Acronyms

Cooperative Language Learning (CLL)

Higher Education Commission (HEC)

Collaborative Learning (CL)

Strengths, weaknesses, opportunities and threats (SWOT)

Neurolinguistic Programming (NLP)

Total Physical Response (TPR)

Direct Method (DM)

Teaching English to Speakers of Other Languages (TESOL)

ESL (English as a Second Language)

EFL (English as a Foreign Language)

LTM (Language Teaching Methods)

Competency-Based Language Teaching (CBLT)

Security, attention and aggression, retention and reflection, discrimination (SARD)

Audio-Lingual Method (ALM)

English Language Teaching Reforms (ELTR)

MULTIPLE INTELLIGENCES (MI)

Competency-Based Education (CBE)

IMP MCQs

Traditional IQ or intelligence tests are based on a test called the **Stanford-Binet.**

(MI) refers to a **learner-based philosophy.**

A widely accepted view of intelligence is that intelligence – however measured and in whatever circumstance - comprises a single factor, usually called **the "g" factor**.

MI is based on the work of **Howard Gardner** of the Harvard Graduate School of Education

CBLT also shares features of the graded objectives movement that was proposed as a framework for organizing foreign language teaching in **Britain in the 1980s**.

Chomsky, **the father** of contemporary studies in syntax, has recently adopted a **"lexicon-is-prime"** position in his **Minimalist Linguistic theory**.

Hymes proposed a theory of **communicative competence** incorporating **sociocultural norms** governing language communication.

Austin's speech act theory elaborated on how language users perform speech acts such as requesting, informing, apologizing, and so forth.

The theoretical attack on audio-lingual beliefs resulted from changes in American linguistic theory in **the 1960s**.

Noam Chomsky rejected the **structuralists' approach.**

The Silent Way is the name of a method of language teaching **devised by Caleb Gattegno**.

the use of color charts and the colored Cuisenaire rods, grew out of Gattegno's previous experience as an educational designer of reading and **mathematics** programs.

Learning is facilitated **by problem solving involving** the material to be learned

SUBJECTIVE PART

three tasks of cooperative language learning?

Coelho (1992b, p. 132) describes three major kinds of cooperative learning tasks and their learning focus, each of which has many variations.

1) Team Practice from Common Input
2) Jigsaw
3) Cooperative Projects

Strengths of Grammar Translation Method?

Strengths of Grammar Translation Method include:

- Forming good academic knowledge of the target language
- Training grammar accuracy
- Developing students 'memory

Weaknesses of Grammar Translation Method?

- **Grammar–translation classes** are usually conducted in the students' native language.
- Grammar rules are learned deductively.
- Students learn grammar rules by rote.
- the lack of using language for communicative purposes
- lack of development of communicative skills
- little, if any, experience of speaking and listening

name of two school where direct method is used in past?

1) Berlitz Language Schools
2) Inlingua
3) Foreign Service Institute (FSI) of the U.S. State Department

The reasons of low proficiency in English?

- Bifurcated streams of education
- Methods' choices and SL Proficiency
- SL proficiency and difference in public and private schools
- Focus on reading and writing

- De-contextualized teaching and learning of English

strength of direct method?

Practical goals and immersion into foreign environment, together with focus on speaking and listening practice are the major strengths of the Direct Method.

In the Direct method, there is a:

1) Wide use of authentic materials.
2) Presenting language items in dialogues rather than in isolation.
3) Introducing natural order of skills presentation: listening, speaking, reading, and writing.
4) Both speech and **listening comprehensions are taught**.
5) Correct pronunciation and grammar are emphasized.
6) Students are taught from inception to ask questions as well as to answer them.

Why GTM's learners is "inefficient," "incompetent" and "tedious."?

The consequences are:

1) It doesn't sound very motivating for a learner.
2) It doesn't sound trustworthy for a teacher.
3) The mainstay of classroom materials for the grammar–translation method is the textbook.

Why NLP is developed?

Neurolinguistic Programming (NLP) refers to a **training philosophy** and a set of training techniques first developed by **John Grindler and Richard Bandler** in the mid1970s as an alternative **form of therapy**.

