ENG513

By niMma mAlik

Finals July 2K25

Acronyms

English for Vocational Purposes (EVP).

British National Corpus (BNC)

Students with Limited English Proficiency (SLEP)

BBC = British Broadcasting Corporation (UK-based)

CNN = Cable News Network (US-based)

Repeated Reading (RR)

EOP (English for Occupational Purposes)

Common European Framework of Reference (CEFR)

Task-Based Language Teaching (TBLT)

EAP (English for Academic Purposes).

vocationally oriented language learning (VOLL)

English for specific purposes (ESP)

Content-Based Instruction (CBI)

r content and language integrated learning (CLIL)

Cooperative Language Learning (CLL)

Collaborative Learning (CL)

French as a second language (FSL)

English as an additional language (EAL)

BIA (Bilingual Interactive Activation)

Strengths, weaknesses, opportunities and threats (SWOT)

Teaching English to Speakers of Other Languages (TESOL)

Competency-Based Language Teaching (CBLT)

English Language Teaching Reforms (ELTR)

MULTIPLE INTELLIGENCES (MI)

Competency-Based Education (CBE)

Intensive Language Course (ILC)

information and communication technologies (ICT)

English as an International Language (EIL)

English Language Teaching Reforms (ELTR)

IMP MCQs

1) Indirect activities may, include **extensive reading and extensive viewing**.

2) **Task repetition** is the repeated use of the same or similar communication task or discourse sequences by learners with the same or different people.

3) a good **speaker** is someone who is able to influence others with his or her words.

4) Wells appeals to **contrastive analysis (CA)** as a way to locate areas of difficulty.

5) Nation argues that **vocabulary** knowledge affects students' language skills performance.

6) **Samuels (1984)** classified L1 listening comprehension difficulties into external, medium, and internal factors.

7) needs analysis serves as the basis for informed curriculum practices in **ESP** instructional design.

8) The **assessor** is someone who assesses **the performance** based on the defined standards.

9) L2 vocabulary learning rates are **slow and uneven**, unlike L1 vocabulary learning.

10) EVP instruction is to help students function well in a **workplace or a vocational** higher education setting where English serves as a medium of communication.

11) Listening had been considered a **passive skill** and its main purpose was to extract meaning from texts.

12) The role of **materials** is very crucial in designing any language instruction.

13) **Vocationally Oriented Language Learning** (VOLL)

14) **monologic tasks** require learners to present ideas, information and views individually to a single listener or a group of listeners.

15) assessment is an **ongoing interactive** process.

16) A theory-based listening lesson involved **three stages**: **pre-listening, while-listening and post-listening.**

17) **8000–9000**-word families are required to deal with most spoken texts.

18) Although **Jenkins (2000) and Wells (2005)** do not completely agree on the details of the **Lingua Franca Core**.

19) **EFL (English as a Foreign Language)**

20) **Narrow listening** means that learners focus on one topic.

21) **Conceptualization** is a speaker's mental planning process to determine what he or she intends to say.

22) **assessee** is someone who is being **assessed**.

23) hypothesized that **teachers** have the greatest influence on the quality and quantity of L2 vocabulary learnt by EFL learners.

24) **extensive reading and extensive viewing** may be the indirect activities for vocabulary learning.

25) **Webb and Chang (2012)** highlighted the need to focus on the high-frequency words specifically those in the first and second **1000-word** families.

26) The learning of pronunciation should also incorporate advanced **technology**.

27) Spoken language is **syntactically** simpler than written language.

28) While teaching vocabulary, teachers are advised to avoid teaching all the jargons related to **phonetics and phonology**.

29) **the lexeme**, which is the **phonological form associated** with the lemma.

30) Teacher Education curricula can be broken down into **four** major areas.

31) **the lemma**, which contains **conceptual, semantic, syntactic and pragmatic information.**

32) **Williams (1998) believes** English teachers should be trained to construct and mark students' papers because assessing student papers is one of the most important things the teachers do, as their decisions about grades can affect students' lives.

33) **The descriptive practices** of structural linguists suggested a number of hypotheses about language learning, and hence about language teaching as well.

34) **Web-enhanced language learning (**WELL)

35) **'Bottom-up' models** view reading as a process in which the reader has to go through the text in a more linear fashion, starting from the smallest unit in print.

36) SRL stands for (**Self-Regulated Learning**).

37) **columns** can be a good source for generating meaningful discussion in the class, since everybody will have an opinion on the personal and social issues raised by readers.

38) Extensive viewing is like **extensive reading** that too promotes repeated exposure to lexical items.

39) There are some **proficiency tests** such as IELTS, TOEFL which Pakistani students need to qualify for admission in higher education in English speaking countries.

40) **grammar translation method** is widely used in Pakistani government school.

41) **Intensive Language Course** (ILC)

42) One characteristic of English used in international settings is its **heterogeneity**.

43) The organization of the Intensive Language Course at the Free University of Berlin consists of a **sequence** of modules spread over the academic year.

44) The key assumptions of task-based instruction are summarized by **Feez**.

45) Task-Based Language Teaching proposes the notion of "task" as a central unit of planning and **teaching**.

46) assessment has **two parties** assessor and assessee.

47) ong and Crookes (1991, p. 43) claim that tasks provide a vehicle for the presentation of **appropriate target language** samples to learners.

48) **Eclectic approach** developed by the **rivers 1981**.

49) **Repeated reading** is one of the most common methods for developing **reading fluency**.

50) **Formulator** is language-dependent because it contains information about grammar.

51) **"AUDACITY."** The software is free and can help listeners adjust the speech rate.

52) The term '**evaluation'** is derived from the word **'value'** which refers to 'usefulness of something'.

53) **Building vocational knowledge and skills** is one of the major goals of the students

54) **information and communication technologies** (ICT)

55) **8000–9000** vocabulary size was found to be needed for adequate comprehension of newspaper texts.

56) It is fairly easy to use **newspaper** columns to design a classroom activity involving all **four language skills** and at different levels of linguistic and communicative challenges.

57) . Language second learning rates are **27.3%** unlike L1 vocabulary learning.

58) BIA (**Bilingual Interactive Activation**).

59) framework of conceptualization, formulation and articulation based on **first language speakers.**

60) **Curriculum** refers to all those activities in which children engage under the auspices of the school.

61) **Self-instruction** refers to situations in which learners are working without the direct control of the teacher.

62) **Self-access learning** refers to situations in which learners make use of self-access teaching material or instructional technology that is made available to them.

63) **Self-direction** refers to situations in which learners accept responsibility for all the decisions concerned with learning but not necessarily for the implementation of those decisions.

64) Practice could follow a traditional **teacher-directed presentation** of new material.

65) Language is simply seen as **less-to-more complex**.

66) According to Cunningham, there are **eight** lesson plans.

67) IDEA **(International Dialects of English Archive**)

Explain difference between Qualitative and Quantitative research?

Quantitative research involves numerical data collected through various quantitative measures and analysis of those data through statistical procedures. quantitative research deals with numerical data. It focuses on measuring and counting facts using surveys, experiments, and closed-ended questionnaires. The results of quantitative research are usually presented in the form of numbers, statistics, graphs, or charts. quantitative research is more objective and aims to provide measurable and general results.

It is controlled, experimental, objective, inferential, outcome-oriented, reliable, particularistic, hard/replicable data, generalizable, aggregate analysis;

Qualitative research consists of verbal data or data that involve texts and the analysis and interpretation of those texts. Qualitative research focuses on non-numerical data like words, ideas, and experiences. It aims to explore people's thoughts and feelings in detail, using methods such as interviews, observations, and open-ended questions. The results of qualitative research are descriptive and help to explain reasons behind certain behaviors or opinions. qualitative research is more subjective and aims to understand meanings.

It is naturalistic, observational, subjective, descriptive, process-oriented, valid, holistic, real, rich/deep data, ungeneralizable, single-case analysis.

How is extensive reading effective in vocabulary learning?

Extensive reading is highly effective in vocabulary learning because it allows learners to come across new words repeatedly and in different contexts. Reading might not be the main way to learn new words in a classroom, but it is still a helpful activity outside the class. According to Nation (2001), reading is important because it gives students meaningful language input. Many experts believe reading helps in learning vocabulary (Pigada and Schmitt 2006).

