ENG512

By niMma mAlik

Finals 2K25

Abbreviations:

integrated content-based instruction **(ICB)**

CLIL (Content and Language Integrated Learning)

EMILE (Enseignement de Matières par l'Intégration d'une Langue Étrangère)

CS [code-switching]

BICS (Basic Interpersonal Communication skill)

Reversing Language Shift (**RLS)**

Graded Intergenerational Disruption Scale (**GIDS**)

(CALP) Cognitive Academic Language Proficiency

MT – Mother Tongue

ESL – English as a Second Language

UNESCO – United Nations Educational, Scientific and Cultural Organization

EFL – English as a Foreign Language

IRE – Initiation–Response–Evaluation

AAEL – Afro-American English Language

HL – Heritage Language

LP – Language Planning

EU – European Union (implied in Erasmus context)

EAL – English as an Additional Language

NGO – Non-Governmental Organization

IMP MCQs

1) Bilingual skills depend upon language **ability**.

2) Mother tongue has been equalized with vernacular by **UN**.

3) A person for whom competence in one language is superior to that in the other can be called as **dominant** bilingual.

4) The skill of using language refers to the **performance** in language.

5) Charter for regional and minority languages was in the spirit for **Inequality**.

6) **More prestige to English** is the status of language ideology in Pakistan.

7) A language that is spoken by ethnic communities is called the **heritage** language.

8) language policies are Dictated **from top down.**

9) **Concentric circles model** has been proposed by **Kachru.**

10) If language development is not a choice, it is **obligatory**.

11) Adult bilingualism supports to learn **later** in life.

12) Early vs. late immersion programs in Canada have given **mixed** results.

13) Learning of another language by unlearning of first language is the characteristic of **subtractive bilingualism**.

14) The dynamic bilingualism deals with a learner's mind as a **tool kit.**

15) **Children** can acquire an additional language unconsciously without even thinking about it.

16) **School** is the example of formal learning context.

17) **Multilingualism** is not the name of model of bilingualism.

Nimma Malik

18) Language revitalization is a **gradual** process.

19) Additive bilingualism means **two linguistic repertoires** together.

20) **Higher expectations** are NOT true for a child's bilingual development.

21) **Local institution** is NOT one of the actors in language planning.

22) Language shift ultimately causes language **death**.

23) The acronym GIDS stands for **Graded Intergenerational Disrupted Scale**.

24) When the mother tongue is standardized, it is announced as an **official** language.

25) **Pragmatic** concerns should be encouraged to access multiple linguistic and cultural resources.

26) Additive bilingualism means **two monolinguals and linguistic repertoire** together.

27) Oracy include **listening and speaking**.

28) **Urdu** is the symbol for national identity in Pakistan.

29) Semilingualism refers to the **unequal** performance of bilingual children in two languages.

30) **Children** acquire an additional language unconsciously without even thinking about it.

31) **Cognitive Academic Language Proficiency (CALP)**

32) In language learning habit formation is a process in **Behaviorism**.

33) As we translange, we **Maximize** Support system.

34) students work side by side in different languages, through **computer-assisted instruction**.

35) - IN Co-languaging, where the content is presented to different language groups through **facilitative-power point**.

36) Which of the following is not a part of curriculum arrangement developed by Cen William **Listening**.

37) According to Baker (2001), translanguaging, developed specifically as a curriculum arrangement by Cen Williams in Wales, **involves the hearing, signing, or reading, development of the work (the oral discussion, the writing of passages, the development of projects and experiments) in another language**.

38) European commission presented Erasmus in **1987**.

39) Equity of time means equal distribution of instructional **time among languages**.

40) which of the following is not in adults' bilingual development? **simple communication**.

41) When monoglossic ideologies persist, monolingualism and monolingual schools are the **norm**.

42) Early scholars of bilingualism, in particular Bloomfield (1933), only considered **native-like control** of two languages as a sign of bilingualism.

43) Every language community must become aware of its position in a dynamic world system of language due to **globalization**.

44) In **Singapore country** ethnic language are considered as home languages.

45) **Greek- Latin languages** were taught in 4000 to 5000 ages.

46) Banning of sign language in **1880**.

47) **hegemony**" developed **by Antonio Gramsci (**1971).

48) **Co-languaging** is also used when the history teacher shows a video document in one and subtitle in another.

49) **Social justice** is the most important principle of bilingual education pedagogy.

50) Language codes are **Fluid and complex**.

51) Cummins tells us, **social interaction and the contextualization** of academic language practices is most essential.

52) Linguistic hierarchies are imposed in **Linguicism**.

Nimma Malik

53) Technology-enabled communication facilitates **complex** languaging practices that question monolingual realities.

54) Code- switching response to **external cues**.

55) Erasumus programmes introduced in **1987**.

56) **No age-related** is Not true for adult bilingualism.

57) the time allotment for the language might have completely **flip-flopped**.

58) 100 percent use of children second language at time beginning of instruction in **Immersion bilingual education**.

59) Co language the medium of instruction can be decided by **Official** language.

60) Translation means to use exactly the same **Vocabulary** of the language that convey.

61) Purpose of translanguaging is **Understanding**.

62) CS stands for **(Code Switching).**

63) n an autonomous region of **Italy**, bilingual education for all was introduced at kindergarten in **1983**, at primary school in **1988**.

64) In a fifth-grade dual-language classroom in the United States, the children learn social studies in **Spanish** and although the New York State test is offered in **both English and Spanish.**

65) **Co-languaging** is also used when the history teacher shows a video document in one and subtitle in another.

66) **Social justice** is important principle for equity between languages and cultural background to be recognized as knower.

67) **Immersion bilingualism** began with 100% use of majority majority **child's second language**.

68) In philipines the gist of the lesson in **Filipino or ENGLISH**.

69) Standardization is not an **inherent** characteristic of language, but the result of a **deliberate process**.

Nimma Malik

70) Code switching can be a resource to solve problems but the teacher must monitor the..... **Quantity and Quality**.

71) **subtractive bilingual framework** is used in flexible convergent teaching.

72) In US **Heritage Language** becoming popular with the demonizing of the term 'bilingual'.

73) bilinguals have a high degree of **cognitive control** over various languages simultaneously.

74) At **2-year age** bilingual children can choose to speak one language or the other.

75) Bilingualism as a reaction to immersion program.

76) **Additive Bilingual** theoretical framework is used in immersion model.

77) Bilingual children tend to have **more/high** metalinguistic skills.

78) transnationalization means belonging to different **Nationalities**.

79) Bilingual **secondary** schools most often use Subject-determined arrangement.

80) Code-switching is a **scaffolding** technique in bilingual classrooms/Pedagogy.

81) flexible bilingual arrangements use different **shifts.**

82) code switching is **bad planned/Discouraged** In flexible multiplicity.

83) **Surface understanding** is not an advantage of translanguaging.

84) translanguaging takes place across **cultures**.

85) Mostly invisible bilingualism is observed in **Private Schools**.

86) Translanguaging happens through language **Sharing**.

87) Translanguaging is thus the only **discursive practice** that can include all family members.

88) Scholars nowadays prefer the term **"transference"** to refer to **language contact** phenomena at all linguistic levels.

89) monolinguals are often **oblivious**.

90) Translation of classical texts into **vernaculars**.

91) **Bilingualism** discuss the fluences and changes occurring in the use of two languages.

92) The **higher the score** the **more language shift**.

93) Language shift ultimately shift to the **Death**.

94) Place-determined separation used in the **European classrooms**.

95) Most often, place-determined separation is done in conjunction with an arrangement that is **teacher-determined**.

96) The cognitive approach emerged in the **1980s**.

97) when you teach according to the cognitive approach your focus is on **strategies**.

98) Which of the following is not true for social justice?

Language tolerance Equity **Group work** assessment

99) equal cultural and linguistic space for all relates to social Justice

100) the concept of language dominance as determined by **speed tests is irrelevant .**

101) Language dominance is **task-specific**.