Grindler and Bandler developed NLP as a system of techniques that therapists could use in building rapport with clients, gathering information about their internal and external views of the world, and helping them achieve goals and bring about personal change. They sought to fill what they perceived to be a gap in psychological thinking and practice of the early 1970s by developing a series of step-by-step procedures that would enable people to improve themselves.

Define discourse?

Discourse is an instance of spoken or written language that has describable internal relationships of form and meaning (e.g., words, structures, cohesion) that relate coherently to an external communicative function or purpose and a given audience/interlocutor.

Communication goals area of savignon 5Cs?

In a recent interpretation of the learning objectives of communicative language teaching, Savignon (2002, pp. 114–115) considers the **five goal areas**, (**known as Five Cs**: **communication, cultures, connections, comparisons, and communities)** agreed upon as National Standards for Foreign Language Learning in the United States as representing a holistic, communicative approach to language learning:

1) **The communication goal area** addresses the learner's ability to use the target language to communicate thoughts, feelings, and opinions in a variety of settings;
2) **The cultures' goal area** addresses the learner's understanding of how the products and practices of a culture are reflected in the language;
3) **The connections' goal** area addresses the necessity for learners to learn to use the language as a tool to access and process information in a diversity of contexts beyond the classroom;
4) **The comparisons' goal area** is designed to foster learner insight and understanding of the nature of language and culture through a comparison of the target language and culture with the languages and cultures already familiar to them; and
5) **The communities goal** area describes learners' lifelong use of the language, in communities and contexts both within and beyond the school setting itself.

TPR's "trace theory" memory in psychology?

TPR can also be linked to the **"trace theory"** of memory in psychology (e.g., Katona 1940), which holds that the more often or the more **intensively** a memory connection is traced, the stronger the memory association will be and the more likely it will be recalled. Retracing can be **done verbally** (e.g., by rote repetition) and/or in association with motor activity. Combined tracing activities, such as verbal rehearsal accompanied by motor activity, increase the possibility of successful recall.

Total Physical Response (TPR) is a language teaching method built around the coordination of **speech and action**; it attempts to teach language through physical (motor) activity. Developed by **James Asher.**

views of language? LONG

At least **three different theoretical views** of language and the nature of language proficiency explicitly or implicitly inform current approaches and methods in language teaching.

1) **The first**, and the most traditional of the three, is **the structural view**, the view that language is a system of structurally related elements for the coding of meaning. The target of language learning is seen to be the mastery of elements of this system, which are generally defined in terms of phonological units (e.g., phonemes), grammatical units (e.g., clauses, phrases, sentences, grammatical operations).

2) **The second view** of language is the **functional view**, the view that language is a vehicle for the expression of functional meaning. The communicative movement in language teaching subscribes to this view of language. This theory emphasizes the semantic and communicative dimension rather than the grammatical characteristics of language, and leads to a specification and organization of language teaching content by categories of meaning and function rather than by elements of structure and grammar.
3) **The third view** of language can be called as the **interactional view**. It sees language as a vehicle for the realization of interpersonal relations and for the performance of social transactions between individuals. Language is seen as a tool for the creation and maintenance of **social relations**. Areas of inquiry being drawn on in the development of interactional approaches to language teaching include interaction analysis, conversation analysis, and ethnomethodology. **Interactional theories** focus on the patterns of moves, acts, negotiation, and interaction found in conversational exchanges. According to this view, Language teaching content, may be **specified and organized** by patterns of **exchange and interaction** or may be left unspecified to be shaped by the inclinations of learners as interactors. "Interaction" has been central to theories of second language learning and pedagogy since the 1980s.

Role of teacher in TPR?

The teacher plays an active and direct role in Total Physical Response. It is the teacher who decides what to teach, who models and presents the new materials, and who selects supporting materials for classroom use. Asher recommends **detailed lesson plans**: "It is wise to write out the exact utterances you will be using and especially the novel commands because the action is so fast-moving there is usually not time for you to create spontaneously"

Role of learners in TPR?

Learners in Total Physical Response have the primary roles of listener and performer. They listen attentively and respond physically to commands given by the teacher. Learners are also expected to recognize and respond to **novel combinations** of previously taught items. They are required to produce novel combinations of their own. Learners monitor and evaluate their own progress. They are encouraged to speak when they feel ready to speak - that is, when a sufficient basis in the language has been internalized.

Rapport in NLP?

