MiDterM sUbjeCtiVE

IMP MCQs

1) folk culture is highly valued in **Norway**

2) What is first language?

1. Before birth 2. After birth 3. At school level 4. babbling stage

3) Degree of maintenance or shift may be quite different in each of several distinguishable domains of language behavior is **Domain variance**.

4) **Co-language** means using both languages simultaneously.

5) For speakers of a minority language in an ethnic community is **Economic.**

6) **Political:** The use of certain languages may be maintained by the pressure of political circumstances.

7) Majority of Language??

1. Bilingual 2. Multilingual 3. Monolingual 4. Monolingual and bilingual both

8) we may admit that the concept of reference **group membership** enables us to recognize some invariable of habitual language choice in stable multilingual settings.

9) The interconnections between the two languages comprise association and **translation systems**

10) Bilingual education is **different from** traditional language education programs that teach a second or a foreign language.

11) In the **reductive view,** bilingual education has been often interpreted as being the simple sum of discrete monolingual language practices

12) Bilingualism is **not a static** and **unitary phenomenon**

Subjective

Dominance configuration?

OR

How does domain configuration happen in language variance?

A description and analysis of **the simultaneous, cumulative effect** of all of the above-mentioned sources of variance in language choice provides a dominance configuration (Weinrich, 1953). Dominance configurations summarize data on the language choice behavior. **Repeated dominance configurations** for the same population, studied over time, may be used to represent evidence of language maintenance or shift in a particular multilingual setting. Although the dominance configurations till requires much further refinement, it seems to merit the time and effort that such refinement might necessitate. The domain concept has also helped refine the distinction between **coordinate bilingualism and compound bilingualism**.

Swain model? IMP

Swain (1977) postulated a **'common storage model'** of bilingual development according to which all rules of both languages are initially stored in a common location and subsequently tagged as appropriate for a particular language through a process of differentiation. The title of Swain's (1972) thesis—Bilingualism as a first language —exemplifies the unitary-system interpretation of early bilingual development.

Three stage model?

Volterra and Taeschner (1978) have interpreted language mixing in terms of a three-stage model:

1) Initial unification of both lexical and syntactic subsystems
2) Differentiation of the lexicon but continued unification of syntax
3) Finally, differentiation of both the lexicon and syntax

What principles language behavior is based?

Language behavior is based on the following five principles:

1) There is a constant interaction between the societal and the individual dynamics of language.

2) There are complex mapping processes between the form of language behavior and the functions it serves.
3) There is a reciprocal interaction between culture and language.
4) Self-regulation characterizes all **higher-order behaviors**, and therefore language.
5) Valorization is central to these dynamic interactions.

Multilingualism proficiency at societal and personal level?

Multilingualism is an important resource at both the societal and personal levels. **1**

1) **Personal Level (Individual Multilingual Proficiency):**

At the individual level, multilingual proficiency is **not uniform across languages or skills**. It varies based on:

- ❖ Domain-specific use
- ❖ Skill-based variation
- ❖ Balanced vs. Dominant bilingualism
- ❖ Functional proficiency

🏗️ **2. Societal Level (Community Multilingual Proficiency):**

At the societal level, multilingualism is shaped by:

- ❖ Language roles in institutions
- ❖ Official language policies
- ❖ Diglossia
- ❖ Social stratification

Define the term code switching and enlist 5 characteristics of code switching?

Code-switching is the **alternation between two or more languages or dialects** within a single conversation, sentence, or even utterance.

✳️ **Five Key Characteristics of Code-Switching:**

1) **Rule-Governed**:

Not random—follows linguistic and grammatical rules.

2) **Context-Dependent**:

Depends on social setting, participants, topic, and identity.

3) **Strategic Use**:

Used to achieve communicative goals (e.g., emphasis, clarification).

4) **Occurs at Multiple Levels**:

May happen at sentence boundaries, phrase level, or even within words (intra-sentential).

5) **Reflects Bilingual Competence**:

Demonstrates a high level of fluency and flexibility, not confusion

define culture and how it relates to language?

Culture refers to the shared **beliefs, values, customs, behaviors, and artifacts** that characterize a group or society. It is the framework through which people interpret the world, communicate, and behave.

📘 **Relation Between Culture and Language:**

Language and culture are **deeply interconnected**—each influence and reflects the other. Here's how:

1) **Language Expresses Culture**:

Language is the primary medium through which cultural knowledge, traditions, and norms are passed on (e.g., idioms, proverbs, greetings).

2) **Culture Shapes Language Use**:

The way people use language—politeness, formality, humor, taboos—is shaped by their cultural values and social rules.