102) language dominance is a **Sociological issue**.

103) **subtractive bilingualism** can cause the language **death**.

104) In **1500 BC** bilingual education spread throughout the **ancient world.**

105) revitalization moves towards the **New** use of the language.

106) **French** language is used for writing in Mali education system.

107) which of the following is **NOT true** for too much code switching?

disengaging the learner confusing the terms delaying in learning

over lay on one language

108) translanguaging is about **bending** and **blending**.

109) the focus of grammar approach is an ----- ?

grammar teaching grammatical structures explicit instruction **all the given options**

110) usually, bilingual programs are designed in a way that they have **90:10** ratio of languages.

111) Semilingualism is a **Monolingual Norm**.

112) Creoles are said to be lexically and structurally **complex**, and are learned as first languages.

113) CBIC stand for **Content** based lang learning.

114) to show a video documentary in one lang with subtitles in other lang is an example of **Co-languaging**.

115) translanguaging can be **Gist of speech**.

116) IRE stand for **Initiation response evalution**.

117) It has been noticed that over almost 3 generations lang shift is observed in **Immigrant** Communities.

118) bilingual education programs which build on translanguaging practices ensure the **functional** interrelationship of the languages used in school.

119) **Convergent** model is used in flexible convergent teaching.

120) **conditional** knowledge tells us ‘When' and 'where' to apply the knowledge.

121) most importantly, we need deciding about the suitability of the switching method in a classrom by looking at **Learners’** Needs.

122) in bilingualism education a part of the curriculum is reserved for bringing two langs together for **Contrastive.**

123) the most prevalent bilingual practice in the bilingual education classrooms is that of **translanguaging**.

124) language use in two-way bilingual classrooms has been referred to as **transdiglossic**.

125) **In Transmission pedagogy** students are perceived as **empty vessels or buckets.**

Subjective

Difference between learning and Acquisition

Learning:

Learning refers to the process of acquiring knowledge or skills **through experience, study, or instruction**. It often involves a conscious effort and can be assessed through tests or performance.

Example:

A student learning French in a language class.

Acquisition:

Acquisition is a more **natural, subconscious process** of gaining knowledge or skills, often through exposure and interaction rather than formal instruction. This term is frequently used in language development.

Example:

A child learning to speak their first language.

Corpus Planning?

Changing the form of the language itself through standardization (standardizing language forms), graphization (developing a writing system), modernization (coining new words and terms). Corpus planning creates new words, expressions or changes old ones to have a new meaning. Corpus planning is involved with creating standards for a language, such as spelling and grammar, or to create dictionaries. Linguistic purity is about avoiding foreign influences to a language because they are seen as bad. It also belongs to corpus planning.

Three Characteristics of multilingualism?

Multilingualism is the ability of an individual or a community to **use more than two languages** proficiently.

1) Multiple Language Proficiency.
2) Enhanced Cognitive and Social Skills
3) Influenced by Social and Political Factors
4) Code-Switching and Code-Mixing

2 kindergarten country?

1) Germany – Origin of Kindergarten
2) United States – Early Expansion & Popularization
3) Japan – Early Asian Adopter

Attitude of local Languages at workplace?

The attitude toward local languages at the workplace is generally **less favorable**, especially in formal and official settings. **English** is often preferred for professional communication, documentation, and career advancement, as it holds higher **prestige** and is associated with modernity and education.

However, **local languages** like Urdu, Punjabi, Pashto, etc., are commonly used in **informal** conversations, peer interactions, and **relationship-building** at work. This creates a context where code-switching is frequent, but the use of local languages is still **seen as informal or low-status** in many workplaces.

place-determined?

Language choice is often place-determined, meaning that speakers use particular languages depending on where they are and what the situation demands. Place determined means **language choice depends on location**, such as using one language at home and another in formal settings.

People **use different languages in different places** — for example:

- **Home** → local or mother tongue
- **School/Work** → national or official language
- **Government offices** → English or standard national language

Should Language Policy Be Adopted in Bilingual Teaching?

Yes, a language policy should definitely be adopted in bilingual teaching. It provides a **clear framework** for how both languages will be used in instruction, assessment, and classroom

interaction. A well-defined language policy ensures **balanced exposure**, **equal respect**, and **effective learning** in both languages.

Why flexible convergent bilingual teaching is important? OR Characteristics of convergent bilingual teaching

convergent bilingual teaching is the use of the two languages concurrently in ways that subordinate one language to the other following a flexible convergent arrangement. The teacher's intent is always to develop a language of power or to make content in the majority language understood. Thus, when the minority language is used, its only purpose is to support instruction in the majority language.

Its Importance:

1) Promotes Understanding
2) Reduces Learning Barriers
3) Encourages Language Transfer
4) Supports Gradual Language Shift
5) Culturally Inclusive

Monitoring quantity and quality of code switching?

Responsible code-switching means using **two or more languages** in a conversation or classroom **with a clear purpose**, rather than randomly or out of confusion.

Responsible code-switching means to carefully control the quantity and quality of switching between languages in the classroom so as to serve the objective of the lesson. Van der Walt, Mabule, and De Beer (2001) caution, however, that teachers must monitor both the quantity and the quality of their code-switching. **In terms of quantity**, the main part of classroom instruction needs to take place in the language being developed. **As to quality**, teachers should code-switch to offer meaningful instructional support and not merely to give orders, instructions, call attention, discipline, or follow the language input of the child. That is, code-switching cannot be simply random.

O'Neill and Velasco (2007) give three ways in which code-switching to the child's home language could be a useful and responsible pedagogical technique: when providing the definition of a word; when providing a linguistic summary; when providing a summary of a lesson in one language so that the child can derive more meaning, as well as focus on the language structures.

write an explanatory note with examples on pidgin and creole?

Pidgin:

A pidgin is a **simplified language** that develops as a means of communication between speakers of different native languages who need to interact, often for **trade, labor, or colonization**. It has **no native speakers** and usually arises in **contact situations** where no common language exists.

Example:

Tok Pisin (originally a pidgin in Papua New Guinea)

Creole:

A creole is a **fully developed language** that evolves from a pidgin when it becomes nativized — that is, when children start learning it as their first language. Creoles have **complete grammar, vocabulary**, and are used for all communication purposes.

Example:

Haitian Creole (based on French)

Recursive bilingualism?

Recursive bilingualism refers to a process where ancestral or heritage languages are reintroduced or learned again by a new generation after they had been lost or suppressed in the family or community. It is often part of **language revitalization** efforts. It is **not linear** bilingual development; instead, it is a cyclical or returning process. It usually occurs in communities where the **first language was replaced or suppressed**

Example:

- Maori language revival in New Zealand
- Hebrew revitalization in modern Israel
- Native American tribes in the U.S.

Explain GIDS?

In Fishman's **Graded Intergenerational Disruption Scale (GIDS)** (1991), the higher the score, the lower the language maintenance prospects of a group. The GIDS provides a way by which ethnolinguistic groups can assess the threatened state of their languages (X) and mobilize resources on their behalf;

Stage 8: X spoken by socially isolated old folks;

Stage 7: X spoken by socially integrated and ethno-linguistically active, but beyond child-bearing age;

Stage 6: X is normal language of informal spoken interaction between and within all three generations of family, with Y reserved for greater formality and technicality than those common in daily family life;

Stage 5: X is also used for literacy in home, school, and community, but such literacy is not reinforced extra-communally.

Stage 4: X is used in lower education that meets requirements of compulsory education laws;

Stage 3: X is used in lower work sphere, outside of the community, and involving interaction between both speech communities;

Stage 2: X is used in lower governmental services and mass media, but not higher levels;

Stage 1: X is used in higher level educational, occupational, governmental, and media efforts.

Goals of ager 2001 OR What is language policy goals?