Rapport is meeting others in their world, trying to understand their needs, their values and their culture and communicating in ways that are congruent with those values. You don't necessarily have to agree with their values, simply recognize that they have a right to them and work within their framework, not against it. t is one of the **four central principles** of NLP.

Four key principles of NLP?

Four key principles lie at the heart of NLP (O'Connor and McDermott 1996; Revell and Norman 1997).

1) **Outcomes:** the goals or ends. NLP claims that knowing precisely what you want helps you achieve it. This principle can be expressed as "know what you want."
2) **Rapport:** a factor that is essential for effective communication maximizing similarities and minimizing differences between people at a non-conscious level. This principle can be expressed as "Establish rapport with yourself and then with others."
3) **Sensory acuity:** noticing what another person is communicating, consciously and nonverbally. This can be expressed as "Use your senses. Look at, listen to, and feel what is actually happening."
4) **Flexibility**: doing things differently if what you are doing is not working: having a range of skills to do something else or something different. This can be expressed as "Keep changing what you do until you get what you want."

Define language in your own words?

Language is a structured system of communication that involves organized sounds, words, and rules (grammar) to express ideas, emotions, and information. It is not just a system, but also a **medium of social interaction**, **a vehicle of ideology**, and a **tool to reflect and construct human experience**.

Activities of total physical response method?

In the initial stages, learners are not required to speak, they respond physically to the commands given by the teacher. For example, if the teacher says, 'Stand up', the students stand up. As the course proceeds, the learners are encouraged to speak when they feel ready. Eventually, they respond verbally as well as physically.

- The teacher gives **imperatives** such as *"open the book," "walk to the door," "pick up the pen,"* and students act them out.
- Activities can include **role play**, **games**, and **group work** using physical actions.
- **Storytelling** is also used, where the teacher tells a story and students act out parts.

For which concept neurolinguistics programming developed?

Neurolinguistic Programming (NLP) was developed for the concept of effective communication and personal development, particularly in language learning and teaching.

Neurolinguistic Programming (NLP) was developed **as a model of communication** that explains how we process the information that comes to us from the outside world. It provides insights into how people learn and what strategies they use to motivate themselves and others.

Difference silence and repetition in silent method?

silence	repetition
Silence is used **deliberately by the teacher**.	Repetition comes **from the students**, not the teacher.
Silence is considered the best vehicle for learning, because in silence, students concentrate on the task to be accomplished and the potential means to its accomplishment.	Repetition (as opposed to silence) "consumes time and encourages the scattered mind to remain scattered"
It is a **teaching tool**, not a lack of teaching.	It is a **student tool.**

Write a note on Neurolinguistic Programming?

The **neuro part** of NLP is concerned with how we experience the world through our five senses and represent it in our minds through our neurological processes.

The linguistic part of NLP is concerned with the way the language we use shapes, as well as reflects, our experience of the world. We use language - in thought as well as in speech - to represent the world to ourselves and to embody our beliefs about the world and about life. If we change the way we speak and think about things, we can change our behavior. We can also use language to help other people who want to change.

The programming part of NLP is concerned with training ourselves to think, speak, and act in new and positive ways in order to release our potential and reach those heights of achievement which we previously only dreamt of.

NLP is a collection of techniques, patterns, and strategies for assisting effective communication, personal growth and change, and learning. It is based on a series of underlying assumptions about how the mind works and how people act and interact.

Audio-lingual Method?

The Audio-Lingual Method (ALM) is a language teaching method based on behaviorist psychology and structural linguistics, emphasizing habit formation through repetition, memorization, and drills.

Audio lingual method procedure?

Brooks enlists the following procedures that the teacher should adopt in using the Audio-lingual Method:

1) The modeling of all learning by the teacher.
2) The subordination of the mother tongue to the second language by rendering

3) English is inactive while the new language is being learned.
4) The early and continued training of the ear and tongue without recourse to graphic symbols.
5) The gradual substitution of graphic symbols for sounds after sounds is thoroughly known.

Activities of audio-lingual method?

The main activities include reading aloud dialogues, repetitions of model sentences, and drilling. Key structures from the dialogue serve as the basis for pattern drills of different kinds. Lessons in the classroom focus on the correct imitation of the teacher by the students. Not only are the students expected to produce the correct output, but attention is also paid to correct pronunciation. Although correct grammar is expected in usage, no explicit grammatical instruction is given. It is taught inductively. Furthermore, the target language is the only language to be used in the classroom.