3) **Reciprocal Relationship**:

"There is a reciprocal interaction between culture and language**.**"

4) **Language Behavior is Culturally Guided**:

How language is learned, when and where it is used, and what is considered "appropriate" language depends on cultural context.

language behavior factors???

Language behavior refers to the way individuals and communities **use language in real-life contexts.** It includes speaking, understanding, reading, writing, and switching between languages, shaped by various internal and external factors.

✅ **Key Factors Influencing Language Behavior:**

1) 🧠 Psychological Factors
2) 🌐 Sociocultural Factors
3) 👫 Social Network Factors
4) 🏛️ Societal Factors
5) 🗣️ Linguistic Factors

internal speech factor?

Internal speech refers to the **inner verbal thought process**—how individuals think using language silently in their minds. It's an internalized form of speaking, often linked to self-regulation, planning, memory, and problem-solving.

✅ **Internal Speech as a Language Behavior Factor Includes:**

1) Planning and problem-solving (e.g., mentally rehearsing what to say)
2) Self-monitoring (e.g., catching a mistake before speaking)
3) Cognitive processing (e.g., using language to analyze ideas)
4) Emotion regulation (e.g., using inner speech to calm oneself)

What is bilingual education?

We immediately think of someone who has a good command of two languages as bilingual; and the use of two languages in education as **bilingual education** but, as Cazden and Snow (1990) point out, bilingual education is "a simple label for a complex phenomenon." Colin Baker (1993: 9), one of the most **perceptive scholars** in the field of bilingual education, suggests that sometimes the term bilingual education is used to refer to the education of students who are already speakers of two languages, and at other times to the education of those who are studying additional languages.

Bilingual education refers to a **formal educational program** in which **two languages** are used as **mediums of instruction** for teaching academic content. Its goal is to enable students to become proficient in both **the mother tongue** and a second language, while also developing subject matter knowledge.

How bilingual education is different from traditional language education programs?

Bilingual education is **different from traditional language** education programs that teach a second or a foreign language. For the most part, these traditional second- or foreign-language programs teach the language as a subject, whereas bilingual education programs use the language

as a medium of instruction; that is, bilingual education programs teach content through an additional language other than the children's home language. More than anything else, bilingual education is a way of providing meaningful and **equitable education**, as well as an education that builds **tolerance towards** other linguistic and cultural groups. In so doing, bilingual education programs provide a general education, teach in two or more languages, develop multiple understandings about languages and cultures, and foster appreciation for human diversity.

🎯 **Purpose of Bilingual Education:**

- Promote biliteracy and bilingual competence
- Support academic achievement in both languages
- Foster cultural understanding and integration
- Empower linguistic minorities and preserve heritage languages

five uses of language?

1) We use language to tell facts or explain things.
2) We use language to express how we feel.
3) We use language to ask people to do something
4) We use language just to be friendly or keep in touch
5) We use language in poems, songs, or stories to sound nice or make art
6) We use language to explain words or grammar.

components of language policy?

1) **Language management** – also known as language planning, language intervention, language engineering, or language treatment, and referring to direct efforts to manipulate the language situation
2) **Language practices** – the habitual pattern of selecting among varieties that make up its linguistic repertoire; related to what Hymes (1967) calls ethnography of speaking
3) **Language beliefs or ideology** – the beliefs about language and language use

seven goals of language policy?

1) **Identity,** as when states impose certain languages as a link to specific identities. For example, France has maintained that it is a perfect hexagon and that only French is tied to French identity.
2) **Ideology,** as when states or groups impose different languages or standards as a result of an ideology.
3) **Image creation**, as when states try to ensure that a favorable view is taken of their history and language by projecting its language
4) **Insecurity**, as when states or groups are wary of others and their languages.
5) **Inequality,** as when states or groups act on language in order to correct inequalities in society. This is the case, for example, of non-sexist language that came to be used especially during the 1970s and 1980s

6) **Integration with a group**. This was the case when, for example, in Wales, fol- lowing the Education Act of 1870, Welsh children were not only required to learn English in school, but prohibited from speaking Welsh.
7) **Instrumental motives**, as when groups or individuals acquire a second language because it will give them advantages, usually economic ones, in the market or in careers. This is the case especially of English throughout the world.

three dimensions of the language policy (LP)?

1) **Corpus planning:** Changing the form of the language itself through standardization (standardizing language forms), graphization (developing a writing system), modernization (coining new words and terms)
2) **Status planning**: Modifying the status and prestige of the language
3) **Acquisition planning**: Developing new users of the language. Acquisition planning is especially relevant to those of us interested in bilingual education because school is the most important agent in acquisition planning

Three language rights?

