

ENG505 Mids Solved

Q. Describe language universe (Topic 06)

The theory advocates that children are born with Language Acquisition Device (Hadley, 2001, p. 58) and are innately programmed to learn language. The presence of language universals is seen to be the key characteristic which contains parameters setting. UG emphasizes that biological mechanism determines the language learning process supported by the representation of ‘core grammar.’

Q. Briefly discuss the theory of universal grammar (Topic 06)

UG refers to the mentalist approach that supports nativism and cognitivism. The theory advocates that children are born with Language Acquisition Device (Hadley, 2001, p. 58) and are innately programmed to learn language. The presence of language universals is seen to be the key characteristic which contains parameters setting. UG emphasizes that biological mechanism determines the language learning process supported by the representation of ‘core grammar.’

Q. Difference b/t monitor over user and under user Krashen 5 marks (Topic 06)

Stephen Krashen’s ‘Monitor Model’ distinguishes acquisition (subconscious learning) and learning (conscious learning) as responsible factors for developing competence in the second language acquisition. The monitor hypothesis claims that the acquisition process is responsible for all second language utterances and fluency. On the contrary, learning is the ‘editor’ and ‘monitor’ for the output (Hadley, 2001). The input hypothesis states that speaking fluency emerges over time and that acquisition process is subject to our exposure to the language, which is beyond our current level of comprehension.

Q. Schumann Acculturation theory: (Topic 07)

The basis of Schumann's 'Acculturation Theory' is a 'social theory' which considers social forces as the deriving factors that affect language learning and acquisition processes. It emphasizes that instead of internal mental activities, the external factors facilitate learning by providing the target language culture for specific language functions. Language being social phenomena does consider attitudes and stereotypes towards the target language as affective learning factors. Errors can be corrected.

Q. Edward Anthony Model (Topic 08)

Edward Anthony proposed a 'three-level framework' (1965) based on 'Approach, Methods, and Techniques.' 'Approach' is a set of principles or ideas about the nature of language learning; 'Method' is an overall mechanism; 'Technique' is a specific strategy/way. Researchers vary in terms of design, procedure and approach; Anthony's framework emphasized 'Approach,' whereas Richards and Rogers considered 'Method' as a broader term in comparison to approach. Repka and Stern claim that 'method or methodology' is a broader term that covers the rest. Goal orientation, organization, progressiveness, and linking of age to content and successiveness are the general characteristics of methods. However, methods and methodology are related to planning of a specific task, content, procedure, and assessment.

Q. Differentiate between the Characteristics of controlled and free techniques? (Topic 11)

Controlled Techniques	Free Techniques
 Teacher Centered  Manipulative Structure  Predicted Response  Pre-planned Objectives	 Student Centered  Communicated Open Ended  Unpredicted Response  Negotiated Objectives

Q. Brown taxonomy (Topic 11)

Analysis of 'Language Learning Theories' requires understanding of the terms 'Technique, Activity and Procedure.' 'Technique' is a broader term for specific tasks and refers to Brown's taxonomy of techniques: controlled, semicontrolled and free techniques. However, 'Activity' and 'Procedure' deal with learner's performance and practices/behaviors in teaching respectively.

Q. Define language learning (Topic 12)

Learning belongs to behaviorist approach and deals with a mechanical process of habit formation. As opposed to acquisition which is a subconscious process, learning involves both explicit (learner's is aware of modification of his/her knowledge base) as well as implicit (change in the learner's knowledge base but outside his/her conscious introspection) learning processes. Drill, imitation, and repetition are the basic elements of learning.

Q. Key Features of Performance (Topic 13)

- 📖 Parole (Saussure) describes the physical manifestation of langue (competence).
- 📖 Performance can be full of errors.
- 📖 Performance and its products are complex phenomena due to speaker-hearer's linguistic competence, speech production, memory, dialectical environment, idiolect and individual style, factual knowledge, health and emotional state, and other related factors.

Q. Differentiate b/w deductive and inductive learning? (Topic 14)

deductive	inductive
Deductive Learning, being teacher centered approach, refers to providing learners with an understanding of the rules followed by examples and practice. The rules are of primary focus and the practice is encouraged through examples that inculcate rules.	Inductive Learning, being learner-centered, begins with examples first and requires learner to determine rules relevant to the examples. Determining the relevancy of rules appropriate to examples is a challenging task for the learner. It equips learners with the knowledge of the concepts.

Q. Describe Behaviorism (Topic 15)

The behaviorist movement began with John Watson in 1913. It is also known as a psychological approach which emphasizes scientific and objective methods of investigation. The behaviorists claim that knowledge is external, and humans are born with blank slate. Learning takes place through association between stimuli-response processes resulting into specific habit formation.