Audio lingual method enlist 5 types of drill?

1) Single-slot substitution drill
2) Multiple-slot substitution drill
3) Backward build up (expansion) drill
4) Repetition drill
5) Chai drill
6) Substitution Drill
7) Transformation Drill
8) Question-and-Answer Drill

ELT program or Higher education program?

To understand the status and role of **ELT teachers** and their teacher training in Pakistan, we need to consider the following backdrop:

- Status of English in Pakistan
- Pakistani schools and English language
- Streams of education in Pakistan
- Higher Education: ELT and teacher training

Role of HEC:

In order to bring qualitative improvement in English Language Teaching and Learning, Higher Education Commission in **2004 launched** its exclusive language-based project titled **'English Language Teaching Reforms (ELTR)'**. This project aims at building the capacity of English

Language Teachers in higher education sector in Pakistan for effective and sustainable development. The project is part of the overall vision of prospective **plan 2020**, and pertains to human resource development in English Language Teaching and research in Higher Education. After the successful phase I, which catered **1398 teachers** of colleges and universities, the ELTR launched its **Phase II in 2010**. The initial target was of professional training of **1400 ELT** teachers through its Long- and Short-Term professional development programs.

In SARD what is stand for R and D?

R stands for retention and reflection. If the whole person is involved in the learning process, what is retained is internalized and becomes a part of the learner's new persona in the foreign language.

D denotes discrimination. This discrimination process becomes more refined and ultimately "enables the students to use the language for purposes of communication outside the classroom"

Note on Whole Language?

The term Whole Language was created in the **1980s by a group of U.S.** educators concerned with the teaching of language arts, that is, reading and writing in the native language. Whole Language instruction is a theory of language instruction that was developed to help young children learn to read, and has also been extended to middle and secondary levels and to the teaching of ESL

The Whole Language Approach emphasizes learning to read and write naturally with a focus on real communication and reading and writing for pleasure. Whole Language also views language psycholinguistically as a vehicle for internal "**interaction**," for egocentric speech, for thinking. The learning theory underlying Whole Language is in **the humanistic** and constructivist schools. The descriptions of whole language classrooms recall terms familiar to humanistic approaches to education and to language learning.

Characteristics:

1) Authentic
2) Personalized
3) self-directed
4) collaborative
5) pluralistic

The major principles:

The major principles underlying the design of Whole Language instruction are as follows:

1) the use of authentic literature rather than artificial, specially prepared texts and exercises designed to practice individual reading skills

2) a focus on real and natural events rather than on specially written stories that do not relate to the students' experience
3) the reading of real texts of high-interest, particularly literature
4) reading for the sake of comprehension and for a real purpose
5) writing for a real audience and not simply to practice writing skills
6) writing as a process through which learners explore and discover meaning
7) reading and writing in partnership with other learners
8) integration of reading, writing, and other skills

What is GTM?

the grammar–translation method is a method of teaching **foreign languages** derived from the classical (sometimes called traditional) method of **teaching Greek and Latin**. It is aimed at analyzing and studying the grammatical rules of language, usually in an order roughly matching the traditional order of the **grammar of Latin**, and then to practice manipulating grammatical structures through the means of translating both into and from the mother tongue.

Goals/Objectives of GTM?

The method has **two main goals**:

- to develop students' reading ability to a level where they can read literature in the target language
- to develop students' general mental discipline.

Benefits of discovery Learning?

The Silent Way belongs to a tradition that views learning as a **problem-solving, creative, discovering activity**, in which the learner is a principal actor rather than a bench-bound listener (Bruner 1966). Bruner discusses the benefits derived from "**discovery learning**" as follows:

- the increase in intellectual potency,
- the shift from extrinsic to intrinsic rewards,
- the learning of heuristics by discovering, and
- the aid to conserving memory

Human language well-crafted and well-organized comments?