1) **Right to education**: Access to instruction in one's native language.
2) **Right to preservation**: Maintain and use one's language without discrimination.
3) **Right to participation**: Engage in public life using one's language.

dimensions of bilingualism? IMP

"**Bilinguality** is a **psychological** state of an individual who has access to more than one linguistic code… This access is multidimensional as it varies along a number of psychological and sociological dimensions."

Dimensions of Bilingualism:

1) **Relative competence**: competence in both languages as either

(a) Balanced bilinguality: **equal proficiency** in both languages

(b) Dominant bilinguality: **higher proficiency** in one language

2) **Cognitive Organization:** compound bilinguality vs. coordinate bilinguality

3) **Age of acquisition:** childhood (before the age of 11); **adolescence (11-17** yrs), adult (after 17 yrs) acquisition and simultaneous vs consecutive bilinguality

4) **Cultural Identity**

a) Bicultural bilinguality**:** double membership and bicultural identity

(b) Monocultural bilinguality**:** L membership and cultural identity

(c) Acculturated bilinguality**:** L membership and cultural identity

(d) Deculturated bilinguality**:** ambiguous membership and anomic identity

5) Exogeneity

a) Endogenous bilinguality: presence of both languages in the community environment

(b) Exogenous bilinguality**:** absence of the second language in the community

6) Social cultural status: This includes either of the following:

(a) Additive bilinguality: (both languages encouraged equally give socially valorized cognitive advantage

(b) Subtractive bilingualism: (one language encouraged at the expense of the other, leading to cognitive disadvantage).

Aim of bilingual education?

The primary aim of bilingual education is to **develop proficiency in two languages** fostering academic and cognitive growth while preserving cultural identity and promoting social inclusivity

Aims of Bilingual Education:

1) Develop Proficiency in Both Languages
2) Support Cognitive and Academic Growth
3) Promote Biliteracy and Biculturalism
4) Ensure Equal Educational Opportunity
5) Preserve and Revitalize Minority Languages

What Is the Meaning of Coordinate and Compound Bilingualism?

Compound Bilingualism

A compound bilingual learns two languages in the same context and stores both languages in one mental system. Words and concepts in both languages are linked to a single set of meanings.

Example: A child learning both English and surd at home at the same time with overlapping experiences.

Coordinate Bilingualism

A coordinate bilingual learns two languages in separate contexts and stores them in distinct systems. Each language is associated with its own meanings and experiences.

Example: A child who speaks Urdu at home and learns English at school.

Disadvantages of Bilingualism? Lower Proficiency in One or Both Languages

- Language Interference
- Lower Proficiency in One or Both Languages
- Slower Vocabulary Development
- Social or Cultural Discrimination
- Cognitive overload in young learners.

Regularities to show meaning?

Regularities to show meaning refer to the patterns or consistent features in language use that help convey not only literal meaning, but also social, emotional, or contextual meanings.

These regularities can appear in word choice, structure, tone, accent, or even when and how a language is used, and they help listeners interpret the speaker's intention, social identity, or emotional state.

Is Bilingualism Rich in Extended Families?

Yes — bilingualism is often more common and richer in extended families.

In extended families, language maintenance is more likely, and bilingualism is richer due to the presence of grandparents or relatives who speak and use the heritage language regularly. This is especially important in **multilingual or minority-language** communities, where the home environment supports additive bilingualism. Extended families provide a **low-pressure, supportive setting** for language practice: siblings, cousins, and relatives engage in play, meals, and storytelling, allowing children to acquire complex structures—and even local dialects—without formal instruction.

Levels of Domain?

a domain refers to a specific social setting or sphere of activity where language is used (e.g., home, school, workplace). Domains help explain why bilinguals or multilinguals choose one language over another depending on the context.

Domains operate at **three main levels**:

1) Societal Level
2) Social Network Level
3) Individual Level

Negotiation principles?

Negotiation principles in bilingualism refer to the **strategic choices speakers make** in real-life communication to **adjust language, formality, and code** depending on:

- The listener's background
- The social context
- The topic
- The goal of the conversation

These principles guide how speakers **negotiate meaning, identity, and understanding** using multiple linguistic resources.

Balanced bilingualism?

Balanced bilingualism presents a picture of children and adults who are **equally competent** in two languages in all contexts and with all interlocutors. Although this is still a widely accepted idea, especially among educators, it has long been recognized that such a form of bilingualism does not exist. The belief in balanced bilingualism holds that a bilingual is like two persons, each fluent in one of the **two languages**. More realistically, a bilingual is a person that "languages" differently and that has diverse and unequal experiences with each of the two languages. The languages of an individual are rarely socially equal, having different power and prestige, and they are used for different purposes, in different contexts, with different interlocutors.