When students see the same word many times while reading, they are more likely to remember it. Nation (2001) says that repeated and spaced practice is necessary to learn vocabulary well. This means that reading longer texts can help more than short ones because words appear again and again. Extensive reading (reading a lot of material) is especially good for learning new words. It gives students many chances to see the same word, understand its use in different sentences, and practice using it correctly.

Which three points should be considered while teaching pronunciation in Pakistan?

1) Education system of Pakistan
2) L2 and ELT in Pakistan
3) Examination system in Pakistan
4) Language skills and Classroom practices

What are the classification categories of activities in CBI as given by Stoller? OR What are the Types of Learning and Teaching Activities in CBI?

There are a number of descriptions of activity types in CBI. Stoller (1997) provides a list of activities classified according to their instructional focus. The classification categories she proposes are:

1) language skills improvement
2) vocabulary building
3) discourse organization
4) communicative interaction
5) study skills

6) synthesis of content materials and grammar.

Write two reasons for preferring the passive Voice in academic writing?

Teachers often tell students to use active voice instead of passive voice. But in academic writing, using passive voice can be useful for two main reasons:

1) **Focus on the object**: Passive voice helps highlight the thing or result being discussed, rather than the person who did the action. For example, Ferris (2014) explains that using passive voice can make the experiment itself seem more important than the people who performed it.
2) **Sound more objective**: Passive voice allows writers to hide themselves in the sentence, making their statements sound more neutral and formal. This helps make the writing seem more scientific and less personal.

Three assumptions of Chapelle and Jamieson language classroom?

1) Learners need guidance in learning English.
2) There are many styles of English used for different purposes.
3) Teachers should provide guidance by selecting appropriate language and by structuring learning activities.

Three important variables affect reading or viewing in both L1 and L2 contexts?

- text characteristics
- reader/viewer characteristics
- social context.

Narrative and Expository text?

A narrative text is written to tell a story or describe a series of events. It usually includes characters, a setting, and a plot, and may involve personal experiences, emotions, and dialogues to engage the reader. Stories, novels, and fairy tales are common examples of narrative texts. If the text is a narrative, its specific characteristics include organizational structure (e.g., orientation, events description, complication, resolution, conclusion and linguistic features (dominant past tense use, descriptive adjectives, action verbs, sentence structures that are different from those used in argumentative texts, use of indirect and direct speech).

an expository text is written to explain, describe, or provide information about a topic. It focuses on facts and logical explanations rather than storytelling. Expository writing is often used in textbooks, reports, essays, and newspaper articles where the goal is to inform or educate the reader. Expository text has plainly dissimilar structure as compare to the narrative text. Its major exposition moves are compare-contrast, problem-solution, listing, cause effect, and so on.

On what two principles Content-Based Instruction (CBI) is based?

Content-Based Instruction is grounded on the following two central principles:

1) People learn a second language more successfully when they use the language as a means of acquiring information, rather than as an end in itself. This principle reflects one of the motivations for CBI noted earlier - that it leads to more effective language learning.
2) Content-Based Instruction better reflects learners' needs for learning a second language. This principle reflects the fact that many content-based programs serve to prepare ESL students for academic studies or for mainstreaming; therefore, the need to be able to access the content of

10 characteristics of IT that add value to language learning which are given by (Towndrow & Vallance)?

1) Make possible activities that could not be done as easily or at all in the print-based realm?
2) Allow the integration of digital media?
3) Allow greater flexibility as to the place and time when learning takes place?
4) Allow access to a wide range of information?
5) Allow for a focus on both the products and processes of learning?
6) Allow instructional material to be stored and recycled?
7) Encourage discussion and consultation?
8) Provide a channel for feedback and assessment?
9) Eliminate or reduce the need to duplicate previously produced materials?
10) Allow time to be saved?

What are direct and indirect strategies as given in Rebecca Oxford taxonomy of language learning?

A taxonomy that offers a comprehensive system of learning strategies is the one proposed by Rebecca Oxford (1990). Her system consists of six strategy groups, **three direct and three indirect**.

Direct strategies are those that directly involve the target language. They are composed of memory strategies for remembering and retrieving new information, cognitive strategies for understanding and producing the language, and compensation strategies for doing with the limited, still-developing proficiency in the target language. They are all considered direct strategies since they require mental processing of the target language.

Indirect strategies are those that support and manage language learning without directly involving the target language. They are composed of metacognitive strategies for coordinating the learning process, affective strategies for regulating emotions and attitudes, and social strategies for learning and working with others.

What is research?

Research is a systematic process of collecting, analyzing, and interpreting information to increase knowledge or solve a problem. It involves careful investigation to find answers to questions or discover new facts. In simple words, research means searching for information in a planned and organized way to understand something better or to find solutions. Research can be done in any field like science, education, business, or social studies. It helps people learn new things, prove ideas, or develop better ways of doing things.

What are communication strategies? Why learners use oral communication in offices?

Communication strategies are special techniques that learners need to employ **during oral communication**. They can have a social function for enhancing interaction or a psycholinguistic function that compensates inadequate vocabulary and other language-related problems (Nakatani and Goh 2007). Given the constraints of time and inadequate language mastery, learners also often need to employ communication strategies to keep the conversation going or to prevent flagging (Dörnyei, 1995).

For example, learners may use interactional strategies such as asking for clarification or repetition and comprehension checks before responding to their interlocutors to ensure that they can give a correct response and gain time while formulating a response. Less proficient learners who do not understand what they hear and are unable to express their meanings immediately can ask for assistance directly. They may also adjust their message according to their competence by reducing what they say to the minimum or steering the conversation away to a new topic which they are more familiar with.

Learners use **oral communication in offices** because it is a quick and direct way to share ideas, give instructions, and solve problems. Speaking face-to-face or over the phone allows for immediate feedback and clarification, which helps avoid misunderstandings. Oral communication also helps in building good relationships with colleagues through discussions, meetings, and teamwork. It saves time

basic types of syllabuses depending on the nature and purpose of syllabus?

1) **Product oriented syllabuses** are those in which the focus is on the knowledge and skills which learners should gain as a result of instructions, while process syllabuses are those which focus on the learning experiences themselves.
2) **Process oriented**, as the name indicates, is more focused on the process than the product.

Name two absent concepts of traditional view of methods?

The two absent concepts of the traditional view of methods are:

- Learner-centeredness
- Teacher creativity

Name one main factor related to writing context texts?

The main factor related to writing context texts is the **purpose and audience** of the writing. Writers need to know why they are writing (the purpose) and who will read the text (the audience).

What are the differences between Assessment and Evaluation?

Basis for comparison	Assessment	Evaluation
Meaning	Assessment is a process of collecting, reviewing and using data, for the purpose of improvement in the current performance.	Evaluation is described as an act of passing judgment on the basis of set of standards.
Nature	Diagnostic	Judgmental
What it does?	Provides feedback on performance and areas of improvement.	Determines the extent to which objectives are achieved.
Purpose	Formative	Summative
Orientation	Process Oriented	Product Oriented
Feedback	Based on observation and positive & negative points.	Based on the level of quality as per set standard.
Relationship between parties	Reflective	Prescriptive
Criteria	Set by both the parties jointly.	Set by the evaluator.
Measurement Standards	Absolute	Comparative

How to develop a lesson plan?

There are different formats of lesson plans. But the following aspects or items are commonly found in most lesson planning:

1) Title and sub titles of the lesson,
2) Time given for the lesson,
3) List of learning resources,
4) List of specific objectives (based on Bloom's taxonomy),
5) Methodology (teaching/learning activities),
6) Strategies applied,

7) Recapitulation,
8) Self-study exercises etc.

Different scholars and teachers gave the main areas of lesson planning. Name?

1) Learners
2) Aims and objectives
3) Teacher's personal aims
4) Procedure
5) Activities

Elements of ESP Materials?

The role of materials is very crucial in designing any language instruction. There are seven key elements of ESP materials:

1) authenticity,
2) topics/themes,
3) texts and contexts,
4) knowledge and language,
5) tasks or activities,
6) representations of participants and social practices, and
7) pedagogical prompts. These elements emphasize the totality of what constitutes ESP materials.

Three main areas we need to consider for training of language teacher? OR Why Teacher Training for Language Teachers?

- Role of language teachers
- Expectations from language teachers
- Goals of language teachers

What are the tasks in VOLL?