We all know that human **language** is a well-organized and well-crafted instrument. That is to say, all the basic components of a language work in tandem in a coherent and systematic manner. They are certainly not a **random collection** of disparate units. From one perspective, a study of language is basically a study of its systems and **subsystems**. By treating language as a system, we are merely acknowledging that each unit of language, from a single sound to a complex word to a large text—spoken or written—has a character of its own, and each is, in some principled

way, delimited by and **dependent** upon its co-occurring units. As we learn from any introductory textbook in linguistics, the core of language as a system consists of the **phonological system** that deals with the **patterns of sound**, the semantic system that deals with the meaning of words, and the **syntactic system** that deals with the **rules of grammar**. For instance, at the phonological level, with regard to the pattern of English, stop consonants are distinguished from one another according to their place of articulation (bilabial, alveolar, velar) and their manner of articulation (voiceless, voiced)

In acronym SARD briefly describe each letter?

'S' stands for security. Unless learners feel secure, they will find it difficult to enter into a successful learning experience.

'A' stands for **attention and aggression.** CLL recognizes that a loss **of attention** should be taken as an indication of the learner's lack of involvement in learning. **Aggression applies** to the way in which a child, having learned something, seeks an opportunity to show his or her strength by taking over and demonstrating what has been learned, using the new knowledge.

R stands for **retention and reflection.** If the whole person is involved in the learning process, what is **retained** is internalized and becomes a part of the learner's new persona in the foreign language**. Reflection** is a consciously identified period of silence within the framework of the lesson for the student

D denotes discrimination. When learners "have retained a body of material, they are ready to sort it out and see how one thing relates to another" (La Forge 1983: 69). This **discrimination** process becomes more refined and ultimately "enables the students to use the language for **purposes of communication** outside the classroom".

Name Three Meta functions of Holliday?

From a functional perspective, Holliday sees three meta functions or macro functions of language:

1) **the ideational** (represents the individual's meaning potential and relates to the expression and experience of the concepts, processes, and objects governing the physical and natural phenomena of the world around.)
2) **the interpersonal** (deals with the individual's personal relationships with people)
3) **the textual** (refers to the linguistic realizations of the ideational and interpersonal functions enabling the individual to construct coherent texts, spoken or written)

how does James Asher creator of the Total Physical Response Method, view stress in the act of learning?

An important condition for successful language learning is the absence of stress. **First language acquisition** takes place in a stress-free environment, according to Asher; whereas the adult language learning environment often causes considerable stress and anxiety. The key to stress free learning is to tap into the **natural bio-program** for language development and thus to recapture the relaxed and pleasurable experiences that accompany first language learning. By focusing on meaning interpreted through movement, rather than on language forms studied in the **abstract,** the learner is said to be liberated from **self-conscious** and stressful situations and is able to devote full energy to learning.

Brain lateralization in total physical response?

Right- brain learning:

Asher sees Total Physical Response as directed to right brain learning, whereas most second language teaching methods are directed to **left-brain learning**. Drawing on the works by jean Piaget, Asher holds that the child language learner acquires language through motor movement - a right hemisphere activity. **Right hemisphere** activities must occur before the left hemisphere can process language for production.

Similarly, the adult should proceed to language mastery through right-hemisphere motor activities, while the left hemisphere watches and learns. When a sufficient amount of right-hemisphere learning has taken place, the left hemisphere will be **triggered** to produce language and to initiate other, more abstract language processes.

Notions of syllabuses proposed by Wilkins?

Wilkins (1972) proposed a notional/functional syllabus containing an inventory of **semantic grammatical notions** such as

1) duration
2) frequency
3) quantity
4) dimension
5) location
6) communicative functions such as greeting, warning, inviting, requesting, agreeing, and disagreeing.

How common sense and theory is related, explain with respect to the Cameron work?

it has been suggested that there is **no substantial difference** between common sense and theory, particularly **in the field of education**. Cameron et al. (1992, pp. 18–19), for instance, asserts that common sense is different from theory "only by the degree of formality and self-consciousness with which it is invoked. When someone purports to criticize or **'go beyond'** common sense,

they are not **putting theory** where previously there was none, but replacing one theory with another."

Write down names of 10 key aspects of designing activities in TPR method?