Balanced bilinguality: **equal proficiency** in both languages

Territorial bilingualism?

Territorial bilingualism is a situation in which **each group finds itself mostly within its own politically defined territory with the two** (or more) languages having official status in their own territory; the official status of the other national language(s) varies considerably from country to country. Examples of territorial bilingualism include Belgium, Canada and India.

Finally, a bilingual community can be described **as diglossic**, that is, two languages are spoken by a variable section of the population, but they are used in a complementary way in the community, one language or variety having a higher status than the other and being reserved for certain functions and domains.

The dominant bilingual?

The dominant bilingual was defined as one for whom competence in one of the languages was superior to the competence in the other. Objecting to the use of speed tests to determine language dominance of bilinguals, Fishman et al. (1971) argued that where **bilingualism is socially constructed,** and not merely an occupation or hobby, the concept of language dominance as determined by speed tests is irrelevant. Bilinguals are much more than just two monolinguals, and often, as we will see, it is difficult **to disentangle abilities** and functioning in one language

from that in the other. It is true, however, that for some tasks, and when requested to act monolingually, bilinguals might be more dominant in one language than the other. Language dominance **is task-specific**. Bilinguals generally **trans language**. It is only when bilinguals are forced to choose only one language in carrying out a precise task that we may be able to speak of their language dominance for that exact event.

idea of 'triggering'?

Michael Clyne argues that the grammatical constraints and the grammatical models of code-switching cannot be substantiated universally. He further develops the idea of 'triggering', which he proposed in his earlier work namely, an item of **ambiguous affiliation**—i.e. one belonging to the speakers' two systems triggers off a switch from one language to another. He points out that **trigger words are not part of the switch**, but indicative of the psycholinguistic process by which the bilingual speaker plans and produces his or her speech.

Name the three forms of language mixing? IMP

Language mixing during the early stages of bilingual development has been interpreted in general terms as evidence of a unitary-language system with undifferentiated phonological, lexical and syntactic subsystems. **This would mean that 'Words from the two languages did not belong to two different speech systems but to one**…' (In Hatch, 1978:27)

1) semantic mixing
2) pragmatic mixing
3) syntactic mixing

Difference b/w bilingualism and bilinguality?

Bilinguality (📍Individual level)	**Bilingualism (📍Societal/Community level)**
bilinguality is the **psychological state** of an individual who has access to more than one linguistic code as a means of social communication.	bilingualism is the **logical state** of the individual who has access to more than one linguistic code.
It means an **individual person** knows and uses **two languages**.	It means **two languages are used in a society**.
It is about what's happening **inside a person's brain** — how they **understand**, **store**, and **use** both languages.	It focuses on how **groups of people** or **countries** use two languages in daily life.
Example: If *you* speak Urdu at home and English at school, **you have bilinguality**.	**Example:** In **Canada**, people speak both English and French — this is **bilingualism**.

Difference between Language shift or Language attrition?

Language shift (Group level – across generations)	**Language attrition (Individual level – within a person)**
Language shift is defined as the change from the use of one language to the use of another language **across generations**.	language attrition is a shift occurring **within one individual.**
Happens when a **community** or **group** slowly stops using their native language and starts using another language.	Happens when a **person forgets** or **loses skills** in a language they once knew.
In some immigrant families, grandparents speak **Punjabi**, but the children only speak **English** — this is a **language shift**.	If someone grew up speaking **Urdu**, but moved to France and used only **French** for many years — they may **forget Urdu words or grammar** — that's **language attrition**.
Often caused by **social, political, or educational pressure**.	Often occurs when a person **stops using** a language regularly.

different types of language variation?

1) Regional Variation
2) Social Variation
3) Situational/Contextual Variation
4) Stylistic Variation (Register)

Regulatory factors Explain?

Some of the controlling regulatory factors in language choice are as follows:

1) **Group membership:**

This factor must be viewed not only in a purportedly objective sense, i.e., in terms of physiological, sociological criteria (e.g., **age, sex, race, religion**, etc.), but also, and primarily, in the subjective socio-psychological sense of reference group membership.

The very existence of certain reference groups seems to depend largely on location, setting or other environmental factors rather than on group consciousness or group-experience as such. It also seems unnecessarily difficult to analyze language choice within large, complex, literate societies in terms of the **enormous repertoire** of shifting reference groups which these provide. Thus, while we may admit that the concept of reference group membership enables us to recognize some invariable of habitual language choice in stable multilingual settings it does so only at a considerable risk, while leaving many **exceptional cases** in the dark.