Ager (2001) discusses seven goals of language policy:

1) **Identity:**

Identity, as when states impose certain languages as a link to specific identities. For example, France has maintained that it is a perfect hexagon and that only French is tied to French identity, thus silencing, until very recently, the other languages of France – Basque, Breton, Catalan, Corsican, Flemish, German, and Occitan.

2) **Ideology:**

Ideology, as when states or groups impose different languages or standards as a result of an ideology. An example is the United States' recent federal law, No Child Left Behind, mandating students' annual progress reports that are based on written Standard English assessments (Menken, 2005, 2008).

3) **Image creation:**

Image creation, as when states try to ensure that a favorable view is taken of their history and language by projecting its language. It is well known, for example, that the British Council and the U.S. government have supported the greater use of English in international communication (Phillipson, 1992).

4) **Insecurity:**

Insecurity, as when states or groups are wary of others and their languages.

5) Inequality:

Inequality, as when states or groups act on language in order to correct inequalities in society. This is the case, for example, of non-sexist language that came to be used especially during the 1970s and 1980s

6) Integration with a group:

Integration with a group. This was the case when, for example, in Wales, fol- lowing the Education Act of 1870, Welsh children were not only required to learn English in school, but prohibited from speaking Welsh.

7) Instrumental motives:

Instrumental motives, as when groups or individuals acquire a second language because it will give them advantages, usually economic ones, in the market or in careers. This is the case especially of English throughout the world.

Explain language ideology?

Language and sociopolitical systems:

1) Represent systematic patterns of behavior related to linguistic
2) Attitudes
3) Beliefs
4) Values
5) Social systems of domination - power differential
6) Subordination of groups access to resources
7) Positive or negative self-image
8) Language and symbolic capital (Bourdieu, 1991)
9) The role of schools in symbolic violence - the concept of being naturally superior
10) Produced by what people say or not say, do or not do through language they know (Blommaert, 1999)

Research focuses on:

- Sociohistorical, sociocultural and socioeconomic context
- Production of meaning through language choice and discourse
- Access to linguistic resources and identity construction

UNESCO 1953?

In 1953, UNESCO, responding to the educational failure of children in colonial situations, issued an important resolution declaring that it was axiomatic that a child be taught to read in their

home language. Based on this principle, efforts to use the children's language in education, especially in the early grades, gained strength, leading to the first official uses of what has since been termed "transitional bilingual education," that is, the use of the child's heritage language in the early grades and only until the child is fluent in the majority or colonial language.

Note on invisible Bilingualism?

Invisible bilingualism refers to a situation where a person **knows and uses two languages**, but their bilingual ability is **not recognized or acknowledged** — either by society, institutions, or even themselves.

This can happen when:

- A language is considered **low-status**, **non-standard**, or **informal**.
- The speaker only uses the second language in **limited or private domains**.
- Bilingualism is **not visible in formal settings** like school or work.

Example:

A student in Pakistan who speaks Pashto at home and Urdu at school, but whose Pashto skills are never measured or acknowledged in exams or school records.

Write a note on Micro and macro alteration?

Duverger (2005) explains the difference between micro-alternation and macro-alternation in bilingual education.

Macro-alternation means teaching certain lessons or courses mainly in one language, making it clear which language is being used. The other language might be used occasionally for extra information or to expand on a topic, but its use is limited and controlled by the teacher. This approach highlights the bilingual nature of the program.

Micro-alternation happens when a lesson, mostly taught in one language, includes small elements of the other language, like code-switching in bilingual communities. Though traditionally frowned upon in language teaching, controlled micro-alternation can make students feel more comfortable and less pressured to use only one "pure" language, preventing them from staying silent. Duverger notes that macro-alternation is structured and formal, while micro-alternation is flexible and efficient. Combining both creates a balanced and effective approach.

- Macro-alternation is **planned and official**.
- Micro-alternation is **more flexible and natural**.
- A **mix of both** can make bilingual teaching more **effective and realistic**.

Advantages of translanguaging by Cen William?

Cen Williams sees four advantages to translanguaging.

Four Benefits:

1) Development of competence in the weaker language

- Maximizing learning opportunities with scaffolding
- Transitions to build confidence and reduce anxiety

2) Deeper understanding of the subject matter

- Space for learner agency or co- construction of knowledge
- Building on existing knowledge

3) Home-school cooperation

- Maximizing support systems
- Increasing relevance

4) Integration of fluent speakers with early language learners

- Developing communities of learning — supporting each other
- Both languages encouraged

Explain Three Components of language policy?

Three components (Spolsky, 2004):

1) Language management
2) Language practices
3) Language beliefs and ideology

Language management:

- Language planning
- Language intervention
- Efforts to manipulate language

Language practices:

- Habitual pattern of selecting among language varieties
- Ethnography of speaking (Hymes, 1967).

Language beliefs:

pg. 17

- About language
- About language use
- Ideologies

Difference between preview and view?

A teaching method, where different languages are used at different stages of a lesson is called convergent multiple arrangements. This method is commonly used at the secondary school level around the world. In this approach, the teacher may begin by giving a **preview or introduction** of the lesson in the **students' home language** to help them understand the topic. The main lesson is then **taught in a second language** (often an official or academic language), and finally, the lesson is **reviewed** in a language that students can understand well. Sometimes this order is reversed—especially when students are new to learning a second language. In such cases, the teacher might **preview the lesson in the second language** to introduce key subject-related vocabulary, then **teach in the home language**, and finally **review in the second language**. This method is helpful because it builds both subject knowledge and language skills, especially important for students in bilingual education.

Key components that are needed in study language maintenance or shift?

Language maintenance and language shift are processes that describe how a language is either preserved or replaced within a community. Language shift or maintenance does not happen in a vacuum, it occurs only when certain societal conditions are present:

1) Co-existence of more than one language – bilingualism;

2) Differences in power, value, and status conferred on each of the two languages that lead the group to maintain or abandon the home language;

3) Pressure in political, economic, or social forms from one of the two language groups.

What is the Role of language academies in language construction?

Language academies are official institutions that play a **central role in constructing, regulating, and standardizing a language**. Their main goal is to **develop and protect** the structure, use, and status of a language — especially in national, educational, and literary contexts.

Language academies are pivotal in language construction by standardizing, modernizing, and promoting languages while preserving their cultural heritage. They provide the frameworks, vocabularies, and resources needed for effective language use in education and society. In bilingual education, their work supports structured (macro-alternation) and flexible (micro-

alternation) language use, ensuring languages remain vibrant and relevant, especially for emergent bilinguals learning specialized content.

What is Transformative pedagogy?

Transformative pedagogy is a teaching approach that aims not only to transfer knowledge but also to change students' thinking, behavior, and social awareness. It focuses on **empowering learners**, promoting **critical thinking**, and encouraging **social justice and equity**, especially in **multilingual and multicultural classrooms**. It supports language maintenance by valuing students' home languages and cultures while facilitating second-language acquisition to navigate broader societal contexts. Transformative pedagogy is not just about transmitting knowledge; it seeks to engage students in a way that inspires critical thought and action, ultimately leading to personal growth and societal transformation.

Name two situation that include translanguaging?

Translanguaging refers to the **flexible use of multiple languages** by bilingual or multilingual speakers to communicate, learn, and make meaning. It is not simply code-switching — it's about using all available language resources in a natural and dynamic way.

1) Bilingual Classroom Discussions
2) Community or Family Interactions
3) Parent-Teacher Conferences in Bilingual Communities
4) Collaborative Group Work in Multilingual Settings

How can we build plurilingual abilities?

Use of multiple languages for different functions is called Plurilingualism.