There are a variety of tasks that support vocationally oriented language learning (VOLL), that is, English for Vocational Purposes (EVP). Three tasks are mainly suggested that ESP teachers may adopt or adapt. These tasks include:

- Vocational Vocabulary Building,
- Vocational Knowledge Building,
- Functional Metalanguage Analysis.

In EVP programs, teachers attempt to achieve which two goals?

- building content knowledge and skills

- developing language.

self-instruction, self-direction, self-access learning, and individualized instruction? OR a diversity of ideas learner autonomy in L2 education?

1) **Self-instruction** refers to situations in which learners are working without the direct control of the teacher.
2) **Self-direction** refers to situations in which learners accept responsibility for all the decisions concerned with learning but not necessarily for the implementation of those decisions.
3) **Self-access learning** refers to situations in which learners make use of self-access teaching material or instructional technology that is made available to them.
4) **Individualized instruction** refers to situations in which the learning process is adapted, either by the teacher or by the learner, to suit the specific characteristics of an individual learner

What kind of three variables affects reading and viewing?

Understandably, the reading or viewing act itself for meaning-making is determined and affected by at least three important variables:

- Text (including multimodal texts, images, visuals and sounds) characteristics;
- Reader/viewer characteristics;
- Social context.

Write a short note on SLEP?

Programs for **Students with Limited English Proficiency (SLEP)** are governmentally mandated programs to serve especially those children whose parents might be served by the on-arrival programs, but more generally designed to provide in-class or pullout instruction for any school-age children whose language competence is insufficient to participate fully in normal school instruction. Early versions of such programs were largely grammar-based. More recent SLEP programs focus on giving students the language and other skills needed to enter the regular school curriculum. Such skills often involve learning how to carry out academic tasks and understand academic content through a second language.

types of speaking tasks?

There are broadly three types of speaking tasks that encourage genuine communication among learners:

1) communication-gap tasks
2) discussion tasks

3) monologic tasks

Monologic tasks?

Monologic tasks are speaking activities where one person shares ideas, information, or opinions with others. For example, students may give a speech, tell a story, or present a report. They speak for a longer time without being interrupted.

For example: Sometimes, students are asked to speak without preparing (spontaneous talk), and other times, they can prepare and practice first. These tasks can be done in front of the whole class, but it's better to do them in small groups. Small groups make students feel less nervous and give a chance for classmates to ask questions and give feedback.

Explain Contexts of EIL communication?

Contexts of EIL communication which can be used to design spoken activities:

1) a foreign visitor seeking information/directions/assistance from a local resident in a non-English speaking country
2) a foreign visitor giving directions to a local taxi driver in a non-English speaking country
3) a foreign resident seeking and giving information to a local official in a non-English-speaking country
4) travelers from different countries interacting at an airport/on a plane/on a train
5) business men from different countries negotiating a contract
6) a foreign visitor/resident consulting a local doctor in a non-English speaking country
7) sports fans/experts/commentators communicating at an international sports event
8) delegates at an international conference discussing a presentation
9) travelers booking flights, hotels, restaurants etc. on the phone, Skype or internet
10) traveler's communicating about arrangements for meetings, travel, conferences etc. by e-mail

Explain Five strategies in EFL?

The following strategies, adapted from Lin and Chanturia (2014) may guide EFL learners:

1) **Repeated viewing:** Repeated viewing leads to repeated encounters with a vocabulary item. There is no maximum number of times that a learner can watch a given episode
2) **Training on contextual vocabulary learning skills**: This will help learners acquire implicitly from watching television;
3) **Programme selection**: While learners' individual interests should be prioritized, Lin (2014) argues that programmes should be chosen based on the extent to which they reflect real language use. Lin (2014) found that television programmes in the factual,

drama and comedy categories were more representative of everyday English than programmes in the music, learning and religion categories:

4) **Narrow viewing:** Viewing programmes on the same or similar theme, which is more likely to provide multiple repetitions of vocabulary items and may help learners, accumulate vocabulary on a particular topic (Rodgers & Webb 2011)
5) **Subtitles:** These can be used in the same language as the programme (intralingual subtitles), or in another language, such as learners' L1 (interlingual subtitles).

What is the aim of VOLL program?

A VOLL program aims to provide students with an English course integrated with vocational content. This vocational content is a starting point for designing English language programs based on vocational themes, tasks, and language. The **aim of VOLL (Vocationally Oriented Language Learning) program** is to teach language skills that are directly useful in specific jobs or professional situations. It focuses on helping learners use the language for practical work-related purposes, such as communicating with clients, writing reports, handling telephone calls, or understanding technical documents.

What are the functions of a Lesson Plan?

1) A lesson plan is designed to communicate with the teacher.
2) It functions as a guide for the teacher.
3) It provides a map for organizing teacher's materials.
4) It provides a road map to the teacher to help students achieve their learning outcomes.
5) A lesson plan enables a teacher to set objectives clearly.
6) It provides a statement of purpose for the whole lesson. An objective statement itself should answer what students will be able to do by the end of the lesson. The objective/s drive the whole lesson.
7) It enables the teacher to carefully design the lesson according to the skill level of the learners.
8) It gives a kind of consciousness on what information/ knowledge the teacher wishes to impart and how to impart that.

Daily lesson plan?

A daily lesson plan is designed by a teacher to follow written guidelines related to teaching/learning. The details may vary from subject to subject; and lesson to lesson. A **Daily Lesson Plan** is a detailed guide prepared by a teacher for conducting a single class session. It helps organize what will be taught, how it will be taught, and how much time each activity will take. A good daily lesson plan ensures that the lesson runs smoothly and the teaching objectives are achieved.

Stages of Theory-based listening?

- pre-listening
- while-listening
- post-listening

Which teaching method is used in Pakistani elite school?

In Pakistani elite schools, the most commonly used teaching method is the **Communicative Language Teaching (CLT) method**. This method focuses on developing students' communication skills, encouraging them to use English in real-life situations. Teachers in elite schools often emphasize speaking, listening, reading, and writing activities that promote fluency rather than just grammar accuracy.

What is Content-Based Instruction (CBI)?

Content-Based Instruction (CBI) refers to an approach to second language teaching in which teaching is organized around the content or information that students will acquire, rather than around a linguistic or other type of syllabus. Krahnke offers the following definition: It is the teaching of content or information in the language being learned with little or no direct or explicit effort to teach the language separately from the content being taught.

Assumptions of content-based instructions?

1) Language Is Text and Discourse-Based
2) Language Use Draws on Integrated Skills
3) Language is Purposeful
4) Theory of Learning
5) Students Learn Best When Instruction Addresses Students' Needs
6) it seeks to build on students' knowledge and previous experience.

Tomlinson (2012) defines an authentic task?

Tomlinson (2012) defines an authentic task as “one which involves the learners in communicating to achieve an outcome, rather than to practice the language”. Authentic tasks can be realistic and they replicate in the classroom with real communicative demands. What is needed when developing materials for learners of English as an International Language (EIL) is an inventory of typical contexts of communication for users of EIL (Tomlinson 2006, p. 139) and an inventory of the key skills and sub-skills needed by users of EIL. Then, authentic tasks can be developed to facilitate the development of relevant skills and of pragmatic EIL competence.

The personal-response?

The personal-response type adds a learner-focused dimension to the assessment process by getting students to use the language to create meanings personally important to them, by getting

them personally involved in the assessment process, and/or by simulating authentic language use. Assessment in this category is necessarily integrated into the teaching/learning curriculum and can be used to examine the learning processes that are going on. All of which helps provide positive wash back effects on the students and their learning.

4 Distinctive sub-process in writing by Patridge?

Paltridge identifies four distinct sub-processes in writing.

1) **First, in the conceptualizing stage**, writers generate and select ideas that can be used in their writing, and then organize the ideas in an ordered way (e.g., an essay must have an introduction, body, and a conclusion).
2) The **second sub-process is called formulating**, putting ideas into sentences.
3) The **third sub-process is revising**, where writers rewrite and improve the essays. The revisions can be related to the content, grammar, and mechanics.
4) The **fourth sub-process is reading**. Writers read the essay's instruction and gather information for the essay topic. They are read their writing to make sure that they are answering the essay's prompts.

What are the essential skills for any CBI instructor by Stryker and Leaver?