2) **The regulatory factor of situation:**

This term has been used to designate a large (and, at times, confusing) variety of considerations. Indeed, it has been used to designate various separate considerations as well as theirco-occurrence. Each of these aspects of **"situation"** may shed light on certain regularities in language choice on particular social occasions. However, the possible co-occurrence of so many variables must also make it exceedingly difficult to use the concept "situation," for analytic purposes.

We can therefore, limit our use of this term to considerations of "style" alone, and attempt to cope with the other itemized features in other ways and in their own right. Situational styles pertain to considerations of **intimacy-distance**, formality-informality, solidarity—non-solidarity, status (or power) equality-inequality, etc. Thus, certain styles within every language (and, in multilingual settings, certain languages in contrast to others) are considered by particular **interlocutors to be indicators** of greater intimacy, informality, equality, etc.

3) Topic:

Even when reference group and situation agree in requiring a particular language, it is not uncommon to find that topic succeeds in bringing another language to the fore. The implication of topical regulation of language choice is that certain topics are somehow handled better in one language than in another in particular multilingual contexts. Thus, some multilingual speakers may **"acquire the habit"** of speaking about topic x in language X partially because that is the language in which they were trained to deal with this topic. Topics tell us little about either the process or the structure of social behavior. topic is doubtlessly a crucial consideration in understanding language choice variance.

Enlist ways of communication in 21st century?

Bilingualism for the **twenty-first century** must be more than the knowledge of two languages. Abilities such as translation, language switching and designing information bilingually will be increasingly important, abilities that are supported by the community's translanguaging. The recursively and dynamism of bilingualism today, that is, its **adaptive nature** to an increasingly socially complex context, demands bilingual skills that are much more than just monolingual skills in **two separate contexts**. If we focus then not on separate languages as we have done in the past, but on the bilingual or **multilingual discourse practices** that we need and that are readily observable in bilingual classrooms, we can see that bilingual arrangements that build on translanguaging are the only way to build the plurilingual abilities that we will need in the future.

Describe language functions?

Bilingualism can also be a consequence of language function, that is, the use to which one puts either language. In fact, language ability and language function are **often interrelated**, since one has to have the possibility to function and use a specific language or two languages in order to develop ability to engage in **language practices** that use either or both of the languages.

Language functions refer to the **purposes** or **uses** of language in communication — **why** we use language and **what for**.

Semilingualism and its flaws?

A bilingual who could not acquire full competence in any of the languages were termed as **'semilinguals'**. They were believed to have linguistic deficits in six areas of language

1) ze of vocabulary
2) Correctness of language
3) Unconscious processing of language
4) Language creation 5.
5) Mastery of the functions of language
6) Meanings and imagery

Flaws:

1) **First la**nguage may be specific to a context; a person may be competent in some contexts but not in others.
2) **Second,** bilingual children are still in the process of developing their languages. It is unfair to compare them to some idealized adults.
3) **Third,** the comparison with monolinguals is also unfair.
4) **Fourth**, if languages are relatively underdeveloped, the origins may not be in bilingualism per se, but in the economic, political and social conditions that evoke under-development

Difference between education program and bilingual education?

bilingual education	Education Program
bilingual education is used to refer to the education of students who are already speakers of **two languages**, and at other times to the education of those who are studying additional languages.	bilingual education programs use the language as a medium of instruction; that is, bilingual education programs **teach content through an additional language** other than the children's home language.
One is usually the **native/home language**, and the other is the **official/second language**.	Focuses on **subjects** like math, science, literature, etc.
Example: In a school where students learn **math in Urdu** and **science in English**, that's **bilingual education**.	Example: A school in Pakistan teaching all subjects in **Urdu or English only** is a regular **education program**.

Language Change (True /False)

Language is **never static** but changes over time. **Pidginsation** is an example in this regard which is developed for the purpose of minimal communication between individuals/ groups speaking mutually unintelligible vernaculars. In the pidginisation process, **limited and simplified linguistic** forms are developed. As the need for communication or function increases in the society, new forms are created by the speakers. Gradually these new forms serve extended

functions until **pidgin evolves into a creole (form)** as it becomes the mother tongue of the next generation, and thereby serves new functions. The forms of language undergo constant changes due to social changes, emergence of **new technologies and contact** with other languages. New forms apply to old functions, as when a new expression is used by teenagers; in the same way old forms apply to new functions, as for example; the English word save in using a computer; or new forms can be developed for new functions (e.g. new terminology).