We can build **plurilingual abilities** by allowing students to use **all the languages they know** while learning. Teachers can let students speak, write, or think in their **home language** as well as the **second language** in the classroom. This helps them understand better and feel confident. Teachers can also help students **compare words and grammar** from different languages, which makes learning easier. Using **books, videos, or songs** from different cultures also supports plurilingualism. Giving students real chances to **use their languages** in group work, projects, or daily talk helps them become better at switching between languages. When teachers are trained to support multiple languages, students feel more valued and learn better.

Define Semilingualism?

the unequal performance of bilingual children in their two languages when compared to monolingual children is called Semilingualism. **Semilingualism** refers to a condition where a person has **incomplete or limited proficiency in both languages** they speak.

Characteristics of Semilingualism:

pg. 19

- Limited Vocabulary
- Inconsistent Language Use
- Incomplete Grammar Proficiency
- Context-Dependent Skills

Semilingualism is based on the concept of monolingualism. Note

Semilingualism is a concept that assumes language proficiency should match that of a native monolingual speaker. It refers to a situation where a bilingual person has **limited skills in both languages**, especially in areas like vocabulary, grammar, and fluency.

This idea is based on the concept of monolingualism, meaning that it **judges bilinguals by monolingual standards**. If bilinguals do not perform like fluent monolinguals in either of their languages, they are labeled **semilingual**. However, this view is now **criticized** because it does not recognize how bilinguals often use both languages together in flexible and functional **ways** (like in translanguaging or plurilingualism).

Significance of cross linguistic awareness?

Cross-linguistic awareness means knowing how **different languages work**, and being able to **compare** them. It is the ability to **notice similarities and differences** between languages — in grammar, words, sounds, and meanings.

Significance:

1) Creates linguistic tolerance towards different varieties
2) Acknowledges the value of languages not used in classrooms
3) Creates metalinguistic awareness
4) Develops association between learners and | the languages learnt
5) Creates understanding of the commonalities between languages
6) Clarifies difference between them
7) Reaches beyond the languages of instruction
8) Discusses languaging patterns in classroom and community
9) De-pathologizes home cultures

In random code-switching what is concurrent translation?

In the context of random code-switching, concurrent translation refers to when a speaker spontaneously **switches between two languages** during speech and translates or repeats a message in another language immediately to ensure understanding by all listeners.

This form of translation happens in real time, often without planning, and is used naturally in bilingual classrooms or informal discussions where participants may not all fully understand one language.

✅ **Example:**

A teacher says in English:

"The water cycle begins with evaporation — paani uth kar asmaan mein jata hai." (Translation into Urdu right after the English sentence — spontaneous and unplanned.)

This immediate **dual-language explanation** is a form of **concurrent translation** happening within random code-switching.

According to Baker (2001) difference between translanguaging and codeswitching?

According to Baker (2001):

- **Code-switching** is when a bilingual speaker **switches between two languages**, usually at sentence or phrase level, often to fit the situation, audience, or topic. It reflects a separation of the two languages in the speaker's mind.
- **Translanguaging**, on the other hand, involves using elements of **both languages together as a single, unified system**. It's not just switching, but **mixing and integrating** language resources to make meaning naturally. It reflects a fluid use of the speaker's full linguistic repertoire.

Baker (2001) distinguishes between code-switching, which sees the languages as separate, and translanguaging, which sees them as a unified communication system used for meaning-making.

Why the Minority Language Used at Home Often Differs from the Standard Minority Language Taught in School?

The minority language spoken at home often has little in common with the standardized version taught in schools because of differences in **dialect, vocabulary, grammar, and formality**. At home, the language is usually spoken **informally, shaped by regional influences**, and passed down through oral tradition. In contrast, the version taught in school is often a standardized, formal variety, used in textbooks, exams, and academic settings.

How translanguaging helps in bilingual acquisition?

Translanguaging helps in bilingual learning by allowing students to **use both their languages together**. It means they can **think, speak, or write** using both their home language and the new language they are learning. This makes it easier to **understand difficult ideas**, learn new words, and take part in class without fear. When teachers let students use both languages, it helps them **learn better, feel confident**, and stay connected to their **own culture and identity**. Translanguaging makes learning feel **natural and comfortable**, just like how people use languages in real life.

Elective bilingualism or language by choice or three characteristics of elective bilingualism?

Some individuals choose to develop bilingual abilities, often the result of studying the language in school or through personal effort. That is, their bilingualism is optional. This type of bilingual has been referred to as **"elite bilingual**" by Fishman (1977b) and "**elective bilingual"** by Valdés and Figueroa (1994). In elective bilingualism Bilingual Development may be a choice:

Characteristics:

- ❖ Learnt at schools or language centers
- ❖ Elective or elite bilingualism (Fishman, 1977 b)
- ❖ Formal learning — high status

Which factors scholars keep in mind while development of bilingual education program?

When developing a bilingual education program, scholars consider several important factors to ensure that the program is effective, inclusive, and sustainable.

1) Learners' Language Background
2) Educational Goals
3) Language Status and Function
4) Community Attitudes
5) Availability of Resources
6) Language Policy and Planning
7) Age and Cognitive Development of Learners

Objections on subtractive bilingualism?

Subtractive bilingualism happens when a person learns a **new language** but starts to **lose their first language** while doing so. Instead of becoming strong in both languages, the new language **replaces** the first one. This often happens in schools where only the second language (like English) is used, and the **home language is not supported**.

1) Loss of First Language and Identity
2) Harm to Self-Confidence
3) Risk of Semilingualism
4) Social and Emotional Consequences
5) Loss of Linguistic and Cultural Identity
6) Cognitive and Academic Disadvantages
7) Reinforcement of Monolingual Bias
8) Limited Long-Term Bilingual Benefits

What is the meaning of understanding power dynamics, give examples

Understanding power dynamics means knowing **who has more power or control** in a situation, and how that power affects the way people **speak, act, and interact** with each other. It helps us see **why some voices are heard more** than others, and why some languages, cultures, or people are treated with more respect than others.

✅ **Example:**

- 🏫 **In a Classroom:**

The **teacher has more power** than students. Understanding this helps teachers use their power **fairly**, giving students the chance to speak and feel respected.

Communicative Approach?

Whereas the grammatical approach was based on behavior, the communicative approach is derived from a **constructivist theoretical framework** that suggests that language learning occurs as students draw meaning from experience and interpersonal interaction. The two most important language learning methods under the communicative approach are: **immersion** instruction and integrated content-based instruction **(ICB).**

ICB-key features:

- Adaptation of immersion
- Focus on language and literacy
- Language teachers — rather than content teachers

Immersion methodology became popular as a result of the growth of immersion bilingual education in Canada in order to develop bilingualism in a minority language. Pedagogically, teachers plan content andlanguage objectives concurrently. The method promotes the use of language that is slow and simplified, with guarded vocabulary and short sentences, while the grade level curriculum is used, although modified. Teachers generally use thematic instruction.

Immersion method- key features:

- Meaningful input
- Opportunities for interaction-wait time
- Carefully planned language connected to students' background

Immersion methodology is also used throughout the world for **revitalization of languages** but the immersion instruction method is also used in countries that do not support bilingualism and has become most popular in monolingual instruction for immigrants and refugees, under the label "sheltered instruction."

Factors that affect languaging in 21st century?

1) Globalization
2) digital communication
3) migration
4) educational policies
5) shifting cultural norms
6) all contributing to dynamic and diverse linguistic landscapes.

what is languaging? Write three ways of Languaging.

Languaging means using language to **think, learn, and make meaning**. It is not just speaking or writing — it is how we use language to understand ideas, express thoughts, solve problems, and interact with others. Languaging helps us **learn better** by talking, reflecting, and explaining.

1) Talking to Understand
2) Writing to Think
3) Using language for thinking

How politics influence language policy?

Politics has a strong influence on language policy because governments often decide which languages are given importance in education, media, and official use. Political leaders may choose one language as a **national or official language** to **unite the country**, show **power**, or support a certain group. Sometimes, this means **minority languages are ignored or discouraged**, leading to language loss or inequality. On the other hand, political support can also help promote bilingualism or protect regional languages by including them in schools or giving them legal status. So, language policy is not just about communication — it also reflects power, identity, and control in society.