1) Imperative Commands
2) Physical Movement
3) Right-Brain Learning First
4) Listening Before Speaking
5) Stress-Free Environment
6) Role Play & Real-Life Contexts
7) Delayed Dialogues
8) Limited Vocabulary Per Session
9) Learner as Listener & Performer
10) Teacher Models & Plans Precisely

Kroskrity (2000) suggest language ideologies can be used as a concept ...four converging dimensions. write down 4th and last dimension?

anthropologist Kroskrity (2000) suggested that it is profitable to think of language ideologies as a cluster of concepts consisting of converging dimensions:

1) **First,** "language ideologies represent **the perception of language and discourse** that is constructed in the interests of a specific social or cultural group" (p. 8). That is, notions of language and discourse are grounded in social experience and often demonstrably tied to the promotion and protection of political-economic interests.

2) **Second,** "language ideologies are **profitably conceived as multiple** because of the multiplicity of meaningful social divisions (class, gender, clan, elites, generations, and so on) within sociocultural groups that have the potential to produce divergent perspectives expressed as indices of group membership" (p. 12). That is, language ideologies are grounded in social experiences that are never uniformly distributed across diverse communities.
3) **Third,** "members may **display varying degrees of awareness** of local language ideologies" (p. 18). That is, depending on the role they play, people develop different degrees of consciousness about ideologically grounded discourse.

4) **Finally,** "members' **language ideologies mediate between social structures** and forms of talk" (p. 21). That is, people's sociocultural experience and interactive patterns contribute to their construction and understanding of language ideologies.

These dimensions, according to Kroskrity, must be considered seriously if we are to understand the connection between language and ideology.

Teaching writing in Pakistan?

OR

Why writing skill of Pakistani students is poor? Reasons??

Writing as a language skill is a far developed skill that comes after listening, speaking and even after reading. Significance of writing cannot be denied; especially when it comes to writing in a second/foreign language, it is a complex and complicated task to learn. English has a unique significance around the globe due to its status as **a lingua franca**. Thus, writing in English is one of the major language skills that are required in the literate/educated world of today. As far as writing in English and the case of Pakistan is concerned, for all educated class, people serving in offices and in **elite class businesses**, it is considered to be an essential element. However, the teaching and learning of writing in English has multiple problems in our context. In this regard, we need to consider the following:

1) Situation in schools, colleges and universities
2) Teaching writing: Practices in Pakistan
3) Teacher training
4) Writing skill and Pakistani examination system

In Pakistani context name any 5 aspects which need to be considered while teaching reading in English?

We need to consider the following aspects in this regard:

1) Pakistani linguistic situation
2) Social context
3) Status of reading in English
4) School system in Pakistan
5) Use of Grammar Translation method
6) Reading lessons in our classrooms
7) Practices and problems
8) Lack of training of teachers
9) Reading comprehension
10) Intensive reading

Stages of Lazear syllabus design in MI?

there is no syllabus as such, either prescribed or recommended, in respect to MI based language teaching. However, there is a basic developmental sequence that has been proposed (**Lazear** 1991) as an alternative to what we have elsewhere considered as a type of "syllabus" design. The sequence consists of **four stages**:

1) **Stage 1: Awaken the Intelligence**. Through multisensory experiences like touching, smelling, tasting, seeing, and so on - learners can be sensitized to the many-faceted properties of objects and events in the world that surrounds them.

2) **Stage 2: Amplify the Intelligence**. Students strengthen and improve the intelligence by volunteering objects and events of their own choosing and defining with others the properties and contexts of experience of these objects and events.

3) **Stage 3: Teach with/for the Intelligence**. At this stage the intelligence is linked to the focus of the class, that is, to some aspect of language learning. This is done via worksheets and small-group projects and discussion.

4) **Stage 4: Transfer of the Intelligence**. Students reflect on the learning experiences of the previous three stages and relate these two issues and challenges in the out-of-class world. MI has been applied in many different types of classrooms. In some, there are eight self-access activity corners, each corner built around one of the eight intelligences. Students work alone or in pairs on intelligence foci of their own choosing.

Ivan Pavlov condition response?

One of the **most famous** of these scientists was Ivan Pavlov. His experiments showed that if he rang a bell before giving food to the dogs he was studying, they would **salivate**, when they heard the bell, even before the food was presented to them. This, he called, a conditioned response. Pavlov believed that this indicated how **animals learned**, even in the wild.

- **Conditioned Response** = A **learned reaction** to a previously neutral stimulus.