1) Varying the format of classroom instruction
2) Using group work and team-building techniques
3) Organizing jigsaw reading arrangements
4) Defining the background knowledge and language skills required for student success
5) Helping the students develop coping strategies
6) Using process approaches to writing
7) Using appropriate error correction techniques
8) Developing and maintaining high levels of student esteem

Difference b/w communication-gap task and discussion task?

Communication-Gap Task:

- Involves a situation where one student has information that the other does not.
- The goal is to exchange information to complete a task.
- Focuses on **accuracy** and **information exchange**.
- **Example:** One student has a map, and the other gives directions.

- There are many forms of 'gaps' in communication-gap tasks and these include missing information or details which one learner will have to describe, narrate or explain to their partner.

In comparison, **discussion tasks** create an even more authentic context for speaking and interaction because learners share their personal views with one another. When they have to discuss an open or controversial topic, for example, learners can draw on their own background knowledge, experience and beliefs. When a consensus or solution is required, they will have to negotiate with one another for an outcome that everyone can agree on. Sometimes, group discussions can also occur through simulations, which are classroom activities that reproduce or create a situation that is close to real life concerns. In simulations, learners are given scenarios in which they take on a role, such as a doctor, a Member of Parliament, a school counselor, and a parent to discuss an issue with others taking on other roles.

purpose of ESP?

The **purpose of ESP (English for Specific Purposes)** is to teach English that is tailored to the specific needs, goals, and fields of the learners. ESP focuses on helping learners use English effectively in their **academic, professional, or occupational contexts**, such as business, medicine, engineering, or tourism. Instead of general English, ESP teaches the vocabulary, skills, and communication styles that are directly useful in the learner's area of study or work. The main aim is to make language learning **relevant, goal-oriented, and practical** for real-life use.

What are the eight lesson plan according to Cunningham?

According to Cunningham, there are eight lesson plan phases to provide opportunities for teachers to recognize and correct students' misconceptions while extending understanding for future lessons. These phases are:

1) Introduction,
2) Foundation,
3) Brain Activation,
4) Body of New Information,
5) Clarification,
6) Practice and Review,
7) Independent Practice
8) Closure.

what does conference assessment requires teachers to do?

Conference assessment usually involves teachers meeting with single student or small groups of students and going over various language points that need review or practice (Brown & Hudson 2002, p. 78–81). Teachers can use conference assessment to elicit and give feedback on specific

skills, tasks, functions, and grammar points that students need to review and practice. Teachers can also use conferences to help students improve their self-images. Such assessment can also help students to understand their own learning processes and strategies. In short, conferences can be used to inform, observe, mold, and gather further information about students.

Write a short note on EVP? vocational English for specific language?

In the context of vocational education both at secondary level (e.g., technical schools) and higher education (e.g., polytechnics), students are commonly placed into particular vocational areas, such as hotel hospitality, accounting, tourism management, and computer engineering. For this reason, students have to experience texts, which are relevant to their vocational knowledge and skills.

English for vocational purposes (EVP) is defined as a program established in both the secondary education and tertiary education sectors, which equips students with English competence that supports their vocational expertise. The role of English as a medium of vocational communication helps students to understand their vocational content, build and develop their vocational knowledge, communicate their vocational expertise, perform specialist tasks, and develop their disciplinary language (Widodo 2015). Drawing on Basturkmen's (2010) classification of ESP, EVP can be designed from wide-angled (English for General Vocational Purposes) and narrow-angled (English for Specific Vocational Purposes) perspectives (Widodo 2014). English for tourism can be classified as English for General Vocational Purposes. Framed in this general vocation, English for tourism has different branches, such as English for Hotel and Restaurant Workers, English for Hotel Receptionists, English for Tour Guides, English for Hotel Management, and Travel English. This specification is tailored to meet students' target vocational areas.

Write down ten principles put forward by Day and Bamford (2002) for an extensive reading approach?

Day and Bamford (2002) put forward ten principles for an extensive reading approach that deal with the nature, conditions and methodologies necessary for its implementation and success:

1) The reading material is easy
2) A variety of reading material on a wide range of topics must be available;
3) Learners choose what they want to read;
4) Learners read as much as possible (i.e., multiple encounters with a new word are necessary; Nation and Wang (1999) suggest that learners need to read about one book per week in order to meet repetitions of a new word soon enough to reinforce the previous meeting);
5) The purpose of reading is usually related to pleasure, information, and general understanding;
6) Reading is its own reward;

7) Reading speed is usually faster rather than slower;
8) Reading is individual and silent;
9) Teachers orient and guide learners;
10) The teacher is a role model of a reader.

what role cohesive devices and meta discourse markers play in making text coherent. Give examples?

Cohesive devices help establish relationships between different sentences.

Examples of cohesive devices include pronouns, conjunctions, repetition, superordinate/hyponymy (e.g., animals/cats), and synonyms/antonyms.

Another feature that can used to develop coherence in writing is **meta-discourse markers**, which some students commonly confuse with cohesive devices. Meta discourse markers are used to help readers organize, interpret, and evaluate information.

Examples of meta-discourse markers include logical connectives (e.g., therefore, but), sequencers (e.g., firstly, secondly, finally), certainty markers (e.g., certainly, no doubt), and hedges (e.g., can, may, it could be the case that).

Describe features that can used to develop coherence in writing?

It has five common features:

1) Macro-structure,
2) information structure,
3) proposition development,
4) cohesive devices
5) meta-discourse markers

Explain Macro-structure, information structure, proposition development?

Macrostructure is about the outline of a text.

For example, the outline of a complaint letter is situation-problem-solution-evaluation. The outline of a story is onset complication- resolution.

Information structure is about presenting old (given) information before introducing new information.

For example, teachers can show two sentences to students: (a) Peter has two children. (b) They are John and Mary. In this example, the writer should present the sentence with "two children" (given information) before introducing "John and Mary" (new information) to refer to the "two children."

Proposition development can be challenging too many ESL students, as they tend to state the proposition without elaboration of ideas.

For example, "Free public transport is good to the residents." This statement is a proposition without elaboration of ideas. Student writers are advised to add support to the statement such as "With money saved on transport, residents can now spend more money on other goods and services."

What are the three stages of teachers' education?

Teacher education is often divided into these stages

- **initial teacher training** / education (a pre-service course before entering the classroom as a fully responsible teacher);
- **induction** (the process of providing training and support during the first few years of teaching or the first year in a particularschool);
- **Teacher development** or continuing professional development (CPD) (an in-service process for practicing teachers).

What are the degrees of Learner Autonomy?

The teachers and learners face a challenge to determine the degree of appropriate autonomy for their specific learning and teaching context. Several researchers have considered the issue of the degree of autonomy conferred to the learner. Generally, they all advocate a gradual and guided introduction of autonomy over pedagogic choices related to the aims, outcomes, tasks, and materials of learning and teaching**. At the initial stage of autonomy**, the emphasis is simply on raising the learner's awareness of the reasons behind the teacher's choice of goals, tasks, and materials. **At the intermediate stage**, the emphasis is on allowing the learner to choose from a range of options given by the teacher. **Finally, at the advanced stage**, the emphasis is on learner determination of his/her goals, tasks, and materials. It certainly makes sense to start with a modest beginning and gradually move toward greater challenges. However, it would be a mistake to try to correlate the initial, intermediate, and advanced stages of autonomy. In fact, teachers and learners can follow different stages of autonomy depending on the linguistic and communicative demands of a particular task in a class.

What is the role of digital media in the EIL Classroom?

Digital media offer a number of ways to enhance materials development and learner feedback across the traditional skills (for an extended discussion, see Levy, 2009). Chun (2006) reviewed a number of technologies available to support reading in a second language, some of which are available non-commercially such as electronic and online dictionaries, hyperlinks to vocabulary words that are embedded within many online texts, or the use of the Internet to obtain a wider

range of sources. She also points towards software that can provide annotations through multimedia and promote word recognition.

Digital media offer many tools to help with teaching formal writing skills in classrooms. Teachers can use online grammar websites like the Purdue OWL or create their own exercises using free software like Hot Potatoes. Word processors with features like track changes and comments are useful for giving feedback. Automated writing tools also give quick, personalized feedback to help students improve their writing. However, these tools often work best with specific types of writing and may be more or less useful depending on how they are used in teaching.

What is a Curriculum?