Define term dialect?

A dialect is a **variety of a language** that is spoken in a **specific region or by a certain group of people**. It includes differences in accent, vocabulary, grammar, and expressions, but it is still a form of the same language.

For linguists, the term “dialect” is a **neutral term** used for variants of a specific language. Romaine (1994) defines dialect as “a subordinate variety of a language,” and refers to regional dialects, associated with a place, social dialects, associated with social class, and historical dialects referring to ancestors of present language varieties. There are also ethnic dialects spoken by ethnolinguistic groups.

Types:

1) **Social Dialect:** The kind of language that upper class people speak

2) **Place Dialect:** Dialect related to ethnicity. People belonging to a certain region and speaking the same language might speak different varieties or different dialects of the same language.

3) **Historical Dialect:** A dialect which has been used in a time which has passed away but over time this dialect is no more in use.

Monoliterate Bilingualism?

Monoliterate bilingualism refers to a form of bilingualism where an individual is orally proficient in two or more languages but literate (able to read and write proficiently) in only one of them.

Example:

A child in Pakistan may **speak both Pashto and Urdu fluently**, but can **only read and write in Urdu**, not in Pashto. This child is **monoliterate bilingual**.

Define translanguaging and write its characteristics?

Translanguaging refers to the process where bilinguals use their full linguistic repertoire to make meaning, learn, and communicate.

Characteristics:

1) Reflects Real-Life Communication
2) Breaks Language Boundaries
3) Promotes Deeper Learning
4) Flexible Language Use

How Skutab-Kangas divide languages on account of linguicism?

The discrimination between language in term of power and the status that goes to its speakers is called linguicism. **Colonization** is the example of linguicism. It is an arbitrary linguistic hierarchy (Imposed hierarchies)

- Language of the powerful
- Language of the majority or the language of the minority elite

According to her, languages are divided based on **how much power and support they receive** in society. This division shows how **some languages are favored** (given high status and used in education, media, and government), while **others are ignored or suppressed**, especially those spoken by minorities.

Pennycook (2002) has also shown how language use in education may create **"docile"** people, able to cooperate in their own exploitation.

Characteristics:

- Discrimination
- Language Hierarchy
- Restricted Opportunities

How older students can make better progress in learning second language?

Older students can make better progress in learning a second language because they already have **strong thinking and learning skills**. They can use their **knowledge of grammar, vocabulary, and study techniques** from their first language to help them understand the second one. Older learners also know how to **organize their learning**, **focus on goals**, and **practice regularly**. They can understand **rules and patterns** better and often have **clear motivation** for learning, such as for jobs, studies, or travel. Even though younger children may have better pronunciation, older students can still **learn faster** and **more effectively** in many areas.

How macro alternation facilitates bilingualism?

Macro-alternation helps in developing bilingualism by giving students the chance to **learn content in both languages** clearly and effectively. In this method, a full lesson or subject is taught in **one language**, and another lesson or unit is taught in the **second language**. This way, students get deep exposure to both languages over time. It allows them to build strong language skills while understanding academic content. Since each language is used in a clear, planned way, learners can **connect vocabulary, concepts, and subject matter** in both languages. Macro-alternation is often used to highlight the **bilingual nature of a program** and gives learners a structured way to become confident in **both languages**.

Transformative pedagogy?

Transformative pedagogy is a way of teaching that aims to **change how students think, learn, and act**. It focuses not just on giving knowledge but on helping students become **confident, critical thinkers** who can understand the world around them and make it better. This approach encourages learners to **ask questions, share their ideas, respect different cultures and languages**, and take part in real-life discussions. It is especially helpful in **bilingual and multicultural classrooms**, where students come from different language backgrounds. Teachers using transformative pedagogy support students' **home languages and identities**, making learning more meaningful and inclusive.

What is Globalization?

Globalization means the **growing connection between countries** through trade, travel, technology, education, and communication. It allows people, ideas, goods, and information to **move quickly across the world**. In terms of language, globalization has increased the use of **international languages like English**, especially in business, media, and education. While globalization helps people connect and learn more easily, it can also lead to the **loss of local languages and cultures** if they are not supported. That's why it is important to **balance global** communication with local language preservation.

Five flexible multiple bilingual arrangements?

Five flexible multiple bilingual arrangements can develop the multiplicity of multilingual practices that are important today:

1) Responsible code-switching both ways
2) Preview/view/review
3) Translanguaging
4) Co-languaging
5) Cross-linguistic work and awareness

How Translanguage facilitate bilingualism?

Translanguaging helps in developing bilingualism by allowing students to **use both of their languages together** to learn and communicate. Instead of keeping the two languages separate, students can **move between them freely** to understand lessons, express their ideas, and solve problems. This makes learning easier and more natural. It helps them **build vocabulary, improve understanding**, and feel more confident in both languages. Translanguaging also respects students' **home language and identity**, which supports stronger and more meaningful bilingual development.

Explain subtractive bilingual with respect to Pakistani context?

In Pakistan, subtractive bilingualism happens when students learn a new language like **English or Urdu**, but begin to **lose their mother tongue**, such as Punjabi, Sindhi, Pashto, or Balochi. This often occurs in schools where **only English or Urdu is used**, and regional languages are **ignored or discouraged**. As a result, students may feel that their home language is **less important or not respected**, which can lead to a **loss of cultural identity** and weaker skills in both languages. Instead of adding a second language, subtractive bilingualism **replaces the first language**, which can harm both **language development and self-confidence** in students.

Explain that nonstandard languages are old as language history?

Nonstandard languages (such as regional dialects or informal speech forms) are **just as old as language itself**. Before any language was made "standard," people spoke in many **local and natural ways**. These nonstandard forms are not incorrect — they are simply **different versions**

pg. 27

of a language that come from **history, culture, and community use**. Standard languages were created **later**, often for **education, government, or official purposes**. But nonstandard varieties have always existed and continue to show the **richness and diversity** of human language across time.

Flexible convergence two patterns?

1) Random code-switching
2) Monoliterate bilingualism

Flexible bilingualism?

Flexible bilingualism means allowing students to **use both of their languages freely** in the classroom to help them learn better. Instead of keeping the two languages separate, teachers support students in **using whichever language helps them understand the lesson**. For example, a student might read in English but explain the idea in Urdu or their home language. This flexible approach helps students feel more **confident**, supports **clear understanding**, and respects their **cultural and language background**. It is especially helpful in classrooms where students come from different language groups.

Phonological language borrowing?

Phonological language borrowing occurs when a language adopts sounds or phonological rules from another language. This usually occurs when people **borrow words** from a foreign language but **pronounce them using the sound system** of their own language.

Example:

- In Urdu, the English word **"school"** is often pronounced as **"iskool"**, adding a vowel sound at the beginning — this is a **phonological change** based on Urdu's sound rules.

Multiple bilingualism?

Multiple bilingualisms mean learning and using more than two languages in a proper and planned way. In this system, students learn some subjects in one language and other subjects in another. The goal is to make students good at all the languages they know. It also helps them understand how languages are similar or different. Sometimes, students can discuss or do group work in any language they are comfortable with. This way, they become confident in using different languages and improve their thinking and learning skills.

Constructive language?

Constructive language refers to the use of words and phrases that build up, support, and promote positive communication. It's about framing messages in a way that's helpful, respectful, and solution-focused.

Constructive language can:

- Encourage collaboration
- Foster understanding
- Promote problem-solving
- Build trust

Elements of sign languages?

Sign languages are full and natural languages used by deaf or hard-of-hearing people. The main elements of sign languages include:

- Hand shapes
- Movements
- Locations
- Palm orientation
- Facial expressions
- Body posture

Explain Language policy?