In Pavlov's case:

- **Bell (neutral stimulus)** → paired with **food (natural stimulus)**
- Over time, **bell alone** → caused **salivation** (conditioned response)

10 key aspects of direct method?

1) Classroom instruction is conducted in the target language
2) No translation is used; mother tongue is avoided
3) Grammar is taught inductively
4) Only everyday vocabulary is taught
5) Concrete vocabulary is taught through objects/pictures; abstract via ideas
6) Correct pronunciation and grammar are emphasized
7) Speech and listening comprehension are prioritized
8) Reading and writing follow listening and speaking

9) Language is introduced in dialogues, not isolation
10) Students are trained to ask and answer questions in the target language
11) Authentic materials are used
12) Cultural understanding is integrated into language learning

Cooperative Base Groups?

These are long term, lasting for at least a year and consist of heterogeneous learning groups with stable membership whose primary purpose is to allow members to give each other the support, help, encouragement, and assistance they need to succeed academically.

Olsen and Kagan (1992) propose the following key elements of successful group-based learning in CL:

- Positive interdependence
- Group formation
- Individual accountability
- Social skills
- Structuring and structures

Silent Way Method?

The Silent Way is the name of a method of language teaching devised by Caleb Gattegno. It is based on the premise that the teacher should be silent as much as possible in the classroom but the learner should be encouraged to produce as much language as possible. Elements of the Silent Way, particularly the use of color charts and the colored Cuisenaire rods, grew out of Gattegno's previous experience as an educational designer of reading and mathematics programs.

Very broadly put, the learning hypotheses underlying Gattegno's work are:

- Learning is facilitated if the learner discovers or creates rather than remembers and repeats what is to be learned.
- Learning is facilitated by **accompanying (mediating) physical objects**.
- Learning is facilitated by problem solving involving the material to be learned.

Describe acronym SPEAKING?

Hymes (1972) identified these factors, and has used an acronym SPEAKING to describe them:

- **S**etting refers to the place and time in which the communicative event takes place.
- **P**articipants refer to speakers and hearers and their role/relationships.
- **E**nds refer to the stated or unstated objectives the participants wish to accomplish.
- **A**ct sequence refers to the form, content, and sequence of utterances.
- **K**ey refers to the manner and tone (serious, sarcastic, etc.) of the utterances.

- **I**nstrumentalities refer to the channel (oral or written) and the code (formal or informal).
- **N**orms refers to conventions of interaction and interpretation based on shared knowledge.
- **G**enre refers to categories of communication such as lecture, report, essay, poem, and so forth.

Hymes notion of competencies-based language teaching?

For Chomsky, competence is a mental structure of tacit knowledge possessed by the idealized speaker–hearer, but for Hymes, it is that as well as the communicative ability to use a language in concrete situations.

Communicative competence consists of grammatical competence as well as sociolinguistic competence, that is, factors governing successful communication.

both Chomsky and Hymes accept and use the notion of competence, it is useful to compare it in its broadest terms. **Chomsky's notion** is limited to the **tacit knowledge** of formal linguistic properties possessed by the idealized speaker–hearer. **Hymes' notion** goes well beyond that to include **actual knowledge** and ability possessed by the language user. Furthermore, Chomsky's notion is **biologically based**, whereas Hymes' is more **socially based**. "The former is purely individual; the latter is mainly social. The former concerns form; the latter concerns function. The former characterizes a state; the latter involves processes" (Taylor, 1988, p. 156). It is rather apparent then that Hymes brings a much **wider perspective** to the notion of competence, one that has more relevance for treating and understanding language as a **vehicle** for communication.

Status of English in Pakistani Schools?

1) Symbol of Prestige and Power
2) Official and Elite Language
3) Ineffective Teaching Practices
4) Ineffective Teaching Practices
5) Skill Gaps in Government Schools
6) Public vs Private Sector Divide
7) Poor Speaking and Writing Skills
8) Exam-Oriented, Not Communicative

the learning hypotheses underlying Gattegno's work??

- Learning is facilitated if the **learner discovers** or creates rather than remembers and repeats what is to be learned.
- Learning is facilitated by **accompanying (mediating) physical** objects.
- Learning is facilitated by **problem solving involving** the material to be learned.

Challenges in Grammar Translation Method (GTM)?