- Curriculum refers to all those activities in which children engage under the auspices of the school. This includes not only what pupils learn, but how they learn it, how teachers help them learn, using what supporting materials, styles and methods of assessment, and in what kind of facilities.
- Curriculum is a theoretical document and refers to the programme of studies in an educational system or institution.
- Curriculum deals with the abstract general goals of education which reflect the overall educational and cultural philosophy of a country, national and political trends as well as a theoretical orientation to language and language learning. • A curriculum provides the overall rationale for educating students.

Curriculum vs. Syllabus?

A curriculum is concerned with making general statements about language learning, learning purpose, and experience, and the relationship between teachers and learners. A syllabus is more localized and is based on the accounts and records of what actually happens at the classroom level as teachers and students apply a curriculum to their situation.

Why L2 vocabulary learning progress is often slow and uneven?

L2 vocabulary learning progress is often slow and uneven. This is due to a number of inter-related factors, such as insufficient input, lack of opportunities to use the language outside the classroom (insufficient output), teaching methods used (communicative language teaching vs. grammar-translation method), amount of time dedicated to the English language in general, amount of time dedicated to vocabulary learning in particular, and so on

EFL learning?

EFL stands for **English as a Foreign Language**.

It refers to the learning or teaching of English in a country where English is **not the native or official language**. In EFL settings, learners usually study English in schools or institutes, but they do not use it in their daily lives outside the classroom.

Example: A Pakistani student learning English in school or a language institute is an EFL learner because English is not used in everyday conversation around them.

Difference from ESL:

- **EFL** = Learning English in a **non-English-speaking country**.
- **ESL (English as a Second Language)** = Learning English in an **English-speaking country**, like the UK or USA.

Guidance for EFL?

Guidance for EFL learners means giving help to students who are learning English in a country where English is not spoken every day. To learn well, they should start with a clear goal—why they are learning English, like for exams, jobs, or travel. They should practice all four skills: listening, speaking, reading, and writing. Watching English movies, listening to songs, and reading simple books can help. Speaking English daily, even with friends or alone, builds confidence. Using mobile apps or online videos also makes learning easier and fun. Learners should write new words in a notebook and try to use them in sentences. Making mistakes is normal, and they should not feel bad—just learn from them. Joining an English class or group is helpful. Practicing every day, even for a short time, is the key to success. Asking teachers or friends for feedback helps improve faster.

Future Directions in LTM?

1) Digital Media and EIL Classroom: Present and Future
2) Global Literacy: EIL Classrooms and World
3) Learner Autonomy
4) Future of Assessment
5) Teacher Training in Future
6) Research in Language Teaching and Future

What is task repetition?

Task repetition is the repeated use of the same or similar communication task or discourse sequences by learners with the same or different people. Research show that when students repeat a speaking task, their speech becomes more accurate, natural, and better organized (Bygate & Samuda, 2005). When they present to new audiences, they use better vocabulary, more word choices, and improve their grammar and pronunciation (Lynch & Maclean, 2000, 2001).

Repeating a task helps students focus better because they don't have to worry about everything at once. For example, when a grammar-focused activity is added, students can pay more attention to grammar the second time they do the task (Hawkes, 2012).

Brief note on "issues of linguistic identity and power" in Pakistani bilingual context?

The issues of language and power run as a common thread throughout the history of Pakistan. The child learns his/her first language at home and as the child goes to scholl he has exposed to Urdu language and then he has introduced with English language at grade six in government institutions. Whereas, at private sector school he has made to learn English from grade one. The complexity is added with code switching and code mixing where the speakers mix the words of their local language or Urdu in teaching or learning of English. Keeping in mind all the scenario of bilingualism, the Grammar translation Method is widely used to teach English in Pakistan.

Elaborate Learner Autonomy in Pakistani context?

We need to consider the Pakistani context from following perspectives:

- Pakistani education system
- Large classes
- Teacher centered classes
- Lack of teacher training
- Socio-cultural factors

Five teacher training factors?

1) Teacher Cognition
2) Learner Perception
3) Societal Needs
4) Cultural Contexts
5) Political Exigencies
6) Economic Imperatives

Explain Skill separation?

Separating language skills is an old idea that doesn't have strong evidence or experience to support it. It is based on a particular belief in language, language learning, and language teaching. This idea comes from older beliefs about how language is learned and taught. In the 1950s and 60s, before the communicative method became popular, the audio-lingual method was used. People who supported this method thought language was mainly about listening and speaking. They focused more on grammar rules than on how people actually use language to communicate.

Because of this thinking, they separated the four language skills (listening, speaking, reading, and writing) and followed a strict order: first listening, then speaking, then reading, and finally writing. They believed this order was natural because children learn their first language in this way. However, they ignored the fact that learning a second or third language as an adult is very different from how children learn their first language.

They also divided the skills into **two types:**

- **Active skills** (speaking and writing)
- **Passive skills** (listening and reading)

But this was not correct. Listening and reading are not passive because they require focus and thinking to understand the meaning. So, the terms were later changed to:

- **Productive skills** (speaking and writing)
- **Receptive skills** (listening and reading)

Now, experts agree that reading and listening need just as much mental effort as speaking and writing. In fact, these simple labels (like encode/decode or sender/receiver) do not show the real nature of communication, which is more about working together to understand and create meaning.

What is Teacher Training and its significance?

Teacher training refers to the policies, procedures, and provision designed to equip teachers with the knowledge, attitudes, behaviors, and skills they require to perform their tasks effectively in the classroom, school, and wider community.

Sometimes the term **Teacher education** is used instead. In fact, there is a longstanding and ongoing debate about the most appropriate term to describe these activities. The term 'teacher training' (which may give the impression that the activity involves training staff to undertake relatively routine tasks) seems to be losing ground, at least in the U.S., to 'teacher education' (with its connotation of preparing staff for a professional role as a reflective practitioner).

Significance:

Teachers play a crucial role in supporting the learning experience of young people and adult learners. They are key players in how education systems evolve and in the implementation of the reforms which can make the European Union the highest performing knowledge-driven economy in the world. Their profession, which is inspired by values of inclusiveness and the need to nurture the potential of all learners, has a strong influence on society and plays a vital role in advancing human potential and shaping future generations.

Write down four major categories of team performance function in TBLT?

Four major categories of team performance function were recognized:

1) **orientation functions** (processes for generating and distributing information necessary to task accomplishment to team members)
2) **organizational functions** (processes necessary for members to coordinate actions necessary for task performance)
3) **adaptation functions** (processes occurring as team members adapt their performance to each other to complete the task).
4) **motivational functions** (defining team objectives and "energizing the group" to complete the task)

Difference between explanatory and exploratory research?

Exploratory research is conducted when the researcher has little or no knowledge about a problem. Its main purpose is to explore new areas, gather preliminary information, and identify key variables, questions, or issues that need further investigation. It is usually qualitative and helps in forming hypotheses. Exploratory research aims to discover ideas or to understand the phenomenon by attempting to generate new perspectives or hypothesis from the data.

explanatory research is done to explain the relationship between variables. It investigates the causes behind a phenomenon and answers **"why" or "how"** questions. This type of research is mostly quantitative and is used to test hypotheses or theories. Its aims to provide explanations for the relationship among variables by identifying the causes

In short, exploratory research helps in understanding the problem, while explanatory research helps in understanding the reasons behind it.

Explain Repeated Reading (RR)?

The use and impact of RR (Samuels 1979) in second and foreign language vocabulary learning has been studied (see Gorsuch and Taguchi 2008). In RR, students are told to do repeated reading and pay attention to words that they need to know more in terms of morphological features and semantic taxonomies. They re-read a relatively easy and short text four times or more times, until they can read at a word per minute (wpm) level (e.g., 150 words per minute, Nation 2008). Two types of RR include unassisted RR (without an audio model) and assisted RR (with an audio model). The choice of either unassisted or assisted RR depends upon students' current language ability. For low proficient students, assisted RR is a useful task to help them build their vocabulary knowledge.

Difference between traditional and performance-based tests?