Language policy means the rules, plans, or decisions made by a country, government, or institution about how languages should be used. Language policies are often embedded in constitutions, laws, regulations and rules. These policies may affect language status, corpus, or acquisition. They can promote one language over others, support linguistic minorities, or impose language restrictions.

It can be:

- Planned and unplanned
- **Dictated** from **top down**
- **Interpreted** from **bottom up**
- Interactive not linear

Three dimensions of LP enterprise:

1) Corpus planning
2) Status planning
3) Acquisition planning

1) Corpus planning:

- Changing the form of language
- Standardizing language forms
- Graphization – writing
- Modernization - adding vocabulary or changing it

2) Status planning:

pg. 29

- Modifying the status or prestige
- Ascribing functions in the working of the government
- Institutional work
- Education

Different actors in language planning:

- Individuals-Hebrew
- Government
- Communities and non-government organizations
- Other international institution

3) Acquisition planning:

- Developing learning opportunities
- Universities and schools
- Other opportunities

Dynamic bilingualism and Respective bilingualism?

Dynamic bilingualism means that bilingualism is not just a straight or simple process. It changes and grows depending on the situation and how people use language in real life. In today's world, people often use many languages at the same time and in many ways — like speaking, writing, texting, using pictures, videos, or sounds. Because of this, people don't always follow old patterns of language use. Instead, they mix and shift between languages depending on what they need. This flexible and changing way of using language is called **dynamic bilingualism**, and it is similar to **plurilingualism**, where people use parts of different languages together.

Respective bilingualism means when a person learns one language **first**, and then learns the **second language later**. It is a more **step-by-step** or **linear** process. The two languages are often kept **separate**, and used in **different situations** or with different people.

Child who learns the first language in bilingualism?

In bilingualism, a child may grow up learning **two languages** from an early age. The **first language (L1)** is usually the **mother tongue** or the language spoken at home. This language is often learned naturally through **listening, speaking, and interaction** with parents and family. If the child learns both languages from birth, it's called **simultaneous bilingualism**. If the child learns the second language **after** the first (for example, at school), it's called **sequential or respective bilingualism**. The first language plays a big role in building the child's **thinking, emotions, and cultural identity**. A strong first language also helps in learning other languages later.

CLIL and EMILE?

CLIL (Content and Language Integrated Learning) and **EMILE** (Enseignement de Matières par l'Intégration d'une Langue Étrangère) are teaching methods where students learn both a subject and a new language at the same time. In this approach, a subject like science, history, or mathematics is taught using a foreign or second language, such as English. This helps students develop their language skills naturally while understanding the subject content. CLIL is widely used in European countries, while EMILE is the French name for the same method. Both methods support bilingual education and encourage students to use language in real, meaningful ways. These approaches are especially helpful in multilingual classrooms and promote better learning and communication skills.

Intentionality model of language acquisition?

The **Intentionality Model** says that children learn language **because they want to communicate and express their thoughts**. Language learning is not just copying words; it comes from the child's **intentions**, **goals**, and **desire to interact** with others. As children grow, they combine their thinking, emotions, and social needs to produce language. This model focuses on the idea that **language, emotion, and cognition** all develop **together**, and children **actively take part** in learning, not passively receiving information.

why metalinguistic awareness of bilinguals are more than monolinguals?

Metalinguistic awareness means being able to **think about language**, notice how it works, and play with its rules. **Bilinguals** often have **more metalinguistic awareness** than monolinguals because they are used to **switching between two languages**, comparing them, and choosing which language fits the situation. This daily practice helps bilinguals understand things like grammar, word meanings, and sentence structures better. Since bilinguals are constantly aware that there are **two different systems of language**, they learn to think more deeply about how language works. This skill helps them in reading, writing, problem-solving, and learning new languages too.

Briefly define equity of time?

Equity of time in bilingualism refers to the practice of distributing time equally between two languages in educational settings. t ensures that **no language is favored** or ignored, and **each language gets fair attention** during lessons. This helps students learn both languages equally well and prevents one language from becoming more dominant or powerful than the other.

Why is it important to create awareness of code-switching among teacher education programs?

It is important to create awareness of **code-switching** in teacher education programs because teachers need to understand that switching between languages is a **natural and useful part of bilingual communication**, not a mistake. When teachers know how and why students use code-

switching, they can use it as a **teaching tool** instead of punishing or discouraging it. Code-switching helps students' **express ideas clearly**, build confidence, and make connections between the two languages they know. If teachers are trained to handle code-switching positively, they can create **inclusive classrooms**, respect students' **linguistic backgrounds**, and support better **learning outcomes**.

models of bilingualism?

1) Additive bilingualism
2) Subtractive bilingualism
3) Dynamic bilingualism
4) Recursive bilingualism
5) Plurilingualism

transitional bilingual education?

Transitional Bilingual Education is a teaching method where students **start learning in their first language** (L1) and are slowly **shifted to the second language** (L2), usually the dominant or official language like English. The goal is not to maintain both languages forever, but to **help students move smoothly into the mainstream education system** where only the second language is used. Once students become confident in the second language, the use of the first language is reduced or stopped. This approach is common in places where students speak a minority or home language that is different from the school language.

How languages have acquired a sanctity dimension?

Languages have acquired a **sanctity dimension** because they are often linked to **religion**, **tradition**, and **identity**. People start to see certain languages as **sacred or pure**, especially when they are used in **holy books**, **prayers**, or **religious ceremonies**. For example, Arabic in Islam, Sanskrit in Hinduism, and Latin in Christianity are seen as holy languages. Over time, these languages are treated with **deep respect**, and changing or questioning them is considered **wrong or disrespectful**. This makes the language more than just a way of communication—it becomes a **symbol of spiritual and cultural identity**.

languages have acquired a sanctity dimension for example **Arabic for Muslims**.

Explain development of language AS a choice?

Language development is a process starting early in human life. Infants start without knowing a language, yet by 10 months, babies can distinguish speech sounds and engage in babbling. Some research has shown that the earliest learning begins in utero when the fetus starts to recognize the sounds and speech patterns of its mother's voice and differentiate them from other sounds after birth. Typically, children develop receptive language abilities before their verbal or expressive language develops. Receptive language is the internal processing and understanding of language.

As receptive language continues to increase, expressive language begins to slowly develop. Usually, productive language is considered to begin with a stage of pre-verbal communication in which infants use gestures and vocalizations to make their intents known to others. According to a general principle of development, new forms then take over old functions, so that children learn words to express the same communicative functions they had already expressed by proverbial means.

difference btw adult and child bilingual development?

Child Bilingual	Adult Bilingual
Children usually learn two languages naturally through everyday interaction.	adults often learn a second language in a classroom or formal setting.
Children's use implicit learning	Adults use explicit learning
Communicative needs simpler	Communicative needs complex
Learning better supported with gestures and visuals	Learning less supported -urgency
Expectations from adults different	More language anxiety -motivation
Child's easily able to achieve native competence in accent	Adults may be less able to achieve native competence in accent
Children learn languages by hearing, playing, and talking.	Adults learn languages by studying, practicing, and memorizing.

Development of 2nd language a choice?

In today's globalized world, learning a second language is often a **personal or strategic choice**, not just a requirement. People choose to learn second languages like **English, Arabic, or Chinese** to get better jobs, study abroad, access technology, or improve their social status. This shows that the development of a second language is no longer just about where you live or what your community speaks — it's about **opportunity, mobility, and empowerment**. As globalization connects people from different backgrounds, many learners actively decide to learn a second language to **fit into the modern world** and **compete internationally**. This choice is influenced by **economic, educational, and political needs**, making language learning a **deliberate decision**, not just a natural process.

Three periods of sociohistorical and sociolinguistics bilingualism?

1) 1968
2) 1990
3) 2001

pg. 33

reasons of using standard language in schools?