Q. Pavlovian conditioning key features. 5 marks (Topic 16)

-  Stimulus
-  Response
-  Unconditioned Stimulus
-  Conditioned Stimulus
-  Conditioned Response
-  Extinction
-  Spontaneous Recovery
-  Generalization
-  Discrimination

Q. Classical Conditioning (Topic 17)

John Watson (1913) took the lead from Pavlov's idea of conditioning that a neutral stimuli becomes conditioned due to specific response and proposed that process of learning may also be referred to as the process of classical conditioning (based on Pavlov's observations). Similar to the Pavlovian Conditioning, the Classical Conditioning supports the habit formation and opposes the idea of consciousness as responsible factors for learning. The theory of Classical Conditioning is a scientific theory that follows three stages: Before, During, and After Conditioning as the concrete processes of learning.

Q. Bandore mediating Process. (Topic 18)

The concept of Reciprocal Determinism was proposed by Albert Bandura in 1977. He introduced Social Learning Theory which advocated that behavior is not a single phenomenon, rather a result of the interaction between cognitive, behavioral, and environmental determinants. Since external and internal both factors were considered vital for developing a particular behavior; therefore, Meditating and Observational learning were emphasized by Bandura. Mediating processes occur between stimuli and responses

Q. What Skinner says about verbal Behaviour? (Topic 19)

B.F Skinner proposed the concept of 'Operant Conditioning.' He introduced the theory of Verbal Behavior in 1957. According to this theory, a person's behavior gets reinforced through the mediation of other persons. Any change that occurs in

one's behavior is a result of others' reinforcement. Skinner identified following three types of responses that can follow behavior:

1. Neutral Operant
2. Reinforcer
3. Punisher

Q. Mediation theory (3 marks): (Topic 20)

The 'Mediation Theory' was introduced by Charles Osgood (1953, 1957). It claims that the linguistic stimulus (a word or sentence) elicits a 'mediating' response that is self-stimulating. Mediation process is viewed as covert and invisible, acting within the learner. This makes it a cognitive theory which rationalizes internal and external processes for developing behavioral association.

Q. Give the levels where the theory functions. (Topic 20)

-  **Sensational Level:** basic stimulus response reaction occurs
-  **Perception Level:** input occurs relating it to the past experiences
-  **Representational Level:** outward reaction, overt behavioral response to the word

Q. Features of Mediation Theory (Topic 20)

1. **Physical stimulus:** reaction of a body (hear, see, touch or smell causes us to feel something)
2. **Internal response:** internalization
3. **Internal stimulus:** leads to internal stimulus – which is the thought in which you relate the stimulus to outward response
4. **Outward response:** visible or physical response that takes place due to the first response

Q. Law of effect: (Topic 21)

'Law of Effect' was introduced by Edward Thorndike (1898). It proposed that pleasant feedback leads to the repetition of a particular behavior and unpleasant feedback ceases it. The theory views learning as a process of developing association between a certain situation and its resultant pleasant.

Q. Five assumptions of behaviorism. (5) (Not sure about the answer) (Topic 21)

1. Multiple or varied response
2. Set of behaviors or attitude
3. Partial activity or prepotency of elements
4. Assimilation
5. Associative shifting

Q. Define nativism. (3) (Topic 22)

Chomsky's (1965) idea of innateness has been a hallmark of language learning mechanism. It attempts to explain the child's mastery of a native language in such a short time despite the highly abstract nature of the rules of language.

Q. Mac Neill four rules for Lad (5 marks) (Topic 22)

- 📖 MacNeill (1966) supported appropriateness of LAD and justified its existence based on the following: The ability to distinguish speech sounds from other sounds in the environment
- 📖 The ability to organize linguistic data into various classes that can later be refined • Knowledge that only a certain kind of linguistic system is possible
- 📖 The ability to engage in constant evaluation of the developing linguistic system to construct the simplest possible system out of the available linguistic input

Q. Criticism on Behaviorism: (Topic 23)

Chomsky, in A Review of B F Skinner's Verbal Behavior (1959), used language as a tool for critique of Skinner's behaviorism. According to Chomsky, learning is not possible only through repetition and reinforcement as advocated by Skinner. Chomsky believes that a child has the ability to use finite set of rules to construct infinite sentences, and s/he can create phrases which they have never heard before.

Q. Rene Descartes's demon argument. (Topic 24)

He introduced three types of ideas, namely: innate ideas, adventitious ideas, and factitious ideas. His concept of idea asserts that the knowledge or belief in God

determines the truth and reality. His famous 'demon argument' strengthens his idea: Question: What then is real? Answer: Doubt proves that I am real.