Levels of domains of socio-psychological?

A domain is a **socio-cultural construct** abstracted from topics of communication, relationships between communicators, and locales of communication, in accord with the institutions of a society and the spheres of activity of a culture. a domain is a **higher order** of abstraction or summarization which is arrived at from a consideration of the socio-cultural patterning which surrounds language choices.

Nine domains recommended by **Schmidt-Rohr were**:

1) he family
2) the playground and street
3) the school
4) the church
5) literature
6) the press
7) the military
8) the courts
9) governmental administration

Diglossia?

Diglossia not only defines a concept but also develops an approach to bilingualism which has been extremely influential. It originates from the fact that the **co-existing languages** of a community are likely to have different functions and to be used in different contexts. A distinction is made between **High (H) and Low (L)** language varieties and Ferguson noted nine areas in which H and L could differ.

OR

Diglossia is a situation where **two varieties of the same language** (or **two different languages**) are used by the **same speech community**, but in different social settings.

What Is Belief Research?

Belief research refers to the study of what people **believe or feel** about:

- Language learning
- Bilingualism or multilingualism

- Language teaching
- Cultural identity through language

sources of variance? Explain

1) **Media variance:**

writing, reading and speaking: Degree of mother tongue maintenance or displacement may be quite different in each of these very different media. Where literacy has been attained prior to interaction with an **"other tongue"** reading and writing use of the mother tongue may resist displacement longer than speaking usage.

2) **Role variance:**

Degree of maintenance or shift may be quite different in conjunction with inner speech (the **language of thought, of talking to one's self,)**, **comprehension (decoding, for self),** and production (encoding, for others). There is some evidence that language shift is most resistant to inner speech.

3) **Situational variance: (Also True false from this)**

Degree of maintenance or shift may be quite different in conjunction with **more formal, less formal and intimate communication** (Fishman, 1965a). Language shift is resisted more in intimate situations.

4) **Domain variance:**

Degree of maintenance or shift may be quite different in each of several distinguishable domains of language behavior.

How attitude towards bilingual that may accor personal and societal level?

Attitudes do not, of course, remain constant over time. **At a personal level**, changes in attitudes may occur when there is **some personal reward involved**. Speakers of minority languages will be more motivated to maintain and use their languages if they prove to be useful in increasing their employability or social mobility. In some cases, certain jobs are reserved for bilingual speakers only.

At the societal level, attitudes towards bilingualism change when the **political ideology changes**. Since the 1960s, there has been a political movement, particularly in the US, advocating language rights. In the US, questions about language rights are widely discussed, not only in college classrooms and language communities but also in government and federal legislatures. The **legal battles** concerned not just minority language vs. majority language contests, but also children vs. schools, parents vs. school boards, state vs. the federal authorities, etc.

Baker (2001: 4) points out, "the ownership of two languages is not as simple as having two wheels or two eyes" explain this.

As Baker (2001: 4) points out, "the ownership of two languages is not as simple as having two wheels or two eyes." and being educated bilingually cannot be equated to being given two balanced wheels like those of a bicycle: bilingual education is not simply about one language plus a second language equals two languages. The vision of bilingual education as a **sum of equals reduces** bilingual education to the use of two or more separate languages, usually in different classroom spaces, time frames, contexts, or as spoken by different teachers. In this reductive view, bilingual education has been often interpreted as being the simple sum of discrete monolingual language practices. Separate and full competencies in each language are expected of students. Furthermore, these **"idealized"** bilingual education practices take little account of how languages are used in society, or of real bilingual and multilingual practices.

Baker is reminding us that bilingualism is **not mechanical** or **simple** — it's a **complex, flexible system** where languages **blend**, **overlap**, and **influence** each other.

How many areas at which High and low language varieties differ by Ferguson?

A distinction is made between High (H) and Low (L) language varieties and Ferguson noted nine areas in which H and L could differ.

These areas include:

1) Function
2) Prestige
3) Literary Heritage
4) Acquisition
5) Standardization
6) Stability
7) Grammar
8) Lexicon
9) Phonology

Difference between Additive bilingualism and Subtractive bilingualism?

Additive bilingualism	**Subtractive bilingualism**
Additive bilingualism occurs when the learning of a second language **adds to a learner's** skills, without harming the first language	Subtractive bilingualism is when the second language is learned at the **cost of the first**, especially when the first is considered **lower status.**

Example:	**Example:**
A child learns **English** at school while still speaking **Urdu** fluently at home. Both languages grow together.	A child starts learning **English** at school and gradually **forgets Punjabi or Urdu**, feeling ashamed of their native language.
Both languages are **maintained and valued**.	The second language **replaces** the first one over time.