- Overemphasis on translation and grammar rules.
- Lack of focus on speaking and listening skills.
- Mechanical and uninspiring teaching methods.
- Exam-oriented approach that limits communication
- Little to no attention to pronunciation
- Language not used for real communication

Three Constraints of ELT in Pakistan?

- Inadequate resources and overcrowded classes.
- Unenthusiastic teachers and lack of professional development
- Influence of social, cultural, and political factors on language policy

Three components of Austin's speech act theory?

1) In performing a **locutionary act**, one often performs such an act as —asking or answering a question, giving some information or an assurance or a warning, announcing a verdict or an intention, pronouncing sentence, making an appointment or an appeal or a criticism, making identification or giving a description, and the numerous like.

2) The **perlocutionary act** is the effect or the consequence of an utterance in a given situation

3) For it to have what Austin calls **illocutionary force**, a speech act has to meet certain socially agreed upon demands or conventions. For instance, a statement like I now pronounce you man and wife has its intended illocutionary force only if it is uttered in a proper context (e.g., a church) and by a proper person (e.g., a priest). The same statement uttered by a clerk in a department store will not render two customers a married couple!

Note on Suggestopedia?

Suggestopedia, also known as **Desuggestopedia**, is a method developed by the **Bulgarian psychiatrist-educator Georgi Lozanov.** Suggestopedia is a specific set of learning recommendations **derived from Suggestology**, which Lozanov describes as a "science concerned with the systematic study of the non-rational and/or non-conscious influences" that human beings are constantly responding to.

characteristics of Suggestopedia:

- Decoration
- furniture,
- arrangement of the classroom

- the use of music
- the authoritative behavior of the teacher

eight native intelligences??

Gardner claims that his view of intelligence(s) is culture-free and avoids **the conceptual narrowness** usually associated with traditional models of intelligence (e.g., the Intelligent Quotient [IQ] testing model). Gardner posits eight native intelligences," which are described as follows:

1) **Linguistic:** the ability to use language in special and creative ways, which is something lawyers, writers, editors, and interpreters are strong in.
2) **Logical/mathematical:** the ability to think rationally, often found with doctors, engineers, programmers, and scientists.
3) **Spatial:** the ability to form mental models of the world, something architects, decorators, sculptors, and painters are good at.
4) **Musical:** a good ear for music, as is strong in singers and composers.
5) **Bodily/kinesthetic**: having a well-coordinated body, something found
6) **Interpersonal:** the ability to be able to work well with people, which is strong in salespeople, politicians, and teachers.
7) **Intrapersonal:** the ability to understand oneself and apply one's talent successfully, which leads to happy and well-adjusted people in all areas of life.
8) **Naturalist:** the ability to understand and organize the patterns of nature.

other types of lexical units?

1) Binomials: clean and tidy, back to front
2) Trinomials: cool, calm, and collected
3) Idioms: dead drunk, to run up a bill
4) Similes: as old as the hills
5) Connectives: finally, to conclude Conversational
6) gambits: Guess what!

Three important UK-based corpora?

1) the COBUILD Bank of English Corpus
2) the Cambridge International Corpus
3) British National Corpus

assumptions about learning theory in the lexical approach?

1) **Encountering new learning** items on several occasions is necessary, but requires sufficient conditions for learning to occur.

2) **Noticing lexical chunks** or collocations is necessary but does not have sufficient condition for "input" to become "intake."
3) **Noticing similarities, differences**, restrictions, and examples contributes to turning input into intake, although formal description of rules probably ssssssdoes not help.

Approach and Theory of Language and Learning of Competency-Based Language Teaching?

CBLT is based on a **functional and interactional perspective** on the nature of language. It seeks to teach language in relation to the social contexts in which it is used. Language always occurs as a medium of interaction and communication between people for the achievement of specific goals and purposes. CBLT has for this reason most often been used as a framework for language teaching in situations where learners have **specific needs** and are in particular roles and where the language skills they need can be fairly accurately predicted or determined. CBLT thus takes a "**mosaic" approach** to language learning in that the **"whole"** (communicative competence) is constructed from smaller components correctly assembled. CBLT is also built around the notion of communicative competence and seeks to develop functional communication skills in learners. These skills are generally described in only the most general terms, rather than being linked to the performance of **specific real-world tasks**. CBLT thus shares some features with Communicative Language Teaching.