Q. Transcendental theory or Idealism Key features of transcendental idealism include: (Topic 25)

- 📖 Concepts without perceptions are empty
- 📖 Perceptions without concepts are blind
- 📖 It is true that all knowledge begins with experience
- 📖 It is not true that all knowledge arises from experience
- 📖 Phenomenal realm and Noumenal realm

Q. Write any five points of H.H. Stern's language teaching method in the context of SLA. (Topic 27)

1. Practice, repeat, and practice in childhood as well as learning a foreign language (L1 and SLA)
2. Language learning is mainly a matter of imitation (L1 and SLA)
3. Practice the separate sounds, then words, then sentences (L1 and SLA)
4. Understanding always precedes speaking (L1 and SLA)
5. Natural learning order of four skills (L1 and SLA)

Q. Write Arguments in support of Universal Grammar. (3 marks) (Topic 28)

The arguments in support of UG are primarily concerned with its universality, convergence, poverty of the stimulus, no negative evidence, child's easy acquisition, uniformity, maturational effects, dissociation between language and cognition, and neurological separation. Chomsky's UG attempts to explain what constitutes knowledge of language, how it is acquired, and put to use.

Q. Define Cognitivism (Topic 31)

Cognitivism replaced behaviorism in 1960s as the dominant paradigm. It is the study in psychology that focuses on mental processes including how people perceive, think, remember, learn, solve problems, and direct their attention to one stimulus rather than another. It enables psychologists to understand cognition based on cognitivist perspective. The theory refers to mental processes and also the involvement of sensation, perception, attention and encoding as important factors

in cognitive processes. Mergel (1998) views cognitivism as the thought process behind the behavior.

Q. Define social cultural theory (Topic 31)

It is based on the developmental analysis, the role of language, and the social relation. Vygotsky believed that learning takes place at two levels:

- 📖 through interaction with others
- 📖 integrated into the individual's mental structure

Q. Vygotsky view of language (Topic 32)

Vygotsky believed that language is one of the most important psychological tools that effects children's cognitive development. Firstly, language is an essential factor for communication (social speech). Next, children begin to use egocentric or private speech to control their own thinking. Furthermore, understanding of cognitive perceptual processes enables the learners to analyze the mental processes involved in learning process.

Q. Mention any five levels of learning by Robert Gagne: (imp) (Topic 33)

1. Gain attention
2. Inform of objectives
3. Stimulate prior knowledge recall
4. Present stimulus
5. Provide learning guideline

Q. Write down 3 basic components of Piaget's cognitive Theory. (Topic 34)

1. Schema: the basic building block of intelligent behavior – a way of organizing knowledge.
2. Adaptation processes
 - 📖 **Assimilation:** using an existing schema to deal with a new object or situation.
 - 📖 **Accommodation:** existing schema needs to be changed to deal with a new object or situation.
 - 📖 **Equilibrium:** Equilibrium occurs when a child's schemas deals with new information in Schema.

3. Stages of cognitive development

Q. STAGES OF cognitive development (Topic 34)

- 📖 Sensorimotor (birth to age 2), object permanence
- 📖 Preoperational (from age 2 to age 7), thinking symbolically
- 📖 Concrete operational (from age 7 to age 11), operational thoughts
- 📖 Formal operational (age 11+ -adolescence and adulthood), ability to think about abstract concepts

Q. Explain multi store model. OR Long Term Memories and Short Term Memories: (imp) (Topic 35)

The Atkinson-Schiffrin model is a theory of human memory that was proposed by Richard Atkinson and Richard Schiffrin (1968) and explains how our senses experience different things in terms of sight, hearing, touch, feeling, and taste, but only a fraction of this is remembered. The model of AtkinsonShiffrin proposed that the human memory could be broken down into three different memory stores:

Sensory Memory	Short Term Memory	Long Term Memory
📖 Duration: $\frac{1}{4}$ to $\frac{1}{2}$ second 📖 Capacity: all sensory experience 📖 Encoding: sense specific (e.g. different stores for each sense)	📖 Duration: 0-18 seconds 📖 Capacity: 7 +/-2 items 📖 Encoding: mainly auditory	📖 Duration: unlimited 📖 Capacity: unlimited 📖 Encoding: mainly semantic (but can be visual and auditory)

Q. Criticism Faced by Multi-Store Model (Topic 35)

- 📖 The sensory stores are sensory systems, not memory systems as most people think of the term 'memory'.
- 📖 The model's claim, that there is nothing in between short-term and long-term memory is refuted by the evidence that information can reside somewhere between the extremes of active attention and long-term storage.
- 📖 As opposed to the claim that there is just one short-term system and just one long-term system, the critics believe that in reality, there are many memory

systems operating in parallel (for example, different systems for vision, language, and odor memory). Each has short-term and long-term operations.

📖 The Atkinson-Shiffrin model does not give enough emphasis to unconscious processes.