How language store in mind bilingualism?

A bilingual person doesn't store two languages in the brain like **two separate boxes**. Instead, the brain creates a **new system** that can handle **two languages together**. This system allows interaction between the two languages and **switching** from one to the other depending on the situation.

Both languages are active in the brain at the same time. A bilingual person can easily **access** either language based on context. This leads to **code-switching** (mixing languages), not due to confusion, but due to how the brain stores and accesses both languages.

Discuss the main reason of language contact?

Language contact situations arise when speakers of different languages are put in a position that they **need to interact with** each other. There are several reasons for language contact. These reasons can be

1) individual and voluntary
2) structural and non-voluntary
3) Migration
4) Trade & Commerce
5) Colonization
6) Education & Media
7) Globalization

Productive and Receptive bilingual abilities?

Productive bilingual abilities mean that bilinguals are capable of speaking, writing and producing signs in more than one language.

Receptive bilingual abilities mean that they may understand, read or attend to, or interpret, signs in more than one language, although they cannot speak, write, or produce signs in more than one language. There are **four circumstances** that often produce receptive or passive bilinguals:

1) Children of immigrant or **minority backgrounds** whose home languages are not promoted in the wider society are often able to understand their parents and elders, but are incapable of speaking the language themselves.

2) Deaf children who are born to hearing parents, and whose education excludes **the use of sign language,** may not develop the ability to productively sign the standardized sign languages.

3) Those who have learned a language in **traditional language** programs may understand, read, and interpret the language learned well, although they may be incapable of speaking, writing, or producing signs. Scholars of extinct languages also have biliteracy skills but may never be in a position to develop oracy in a language that they have never heard.

4) Bilingualism can also be a consequence of language function, that is, the use to which one puts either language. In fact, language ability and language function are often i**nterrelated**, since one has to have the possibility to function and use a specific language or two languages in order to develop ability to engage in language practices that use either or both of the languages.

Define Relative competence.?

Relative competence:

competence in both languages as either

(a) **Balanced bilinguality**: equal proficiency in both languages

(b) **Dominant bilinguality**: higher proficiency in one language

In bilingualism what is the concept of Heteroglossia Ideologies?

A heteroglossic ideology of bilingualism considers multiple language practices in interrelationship, and leads to other constructions of bilingual education.

It refers to how people use different forms of language depending on context, audience, identity, and power.

Difference between language and dialect?

The differences between dialect and languages are made **on the basis of size**. Language is believed to be a larger repertoire of linguistic items and subsuming dialects. The difference between a dialect and language is also explained in terms of their **mutual intelligibility** i.e. where two languages may not be **mutually understood** by speakers, the dialect of a language might be mutually understood. Lastly, a language holds more prestige than a dialect. However,

these distinctions are not inherent qualities of a language or a dialect. Dialects may undergo a **deliberate process of** standardization that expands its vocabulary and its functions to give it a status of language. Language formation is a result of a deliberate decision-making. Several dialects are not mutually intelligible while some languages are mutually intelligible but still considered languages. The example, **Urdu and Hindi can be cited** here. Hence, the difference between the dialect and language is related to the power and status of its speakers.

Factor that affects verbal message?

1) The participants, i.e. speakers, addressees, and audiences;
2) The ecological surroundings; and
3) The topic or range of topics

Verbal communication may be seen as a **two-step process**.

Step 1: Speakers take in clues from the outside and translate them into appropriate behavioral strategies. This step parallels the perceptual process by which referential meanings are converted into sentences.

Step 2: These behavioral strategies are in turn translated into appropriate verbal symbols.

Cognitive Advantages?

More recent research has shown that bilinguals may have some advantages in thinking, ranging from creative thinking to faster progress in early cognitive development and greater sensitivity in communication. For example, bilinguals may have two or more words for each object and idea; sometimes corresponding words in different languages have different connotations.

Ethnicity of researcher?

The ethnicity of the researcher can influence:

- **How participants respond** (trust, openness)
- **Interpretation of data** (due to cultural understanding or bias)
- **Access to communities** (especially in fieldwork involving minority or indigenous groups)

Communicative advantages of bilingualism?

1) **Relationships with parents and extended family:** Where parents have differing first languages, the advantage of children becoming bilingual is that they will be able to communicate in each parent's preferred language. Being a bilingual allows someone to bridge the generations.

2) **Community relationships**: Bilingual has a chance to communicate with a wider variety of people than a monolingual.

3) **Transnational communication**: One barrier between nations and ethnic groups tends to be language and bilinguals can bridge that.