Puppin (2007) argues that **traditional tests** like Board examinations are one-shot tests, based on textbooks, that give inauthentic and de-contextualized testing tasks, have subjective grading and correction and lead to negative wash back. **Its examples** are MCQs, T/F and fill in the blanks. On the other hand, **performance-based testing** is **continuous** assessment, has contextualized test tasks and standardized scoring criteria (Davies, 1990). **Its example** is performance-based English test. McNamara (1996) also believes that traditional tests do not contribute to students' learning in a positive way. Bailey (1998) suggests that in contrast to traditional tests, performance tests are designed with a special care to present real life tasks which test learners' sociolinguistic ability and competence to ensure their progress in language.

Abbreviation of PPP?

Presentation, Practice, Production.

Three distinct stages of 'production of speech' as prescribed by levelt (1993) in his SP Model? OR names in Levelt's Model?

- The Conceptualizer
- the Formulator
- Articulator.

What is A Dynamic Model of The Multilingual Mental Lexicon? OR Explain formulator?

Levelt's model is geared towards monolingual speakers, so the question arises how it may account for a multilingual speaker's language processing. Different attempts have been made to adjust in this context. For example, DeBot (1992) argues that the **Conceptualizer** is most likely to be language-independent, whereas the **Formulator** is language-dependent because it contains information about grammar. The **formulator** is the component of the speech production process that **converts a speaker's intended message (the preverbal message) into a grammatically and phonologically correct sentence**.

However, selection of the words from the right language requires the inclusion of language-related information in the preverbal message (DeBot, 2002). As the lexicon plays a central role in language processing, we will discuss these and other matters from the perspective of the multilingual mental lexicon. For these purposes, three questions are most relevant:

- Is lexical information stored in one big lexicon containing all the words of all the languages, or the three separate lexicons for different languages?
- Can languages be switched on or off to achieve accurate processing?
- How can languages be kept apart in speech production?

What is editing in writing?

Careful editing is very important because a well-written essay gives a good impression and shows the writer is skilled. Writing experts (like Ferris, 2014) suggest helpful tips to improve editing and make writing better.

1) **Finish writing early** instead of waiting until the last moment. Good writers know that editing takes time, so they plan for it.

2) **Read your writing out loud.** This helps you find mistakes like missing words or repeated ideas. When you hear your own writing, it's easier to notice bad or unclear sentences.

3) **Use the editing tools in a word processor** (like Microsoft Word or Google Docs). These tools can catch spelling, grammar, and typing mistakes. If you are unsure about a correction, check a dictionary or another reliable source.

4) **Keep a record of your common mistakes.** Write down the errors you often make in a notebook. Try to fix a few types of mistakes at a time and review grammar rules when needed. Don't try to fix everything at once—it can feel too much.

Teacher-designed practice assessment?

A teacher-designed practice assessment is a type of informal test or activity **created by the teacher** to help students practice and prepare for actual assessments. It is not part of official grading but is used to evaluate learning progress, identify weak areas, and give feedback.

📌 **Example:** After teaching a lesson on **past tense verbs**, a teacher may design a short **worksheet with sentences** where students have to fill in the blanks using correct past tense forms. This tells the teacher if the class understood the topic.

Three Communication Channels?

1) Verbal Communication 📢
2) Written Communication 📝
3) Non-verbal Communication 👩👨
4) Visual Communication 🎧
5) Digital/Multimedia Communication 💻

Abbreviations of (ESP, EVP, VOLL, CLT, CLIL, CBI)?

ESP: English for Specific Purposes

EVP: English for Vocational Purposes

VOLL: Vocationally Oriented Language Learning

CLT: Communicative Language Teaching

CLIL: Content and Language Integrated Learning

CBI: Content-Based Instruction

What are the key assumptions of task-based instruction by Feez (1998, p. 17)?

The key assumptions of task-based instruction are summarized by Feez are

- The focus is on process rather than product.
- Basic elements are purposeful activities and tasks that emphasize communication and meaning.
- Learners learn language by interacting communicatively and purposefully while engaged in the activities and tasks.
- Activities and tasks can be either: those that learners might need to achieve in real life; those that have a pedagogical purpose specific to the classroom.
- Activities and tasks of a task-based syllabus are sequenced according to difficulty.

Metacognitive strategies?

A. Centering your learning
B. Arranging and planning your learning
C. Evaluating your learning

Metacognitive strategies are strategies that involve planning for learning, thinking about the learning process as it is taking place, monitoring one's own production or comprehension, and evaluating learning after an activity is completed.

Chronologically, phase of methods in the history of LTM?

- Language Teaching Methods in Ancient Times
- LTM in Europe in Early Modern Times
- LTM in the 19th and Early to Mid-20th Century
- LTM from the Mid- to Late-20th Century

in Pakistani context factors that needs to be considered for language teaching research?

A. The ELT context of Pakistan
B. General research context of Pakistan
C. Research in SLA/ ELT and Pakistan
D. Current Practices in Pakistan
E. Role of various organizations and institutes of higher education
F. Issues and problems

Six approaches of language teaching? OR Language teaching methods names?

1) Grammar Translation Method (GTM)
2) Direct Method
3) Audio-Lingual Method
4) Communicative Language Teaching (CLT)
5) Task-Based Language Teaching (TBLT)
6) Content-Based Instruction (CBI)
7) Total Physical Response Method
8) The Silent Way Method

5 elements of communication?

- Sender (Speaker)
- Message
- Medium (Channel)
- Receiver (Listener)
- Feedback

Mobile profession?

mobility should be a central component of initial and continuing teacher education programmes. Teachers should be encouraged to participate in European projects and spend time working or studying in other European countries for professional development purposes. Those who do so should have their status recognized in the host country and their participation recognized and valued in their home country. There should also the opportunity for mobility between different levels of education and towards different professions within the education sector.

principles that demonstrate the potential of internet television?

- Learners receive extensive exposure to English;
- Learners have the opportunity to observe authentic, everyday English. This is especially important in the context of formulaic language which has been found to be particularly problematic for L2 learners (Siyanova & Schmitt 2007, 2008; Chanturia & Martinez 2015);
- Internet television facilitates contextual vocabulary acquisition.

what is note of caution in language Teaching?

Teachers who want to be observed should choose a helpful and understanding colleague as their observing partner**.** This person should have the right knowledge, skills, and attitude to watch the class and understand what happens. They should be able to give honest, kind, and fair feedback about the teacher's performance. The main job of the observer is to **understand and explain what the teacher does**, not to judge them. In simple words, the observer should act like a **supportive advisor**, not like a boss or inspector. The teacher should do their own self-evaluation by using the observer's comments as **helpful advice**, not as a final judgment.

Enlist and describe three technologies that are non-commercially in secondary education learning?

1) Electronic and Online Dictionaries

- These are freely available tools that help learners understand word meanings while reading texts in a second language.
- They support independent vocabulary learning and improve reading comprehension.

2) Hyperlinks to Vocabulary Words in Online Texts

- Many online reading platforms and websites include embedded hyperlinks that link difficult words to their definitions.
- This helps learners instantly access explanations, promoting word recognition and comprehension during reading.

The Australian 'teaching and learning cycle' stages?

The Australian 'teaching and learning cycle' for genre instruction outlines the teaching of writing in three distinct stages:

- modeling,
- joint construction of text
- independent construction of text

How to develop a lesson plan?

There are different formats of lesson plans. But the following aspects or items are commonly found in most lesson planning:

- Title and sub titles of the lesson,
- Time given for the lesson,
- List of learning resources,
- List of specific objectives (based on Bloom's taxonomy),

- Methodology (teaching/learning activities),
- Strategies applied,
- Recapitulation,
- Self-study exercises etc.

Metacognition Enhancement?

Flavell (1976) described that metacognition is an individual's ability to consider about his/her own thinking and learning. It encompasses knowledge of one's own learning (person knowledge), the nature and demands of learning tasks (task knowledge) and how to approach these tasks (strategy knowledge), and the actual use of strategies for problem-solving as well as monitoring, regulating and orchestrating thinking and learning processes. The role of metacognition in learning has been discussed extensively in educational psychology. In L2 speaking, it has been examined specifically in two areas. The first is the use of communication strategies as previously explained and the other is the development of learners' metacognition about speaking through awareness-raising and strategy instruction activities (Goh & Burns, 2012). A recent study reported that a group of learners' metacognitive knowledge about speaking improved substantially when they were given the Common European Framework of Reference (CEFR) level descriptors for speaking to support their learning (Glover, 2011).

Stages of lesson planning?