- To Maintain Educational Standards
- For Access to Higher Education and Jobs
- For National Identity and Unity
- To Create Uniformity
- To Support Communication

Bilingualism and Child's Key Enjoyment?

Bilingualism brings **joy and enjoyment** to children by helping them **express themselves in more than one language**, **connect with different people**, and **understand multiple cultures**. Children often enjoy learning new words, switching between languages during play, and watching cartoons or reading stories in different languages. It makes their learning more **fun, engaging**, and **creative**. Bilingual children also feel **proud** when they can translate for others or talk to relatives in another language. This confidence and sense of ability bring a key source of enjoyment in their language learning journey.

Define cognates?

Cognates are words in **two different languages** that look or sound **similar** and have the **same meaning** because they come from the **same origin** (usually from Latin, Greek, or another old language).

English	Spanish/French	Meaning
Family	Familia (Spanish)	خاندان
Doctor	Docteur (French)	ڈاکٹر

Define the term bilingual?

A **bilingual** is someone who has the ability to **understand and/or use two languages**, either equally or with varying degrees of proficiency.

Example:

Ali speaks Urdu at home and English at school. He is bilingual.

External functions of language behaviour?

External functions of language behavior are the ways we use language to **communicate with others** in the outside world. These functions are **social and practical**—they help us **live, work, and communicate** with others in daily life. Language is not just for thinking (internal), but also for doing things with people.

Methods of Grammatical approach?

1) Grammar translation method
2) Direct method
3) audio lingual method

Two most important language learning methods under the communicative approach?

1) Immersion Instruction
2) Integrated Content-Based Instruction (ICB)

Examples of "co-language" in a classroom setting?

Co-languaging means using both languages simultaneously.

1) **Bilingual PowerPoint Slides (Africa):**

A university in Africa presents content on PowerPoint slides using both Afrikaans and English. Each language appears in a different color on the screen.

2) **Video with Subtitles:**

A history teacher shows a video documentary in one language (e.g., English) with subtitles in another (e.g., Urdu).

3) **Computer-Assisted Instruction in Two Languages:**

Students work side-by-side on computers, each using a different language interface or resources (e.g., one in English, one in Pashto).

4) **Listening to Audiobooks in Two Languages:**

In a primary classroom, students listen to books on tape in two different languages—some in English, others in their home language, or sometimes alternating between the two.

Flexible multiplicity?

Flexible multiplicity is the idea that bilingualism in the 21st century is not just about knowing two separate languages (like 1 + 1 = 2), but about being able to **use both languages flexibly, creatively, and together**. This includes **switching between languages**, **translating**, and **designing information in more than one language**, depending on the context. It challenges the traditional idea that languages should be used separately in classrooms.

In flexible multiplicity, bilingual learners and teachers use their **full language resources** to communicate and learn. This approach supports translanguaging, code-switching, and

plurilingual practices, helping students become skilled in using languages in real-world, dynamic settings.

different types of language arrangements?

three different types of language arrangements:

1) strict separation
2) flexible convergence
3) flexibility multiplicity

Political advantages of mother tongue?

1) **Language Rights as Human Rights:**

Promoting the mother tongue supports **linguistic human rights**. It ensures both **individual** and community rights, especially for minority groups. People have the right to learn and use their home languages in education and daily life, which strengthens political representation and cultural survival.

2) **Political Representation & Equality:**

Using the mother tongue in education and public life can increase **political involvement** and **equality**. It reduces the **power gap** between language majorities and minorities, helping all groups **participate** equally in society.

3) **Cultural and Political Autonomy:**

When communities control their language education (curriculum, schools, materials), it builds **political autonomy**, giving them the right to preserve and promote their language and cultural identity.

4) **Resistance Against Linguistic Imperialism:**

Promoting mother tongue education is a way to resist domination by elite or colonial languages (e.g. English), and instead empower local communities. This strengthens national identity and reduces inequalities in power.

Rules of Language Academies in Language Construction?

1) They create **rules for grammar, spelling, and pronunciation** to promote a uniform version of the language.
2) Academies help **codify** a language through dictionaries and grammar books.
3) They support the **dominance of one language** as the “official” or “national” language, often tied to **political unity**

4) These institutions often **downplay dialectal differences** to create the illusion of a **linguistically homogeneous** nation.

Language standardization?

Language standardization is the process of making one version of a language the **official or accepted form** for speaking, writing, teaching, and public use. This version is given rules for **spelling**, **grammar**, and **pronunciation**, and is used in education, media, and government. It is usually supported by language academies or governments to create **uniformity and national identity**.

Language Hegemony example from daily life experience?

Language hegemony means when **one language becomes dominant** and is treated as more powerful or more valuable than other languages. It happens when **governments, schools, media, and society** give more importance to one language—usually for **economic, political, or educational reasons**—while ignoring or devaluing local or minority languages. This dominance is so strong that people start to **believe** the dominant language is "better" or "more correct."

Example:

A student in Pakistan who speaks **Punjabi** at home may feel **pressured to speak only Urdu or English at school**, because those languages are considered "proper" or "educated." If the teacher discourages speaking Punjabi in class and praises students who speak English, it creates **language hegemony**—where English is seen as superior and Punjabi is treated as low-status or "wrong."

Constructive (Constructivist) approach?

The Constructivist Approach to teaching and learning focuses on the idea that knowledge is built **through social negotiation and interaction**. In this approach, **context matters**—learning should be connected to the **real-life experiences** of the learners. It values the **social environment**, where relationships and collaboration play an important role in the learning process. Rather than treating students as blank slates, this method encourages teachers to **build new knowledge on what the learners already know**. It also emphasizes the **application of knowledge** in real-world and **social contexts**, making learning more meaningful, active, and personal.

The constructive approach is based on the idea that students **learn best by doing**, interacting, and thinking critically

For example:

in a bilingual classroom, a teacher asks students to make a **poster on healthy food**. Students discuss ideas in **Urdu and English**, draw pictures, write short sentences in both languages, and present their work. This activity helps them learn by doing, using their **thinking skills and both languages** together. It makes learning more meaningful, enjoyable, and practical.

Transmission Approach?

The Transmission Approach is a traditional method of teaching where **knowledge is seen as a fixed set of facts** that exist **outside the learner**. In this approach, the teacher delivers information in an organized way, usually from **simple to complex**, and the students are treated as **empty vessels** whose job is to absorb and remember the knowledge. This model is **commonly used in conventional classrooms**, where the teacher talks and the students listen silently. It reflects the **accepted norm in many societies**, where education is focused on memorization rather than understanding or discovery.

For example:

In a history class, the teacher **lectures** about important dates and events while students **sit quietly**, take notes, and memorize the information for a test. The teacher explains everything step by step, and there is **no group work or discussion**. Students are expected to **listen, remember, and repeat** the facts as they are taught, without relating them to their own lives or experiences.

Models of teaching and learning bilingual education? Explain

1) **Convergent Teaching Model:**
   - Uses **two languages together**, but one (usually the majority language) dominates.
   - The **minority language** is used only to **support the majority language**.
2) **Immersion Model:**
   - Languages are taught **separately**, each in its own space/time.
   - Often used to **revive or protect a minority language**.
3) **Multiple Bilingual Teaching Model:**
   - Focuses on **translanguaging**, **plurilingualism**, and **language tolerance**.
   - Languages are **blended**, not used separately or strictly.
4) **Grammatical Approach:**

- Focuses on **language rules and structures**.
- Includes:
    - Grammar-Translation Method
    - Direct Method
    - Audio-Lingual Method

5) Communicative Approach:

- Based on **constructivist theory**.
- Students learn language through **interaction and real-life communication**.
- Two common methods:
    - Immersion Instruction
    - Integrated Content-Based Instruction (ICB)

6) Cognitive Approach:

- Focuses on **thinking skills** and **learning strategies**.
- Encourages learners to **reflect, apply, and transfer** knowledge between languages.