4) **Language sensitivity**: Being able to move between two languages may lead to more sensitivity in communication because bilinguals are **constantly monitoring** which language to use in different situations, they may be more tuned to the communicative needs of those with whom they talk.

Measures of Bilingual Specificity?

Translation and verbal flexibility are only measures in which the bilingual's behavior is viewed as the sum of two monolingual behaviors. A bilingual also develops patterns of behavior that are unique to his **state of bilinguality** (Grosjean, 1985a). For example, when bilinguals communicate with each other they can make simultaneous use of the resources of each of their languages, for example by borrowing words from one language while using the other (loan words) or by developing mixed or switched codes which are governed by their own specific rules. There is an attempt to correlate the **degree of balance** of bilinguals with a high level of competence in rule-governed code-switching.

Influence language behavior?

Language behavior means how individuals or communities **choose, switch, or use** languages in communication.

1) Social Factors
2) Domain of Use
3) Attitudes and Beliefs
4) Political and Economic Pressure
5) Media and Technology

how many languages are in Africa?

in Africa, a university's efforts to integrate students and include non-Afrikaans-speaking students rest on delivering the curriculum in a **bilingual mode** in the power point, with Afrikaans and English co-present. Having both languages present on the screen, each in a different color, enables the inclusion of all students while reserving room for Afrikaans, the language traditionally used in **the university.** Especially at the secondary and tertiary level, **co-languaging** is becoming a familiar curricular language arrangement when the content has to be delivered to different language groups simultaneously.

Pressure as factor of contact?

In each of the areas of contact, there may be a number of pressures which influence the bilinguals in the use of one language rather than the other. These may be **economic, administrative, cultural, political, military, historical, religious, or demographic.**

1) **Economic:** For speakers of a minority language in an ethnic community, the knowledge of the majority language may be an economic necessity.
2) **Administrative:** Administrative workers in some areas are required to master a second language.
3) **Cultural:** In some countries, it may be essential, for cultural reasons, for any educated person to be fluent in one or more foreign languages.
4) **Political:** The use of certain languages may be maintained by the pressure of political circumstances.
5) **Military:** A bilingual who enters the armed forces of his country may be placed in situations which require him to hear or speak his second language more often than he otherwise would.
6) **Historical:** The languages a bilingual learns and the extent to which he must learn them may have been determined by past historical events. If the language of a minority has been protected **by treaty**, it may mean that the minority can require its children to be educated in their own language.
7) **Religious**: A bilingual may become fluent in a language for purely religious reasons. A person entering a religious order may have to learn Latin, Greek, Coptic, Sanskrit, and Arabic.
8) **Demographic**: The number of persons with whom the bilingual has the likelihood of coming into contact

Level of analysis according to the functional approach?

(1) There is a **constant interaction** between the dynamics of language behavior at the societal level and language behavior at the individual level.

(2) There is a **constant and complex mapping** process between the form of language behavior and the function it is meant to fulfil.

(3) **Language behavior** is the product of culture and as such it follows the rules of acculturated behavior.

(4) **Self-regulation** is a characteristic of all higher-order behaviors and therefore of language behavior. By this we mean that a behavior is not a mere response to stimuli but that it takes into account past experiences; furthermore, it does not follow a pattern of trial and error but is an evaluative response calling upon the individual's cognitive and emotional functioning adapted to a given situation.

(5) **Finally,** one concept central to this dynamic interaction between the societal l e v e l and the individual level is valorization. By valorization we mean the attribution of certain positive values to language as a functional tool, which will facilitate the fulfilment of communicative and cognitive functioning at all societal and individual levels.

Difference between pidgin and creole?

Pidgin:

- A simplified language system used for communication between groups with different languages
- Typically used for trade, commerce, or other limited purposes.
- Has a reduced grammar and vocabulary.
- Pidgins are always learned as second languages.

Pidgin:

- A simplified language system used for communication between groups with different languages.
- Typically used for trade, commerce, or other limited purposes.
- Has a reduced grammar and vocabulary.
- when pidgins become nativized and standardized, and adopted as the language of the home by a majority of the population, they are known as creoles.

In essence, pidgins are used for specific purposes, while creoles are full-fledged languages.

Five characteristics of pidgin?

1) No Native Speakers
2) Simplified Grammar
3) Limited Vocabulary
4) Mix of Languages
5) Used in Specific Contexts
6) No mutual intelligibility

Three Levels of Interpretation?

1) Literal: Direct meaning based on language rules.
2) Contextual: Meaning inferred from situational cues.
3) Symbolic: Deeper or abstract meanings beyond the immediate context