1) Setting Objectives
2) Selecting Content
3) Choosing Teaching Aids and Materials
4) Deciding on Teaching Methods and Procedures
5) Assessment and Evaluation
6) Reviewing and Reflecting

Self / peer – assessment?

Self / peer - assessment type involves students scoring or rating their own work or their peers' work (Brown and Hudson 2002, p. 83–86). Such assessment can take less time than teacher scoring if well organized. It also combines well with performance, conference, or portfolio assessment. Since self/peer assessment involves students directly and intimately in the assessment process, it helps them understand that process and encourages student autonomy and motivation.

Receptive and productive skills?

- Productive skills (**speaking and writing**) which involve producing and expressing language.

- Receptive skills (**listening and reading**) which involve receiving and understanding language input

cross- sectional and longitudinal studies, expository studies?

Cross-sectional studies involve data collected at a particular point of time or during short periods of time.

Longitudinal studies involve data collected over an extended period of time with the aim of describing or tracking development or change over time.

An expository study is a type of research that aims to explain, describe, or clarify a concept or idea using facts, logic, and examples—not arguments or opinions.

Significance of Assessment?

- Measures Learning Progress
- Guides Instruction
- Motivates Students
- Identifies Strengths and Weaknesses
- Supports Feedback
- Helps in Certification and Placement

Characteristics of learners of English as a lingua franca?

Learners of English as a lingua franca (ELF) are individuals who use English mainly to communicate with speakers of other languages, not necessarily with native English speakers. These learners often come from diverse linguistic and cultural backgrounds. A key characteristic of ELF learners is that their main focus is on **effective communication rather than native-like accuracy**. They tend to develop **flexible language use**, adopting different accents, vocabulary, and expressions depending on the situation and audience. ELF learners are also typically **highly aware of intercultural communication**, as they use English in global or international contexts such as business, education, and travel. They value **mutual understanding and clarity** over strict grammatical correctness, and they often show **creativity and adaptability** in their language use.

Listening comprehension?

Listening comprehension is the ability to **understand spoken language**. It involves not just hearing words but also **processing, interpreting, and making meaning** from what is heard. In an English as a Foreign Language (EFL) classroom, listening comprehension is a crucial receptive skill that helps learners understand native and non-native speakers in real-life situations. It includes recognizing sounds, understanding vocabulary and grammar, identifying the speaker's tone, and grasping the main ideas and details of a conversation or speech.

Developing listening comprehension improves students' **overall communication skills**, builds confidence, and supports other language areas like speaking and pronunciation. Teachers often use audio recordings, videos, dialogues, and real-life listening tasks to improve this skill in learners.

Three main areas we need to consider for training of language teacher?

1) mentoring: the allocation to each beginning teacher of an experienced teacher, specifically trained as a mentor; the mentor may provide emotional and professional support and guidance; in many U.S. states, induction is limited to the provision of a mentor.
2) a peer network: for mutual support but also for peer learning.
3) input from educational experts (e.g. to help the beginning teacher relate what she learned in college with classroom reality).
4) support for the process of self-reflection that all teachers engage in (e.g. through the keeping of a journal).

Learner characteristics?

Learner characteristics are the qualities, traits, and abilities that students bring to the learning process. These can affect how well they learn a language.

Some common learner characteristics are:

- Age
- Motivation
- Learning style
- Language background
- Personality
- Cognitive ability

On which factors the difficulty of a task depends?

The difficulty of a task depends on a range of factors including the previous experience of the learner, the complexity of the task, the language required to undertake the task, and the degree of support available.

Eclectic Approach?

- Main proponent: **Rivers 1981**
- Eclectic approach is a method of language education that combines various approaches and methodologies to teach language depending on the aims of the lesson and the abilities of the learners.

The main factor on which content-based instruction depends?

The main factor on which Content-Based Instruction (CBI) depends is the **selection of meaningful, relevant content** that aligns with learners' needs and interests—whether academic, professional, or personal.

Characteristics of listening?

Listening is an active and complex skill that involves more than just hearing sounds. It requires the **interpretation, understanding, and processing** of spoken language in real time. One important characteristic of listening is that it is **receptive**—learners receive and decode language input rather than producing it. It is also **temporary and linear**, meaning that spoken language occurs over time and cannot be reviewed easily like written text. Listening often involves **processing incomplete or unclear information**, requiring learners to use **context clues, background knowledge, and prediction skills** to make meaning. Furthermore, listening can be either **extensive** (for general understanding) or **intensive** (for specific details), and it often includes **non-verbal cues** such as tone, stress, and pauses which aid comprehension.

Three main areas to consider when training a learner?

1) Cognitive Area
2) Affective Area
3) Psychomotor Area
4) Learning Activities and Procedures

Three strategies of teaching pronunciation?

- Listening and Imitation
- Phonetic Training
- Minimal Pair Drills

What is Vocabulary-Learning Programme by Nation's (2001) model?

What can help learners and teachers in the vocabulary learning quest is the development of a sound institutional programme aimed at optimizing vocabulary teaching and learning. A prominent example of such a programme is Nation's (2001) model that incorporates the vocabulary component of a language course. The main tenets and elements of this model can be summarized as follows:

1) **Establishing Goals and Needs:** While an overarching goal will, inevitably, be to increase learners' vocabulary size, more specific goals may differ from one group of learners to another.
2) **Taking into Account Environmental Factors**: Nation (2001) suggests establishing features and characteristics of the learners (e.g., Do they share the same L1?), the teachers (e.g., Are teachers well informed about teaching and learning vocabulary?), and the situation (e.g., Do L1 and L2 share cognate vocabulary?).

3) **Following Vocabulary-teaching Principles:** Nation's model has the three core principles of content and sequencing, format and presentation, and monitoring and assessment. Content and sequencing deal with the vocabulary to be learnt, its stages and means of learning.
4) **Evaluation of the Vocabulary Component of a Language Course**: The final component of the model centres on evaluating the effectiveness of the vocabulary component of a language programme. Nation (2001, 2008) provides a number of principles that can be used to achieve this aim.

Write down stages of the writing process identified by Clark and Ivanič (1991)?

Clark and Ivanič (1991) identify 16 (equally important and inter-related) stages of the writing process, involving the following:

1) **Accumulating knowledge and opinions**
   – e.g., doing the necessary reading, gathering primary data through surveys/interviews.

2) **Deciding how to take responsibility**
   – e.g., choosing whether to use first-person pronouns or passive voice to present views.

3) **Analyzing the assignment**
   – e.g., understanding the question prompt, instruction words, and purpose of the task.

4) **Planning**
   – e.g., organizing information to include in order to achieve the paper's macro-rhetorical goal.

5) **Establishing goals and purposes**
   – e.g., defining the overall goal of the essay and the objective of each paragraph.

6) **Establishing the writer identity**
   – e.g., showing commitment to a position or argument through tone and stance.

7) **Drafting**
   – e.g., putting ideas together to form a coherent argument or narrative.

8) **Considering constraints of time and space**
   – e.g., managing deadlines and staying within word limits.

9) **Formulating the writer's own ideas**
   – e.g., expressing personal opinions or original thoughts on the topic.

10) **Experiencing panic, pain, and anguish**
   – e.g., emotional challenges during the writing process.

11) Experiencing pleasure and satisfaction
– e.g., completing the assignment, gaining new insights.

12) Revising
– e.g., checking for persuasive arguments and alignment with the paper's goals.

13) Considering the reader
– e.g., anticipating reader expectations, objections, and ensuring clarity.

14) Clarifying writer commitment to his/her idea
– e.g., strengthening the stance or viewpoint.

15) Putting knowledge of the language to use
– e.g., selecting appropriate vocabulary, grammar, and style.

16) Making the copy neat
– e.g., ensuring proper formatting, presentation, and final proofing.

Elaborate the Use of Technologies to Enhance the Teaching of Writing by three stages of Australian 'teaching and learning cycle'?

The Australian 'teaching and learning cycle' for genre instruction outlines the teaching of writing in three distinct stages: modeling, joint construction of text, and independent construction of text.

At the modeling stage, teachers introduce the text type, purpose, audience, context of the text, as well as the vocabulary, grammar, and organizational structure, which are used in realizing that particular text type. For example, when teaching the genre of a complaint letter, teachers can make use of a short authentic letter from a local newspaper. Teachers can jumble the paragraphs, and then ask the students to rearrange the paragraphs and write down the proper order of a jumbled text following the situation-problem-solution- evaluation structure. Students can undertake this task individually if the class size is small, or in small groups with large class size.