Strategies:

- Skimming and scanning
- Selective listening
- Engaging with texts- note taking etc
- Asking for clarifications

Focus on:

- Developing metacognitive skills
- Learner autonomy
- Supporting declarative, procedural and conditional knowledge

7) Constructivist Approach

- Students **build knowledge** through **hands-on activities** and **social interaction**.
- Teacher acts as a **facilitator**, not a one-way knowledge giver.

Note on the 20th Century of English?

During the **20th century**, English expanded globally due to **colonialism**, **economic power**, and later, **global media** like the BBC and CNN. It became a **language of science, technology, and international communication**. The use of English was also politically strategic—many nation-states used English to project a unified identity or to maintain power. This was called a **"politico-strategy"**, where **one dominant language (English)** was often imposed on others within a country. Education systems in many parts of the world enforced **monolingual schooling in English**, even in **multilingual societies**, to support national integration and control. These practices reflected the ideology of the time, which saw monolingualism as more efficient and desirable—even though most of the world was multilingual.

Note on IRE?

IRE stands for **Initiation–Response–Evaluation**, a common pattern used in classroom interactions, especially in traditional settings. In this pattern:

1) The **teacher initiates** a question or instruction,
2) The **student responds**, and
3) The **teacher evaluates** the response as right or wrong.

This method keeps the teacher in control and limits student interaction to short, expected answers. While IRE can be useful for checking understanding, it may not encourage deeper thinking or extended discussion, especially in **bilingual or communicative classrooms**, where students need more chances to express ideas in multiple languages and explore meaning freely. Educators today often encourage moving beyond IRE to more open-ended, student-centered interaction.

Goals of immersion model?

The belief here is that the two languages are best developed **in isolation**. What characterizes this model of bilingual teaching is the explicit carving out of a space for both languages so that each would function with the privilege of a majority language. Thus, all schools using this bilingual teaching have a clear and explicit language policy of teaching monolingually for bilingualism. This immersion bilingual teaching is often used when the **minority language** has to be protected because of the encroachment of the majority language, or in cases where one of the languages is being revitalized.

The **immersion model** is a bilingual teaching method where students are **fully immersed in a second language (L2)** for instruction. The main goals of this model are:

1) To develop high-level proficiency in the second language (L2)
2) To promote bilingualism and biliteracy
3) To preserve or revitalize a minority language
4) To support academic achievement through the second language

Threats students faced when they used mother tongue in the classroom?

In English-medium private schools, students who used their **mother tongue** (like Urdu or a regional language) were often **discouraged**, **shamed**, or even **punished**. Teachers treated English as the only "correct" language, and students speaking other languages were told to **"speak properly"**. This created an environment where students **feared being judged**, felt **low self-esteem**, and were **less confident** in expressing themselves. Even though many students understood content better in Urdu, using it made them feel **less smart** or **less accepted**.

Flexible language arrangements types?

Flexible language arrangements can be of two types:

1) those which lead to convergence, which is the result of the dominance of one language over the other
2) those which lead to multiplicity of languages.

How translanguaging help Code switching in bilingualism?

Translanguaging supports bilingual learners by allowing them to **use all of their language skills together** to express meaning. This naturally includes **code-switching**, where speakers switch between two languages in a single conversation. Translanguaging goes beyond just switching words or phrases—it allows students to **think, speak, read, and write using both languages flexibly**. It helps normalize code-switching as a **valuable communication tool** instead of a language "mistake." In the bilingual classroom, translanguaging encourages learners to use **their full linguistic abilities** to understand and explain ideas, which builds **confidence**, **language awareness**, and **academic success**. Instead of separating languages, translanguaging embraces code-switching as a **natural part of bilingual communication**.

3 components of basic interpersonal communication skills?

1) **Verbal Communication**: Using words to convey messages.
2) **Nonverbal Communication**: Conveying messages through body language, facial expressions, and tone.

3) **Listening Skills:** Actively hearing and understanding the message being communicated.

Additive Bilingualism?

Additive bilingualism happens when a person learns a **second language** (L2) **without losing** their **first language** (L1). Both languages are supported, valued, and used. In this type of bilingualism, the first language is **not replaced or forgotten**, but instead, the new language is **added** to the person's skills. This leads to **bilingual fluency** and often helps improve **academic success, cultural understanding**, and **identity development**.

Example:

A student in Pakistan speaks **Punjabi at home** and learns **English at school**. She becomes fluent in **both languages**—using Punjabi with family and English in academics—without losing her mother tongue. This is **additive bilingualism**.

Social Justice and Social Practices?

Social Justice	Social Practices
Equity	Interactions and involvement
Language of child / language tolerance	Language
Expect actions and rigor	Collaborate ion and group work
Assessment	Relevance

Language revitalization?

Language revitalization is the process of bringing a language back to life when it is in danger of disappearing. Many languages lose speakers over time due to colonization, migration, or social pressure to speak more dominant languages like English or Urdu. Revitalization means making efforts to protect, teach, and use such endangered languages again—especially among the younger generation—so they don't die out. This can be done through education, media, cultural programs, and community support.

Immersion bilingual education?

Immersion bilingual education also uses a sliding bilingual allocation. In total immersion types, 100 percent of the time is initially allocated to the majority child's second language but the child's home language is increasingly used until the two languages are equally divided in a **50:50** relationship.

Developmental bilingual education?

Developmental bilingual education programs also often use a sliding allocation. The initial instruction usually follows a **90:10** relationship with the minoritized language used for 90 percent of the curricular time while it is strengthened as the power of the languages equalize, the other language may be allocated equal time in the curriculum but there are also developmental bilingual education programs which are 50:50 or that allocate the two languages in different combinations.

intra-sentential switches?

Intra-sentential switching happens when a speaker **switches languages within a single sentence**. This type of code-switching occurs **inside one sentence**, not between sentences. It requires a good understanding of both languages, so it is usually done by **fluent bilinguals**.

For Example:

Mujhe homework complete karna hai before 6 o'clock. (Here, the speaker mixes Urdu and English within one sentence.)

Inter-sentential Switches?

Inter-sentential switching is when a speaker **switches languages between two complete sentences**. One sentence is in one language, and the next sentence is in another. This type of switching happens **at sentence boundaries** and is common in bilingual communication.

For Example:

Aaj mausam acha hai. Let's go outside**.**"(First sentence in Urdu, second in English.)

Cummins (2000) Threshold hypothesis?

- Higher proficiency in a language lead to higher gains in learning also L2 learning
- Reading problems may stem from not reaching the threshold

Bilingual vs. Monolingual Children?

Bilingual development:

- Is comparable to monolingual development in children
- Milestones and timing are the same
- But they translanguage

Infants have the ability to:

- Differentiate between two linguistic sound systems
- And remember them
- This makes bilingualism possible

Bilingual children at the age of two can:

- Choose to use either language or
- Mix languages to function
- Some choose to produce only one language

Bilingual children producing only one language validate:

- Intentionality Model for Language Acquistion (Bloom & Tinker, 2002)
- Child agency at the core

how the languages are to be separated?

Decisions as to how the languages are to be separated follow one of four strategies:

1) time-determined separation
2) teacher-determined separation
3) place-determined separation
4) subject-determined separation.

Balanced Bilingualism?

Balanced bilingualism refers to a situation where a person has **equal or near-equal ability** in **two languages**. This means the person can **understand, speak, read, and write** both languages with a similar level of **fluency and confidence**. A balanced bilingual can switch between the two languages **easily and naturally**, depending on the context or the people they are communicating with.

For Example:

A student who speaks **English and Urdu** at home, school, and in writing assignments with **equal fluency**, showing no difficulty in either, is a **balanced bilingual**.

three types of knowledge?

1) **declarative knowledge**, what we know
2) **procedural knowledge,** what we know how to do
3) **conditional knowledge,** the knowledge of when, why, or where to use information and skills.
