiterate**.

140) Language **switching** can be a communicative tool to highlight specific information or express an attitude towards a topic of conversation.

141) **Agrammatic** patients frequently **omit closed-class words.**

142) agrammatic aphasia is a **production deficit** and Wernicke's a comprehension deficit.

143) Pre- production or the first sound: This stage can be called the **silent period.**

144) Babbling or early production: This period starts around from **six months to eight**.

145) First word or speech emergent: This period **lasts from nine months to eighteen months.**

146) The two word or beginning fluency: This period usually starts **from eighteen months to twenty four months.**

147) **Feral children** are those who have grown up in **the wild**.

148) From telegraph to infinity (intermediate fluency and advanced fluency): This period usually starts from **twenty-four months to infinity.**

149) One rare form of aphasia is called **pure word deafness**.

150) Piaget supports the child's **logical thinking** which is attributable to his **third stage** of development called "concerned operational period"