After the modeling phase, teachers move on to another stage called **the joint negotiation of text**. This stage includes negotiation of ideas between teachers and students. Teachers can include activities such as class discussions and role plays, so as to help students brainstorm and gather possible ideas for writing. Using Weebly or Wikipedia, for example, teachers and students co-construct an essay in the same genre that they learned earlier in the modeling stage. Teachers may also use Google Docs http://www.google.com/docs to give students quick written feedback.

The stage of independent construction of text comes after the joint negotiation of text. Teachers should explicitly tell students the purpose of writing the particular essay, which may be neglected by some novice teachers. After brainstorming some ideas on the essay topic, students will independently compose their own essays. When the first draft is completed, students may

make use of an automated essay system (e.g., Criterion ® https://www.ets.org/criterion) to receive feedback on mechanics and grammar.

Extensive Reading?

- Extensive reading is a related concept where learners read **large amounts of material** for overall understanding and enjoyment rather than focusing on every detail.
- In research, extensive studies often involve:
  - Surveys
  - Long-term classroom observations
  - Studies across different schools or regions

How we make Classification of Research in Language Teaching? (IMP)

There are different ways of classifying research studies in terms of the type of research design used, such as descriptive, experimental and correlational studies. **Descriptive research** is to describe the phenomenon in its naturalistic context, whereas **experimental research** manipulates variables under controlled conditions. **Correctional research** examines associations between or among variables.

Studies can also be classified in terms of their data collection methods. In this respect it can be quantitative, qualitative, and mixed methods research. **Quantitative research** involves numerical data collected through various quantitative measures and analysis of those data through statistical procedures. **Qualitative research** consists of verbal data or data that involve texts and the analysis and interpretation of those texts. Mixed methods research involves a combination of both types of data. The terms qualitative and quantitative are also used to differentiate between studies in terms of their philosophical points of view with qualitative research valuing subjective judgments, whereas quantitative research stressing objectivity, control, and distance from the research.

A third way of classifying research studies is in terms of their objectives. Studies can be exploratory or explanatory in their objectives. **Exploratory research** aims to discover ideas or to understand the phenomenon by attempting to generate new perspectives or hypothesis from the data. **Explanatory research,** however, aims to provide explanations for the relationship among variables by identifying the causes.

Finally, studies can be classified in terms of the time frame for data collection. Hence, they can be either cross-sectional or longitudinal. **Cross-sectional studies** involve data collected at a particular point of time or during short periods of time. **Longitudinal studies** involve data collected over an extended period of time with the aim of describing or tracking development or change over time.

University of Berlin's modules?

The organization of the Intensive Language Course at the Free University of Berlin consists of a **sequence of modules** spread over the academic year. The topical themes of the modules are:

1) Drugs
2) Religious Persuasion
3) Microchip Technology
4) Ecology
5) Advertising
6) Alternative Energy
7) Nuclear Energy
8) Britain and the Race Question
9) Dracula in Myth, Novel
10) Native Americans Films
11) Modern Architecture
12) Professional Ethics

What are the objectives of CBI?

In CBI, language learning is typically considered incidental to the learning of content. Thus, the objectives in a typical CBI course are stated as objectives of the content course. Achievement of content course objectives is considered as necessary and sufficient evidence that language learning objectives have been achieved as well.

An example of objectives in CBI comes from the theme-based Intensive Language Course (ILC) at the Free University of Berlin. **Four objectives** were identified for its yearlong, multi-theme program. These objectives were linguistic, strategic, and cultural. Objectives were:

- to activate and develop existing English language skills
- to acquire learning skills & strategies that could be applied in future language development opportunities
- to develop general academic skills applicable to university studies in all subject areas
- to broaden students' understanding of English-speaking peoples

Note on Newspaper column?

Newspaper columns can be used as **authentic reading materials** in the ESL/EFL classroom. They help:

- Develop **reading comprehension skills**
- Expose learners to **real-life English usage**

- Improve **vocabulary**, **grammar**, and **critical thinking**
- Practice **skimming**, **scanning**, and **inferencing** skills

Explain English vocabulary knowledge and learning rates in the EFL context?

Different studies have shown that English vocabulary knowledge and learning rates in the EFL context fall short of what is considered to be a norm in the L1 context. For example, Nurweni and Read (1999) investigated the English vocabulary knowledge of 324 first-year university students in the Indonesian EFL context.

They found that after six years of formal English language instruction, on average, the learners knew 1226 English words (986 words, or just under 50 %, of the General Service List (West 1953) and 240 words, or 30 %, of the University Word List (Xue and Nation 1984)). Given that L2 learners of English are thought to require **4000– 5000 words** to be able read university level textbooks (Nation 1990), it is evident that the EFL learners in Nurweni and Read (1999) were not equipped even with the most basic vocabulary to be able to cope with university-level readings. EFL learners are expected to have the vocabulary size of a minimum of 4000 words upon entry to the university.

Webb and Chang (2012), who investigated the vocabulary knowledge of **166 EFL** learners in Taiwan over a period of five years. They measured students' vocabulary learning progress using the Vocabulary Levels Test (Schmitt et al. 2001). The data were examined according to the number of hours of English language instruction that learners had received (e.g., while one group enjoyed between 10 and 22 h of English classes per week, another group had a mere **2–6 h** of English per week). The authors found that those with less exposure to English learnt significantly fewer words (some learnt as few as 18 words in one year), while the learners with greater exposure learnt as many as 430 words in one year. **Webb and Chang (2012)** highlighted the need to focus on the high-frequency words specifically those in the first and second **1000-word families**.

Explain Pakistani Bilingual Context factors?

1) Cultural Diversity and Linguistic Diversity:

Pakistan has multiple cultures Bengali, Punjabi, Pashtuns, Sindhis and Balochis and they have their indigenous languages to which they were deeply adhered since long. In such a diverse linguistic society where more than seventy languages are spoken, Urdu serves as national language of Pakistan whereas English is functioning as official language in the country. Urdu has its roots in Persian, Arabic and various local languages.

2) Colonial Heritage:

It is another source of bilingualism in Pakistan. The influence of colonial legacy and past practices also has an impact on current language education policies.

3) National Language:

We have considered the issue of national language and regional languages in this context. Urdu while being the national language, is spoken by less than 8% of population as mother tongue, the rest of the population speaks one of the other 72 languages of Pakistan.

4) Official Language:

It is another factor which play a vital role. English is the language of elite class in Pakistan and has prestige. The power of English cannot be denied when taking about the language teaching methods in Pakistan. It is used as the official language in various institutions of the country.

5) Provincial or Regional Languages:

Research on the use of languages in Pakistani institutions reports that a large number of teachers do use local languages in their classrooms for instruction.

6) Issues of Linguistic Identity and Power

AS mentioned on pg#25

Teaching profession?

The teaching profession is considered one of the most noble and respected professions in society. It plays a vital role in shaping the minds and futures of learners. A teacher is not only responsible for delivering knowledge but also for developing students' critical thinking, character, and social values. In the field of English language teaching, a professional teacher must be skilled in using appropriate teaching strategies, classroom management techniques, and instructional materials suited to the learners' needs. The profession also carries great ethical responsibility, as the teacher influences the intellectual and emotional growth of students.

What are the six main purposes of need analysis by Richards?

1) To find out what language skills a learner needs in order to perform a particular role, such as sales managers, tour guides, or university students
2) To help determine if an existing course adequately addresses the needs of potential students
3) To determine students from a group who are in need of training at a particular language skill
4) To identify a change of direction that people in a reference group feel is important
5) To identify a gap between what students are able to do and what they need to be able to do

6) To collect information about a particular problem which learners are experiencing.

principle of Bailey?

♣ Engage all learners in the lesson.

♣ Make learners, and not the teacher, the focus of the lesson. - Provide maximum opportunities for student participation. - Develop learner responsibility.

♣ Be tolerant of learners' mistakes.

♣ Develop learners' confidence.

♣ Teach learning strategies

♣ Promote cooperation among learners.

♣ Practice both accuracy and fluency.

♣ Address learners' needs and interests.

Best of luck ☺ 🙃

Remember me in your prayers ❤