Q. Key principles of cognitivism. 5 marks (Topic 36)

- 📖 Construction Grammar
- 📖 Rational Language Processing
- 📖 Exemplar-Based Abstraction and Attraction
- 📖 Emergent Relations and Patterns
- 📖 Dialectic

Q. The Competition Model and the Associative-Cognitive CREED Theory (Nick Ellis): (Topic 36)

The Competition Model is a psycholinguistic theory of language acquisition and sentence processing developed by Elizabeth Bates and Brian MacWhinney which describes language development in formal and informal settings. It also looks into the role of cognitive mechanisms that occur in the learner's brain while processing language. MacWhinney (2002) considers the input, the learner, and the context as the three main components in the language learning process. Lexical Functionalism, Connectionism, Input-Driven Learning, and Capacity are the dominant features of the model. The Associative-Cognitive CREED Theory in SLA was introduced by Nick Ellis which claims that language is learned in the same way as any other human skill. This theory is based on both the behavioral (associations) and cognitivist (cognitive) traditions.

Q. McClelland on Connectionism (1986) (5) (Topic 37)

McClelland (1986) state that there are 8 major components of the PDP model framework:

- 1) a set of processing units,
- 2) a state of activation,
- 3) an output function for each unit,
- 4) a pattern of connectivity among units,

- 5) a propagation rule for propagating patterns of activities through the network of connectivities,
- 6) an activation rule for combining the inputs impinging on a unit with the current state of that unit to produce a new level of activation for the unit,
- 7) a learning rule whereby patterns of connectivity are modified by experience, and
- 8) An environment within which the system must operate.

Q. Key features of constructivism. (Topic 39)

-  Learner-centeredness
-  Environment awareness

According to Jonassen and Land (2002), context, construction and collaboration are the basis of the constructivist learning

Q. Define constructivism. (3) (Topic 39)

Constructivism Theory is based on observation (learning philosophy) and scientific study about how people learn (teaching philosophy). The assertion is that the experiences enable people to construct the knowledge of the world around them. Constructivism has two branches, Cognitive Constructivism and Social Constructivism, and emphasizes learner differences, integration of linguistic, psychological, and sociological paradigms.

Q. writes any three points of constructivism? (Topic 40)

-  Learning must be started with the issues around which learners are actively trying to construct meaning.
-  The learning process focuses on primary concepts, not isolated facts.
-  Construction of the knowledge, and not the memorization, is encouraged.

Q. Bruner's Idea of Scaffolding and Discovery Learning (5) (Topic 45)

Influenced by Vygotsky's theory of social constructivism, Jerome S. Bruner, psychologist of the twentieth century, proposed Theory of Scaffolding in 1976. The theory is considered to be an influential contribution in the field of education because it proposed scaffolding as vital for all types of learning. It enables a learner to overcome fears and focus on acquiring knowledge. According to Bruner,

the goal of education should be directed to learning to learn; therefore, teachers should design curriculum which facilitate rote learning, problem-solving, and learning through discovery. He introduced Discovery Learning Theory (1961) with the following three stages known as stages of 'Representation':

📖 **Enactive:** representation of knowledge through actions

📖 **Iconic:** the visual summarization of images

📖 **Symbolic representation:** the use of words and other symbols to describe experiences

Q. Jerome Bruner contribution in education. 3 marks (Topic 46)

1. The modes of representation
2. The importance of teaching and learning 'optimal structure,'
3. The spiral curriculum,
4. Learning through the acts of discovery

Q. Three scale of Self-efficacy or Bandura's Socio-Cognitive Model of Human Behavior (Topic 47)

Albert Bandura suggested three scales to measure self-efficacy:

1. Self-efficacy magnitude (Level of difficulty)
2. Self-efficacy strength (One's determination or surety about oneself)
3. Generality of self-efficacy (One's surety about the application of same thing to new)

Q. Discuss any five important features of Krashen's input hypothesis (Topic 51)

Stephen Krashen, is known for his theories of language acquisition and development. Krashen's theory of language input hypothesis advocates that the acquisition of second language is highly dependent on the learner's comprehension of the input. The focus of the hypothesis is on the acquisition and not the learning. Krashen explained his hypothesis as:

📖 Acquisition requires meaningful interaction in the target language, natural communication, in which speakers are not concerned with the form of their utterances but with the messages, they are conveying and understanding.

- 📖 Language acquisition does not require extensive use of conscious grammatical rules, and does not require tedious drill.
- 📖 Comprehensible input is the crucial and necessary ingredient for the acquisition of language.

Q. What is meant by input hypothesis? (Topic 54)

Krashen's theory of Input Hypothesis advocates that the acquisition of second language is highly dependent on the learner's comprehension of the input. He suggested the following techniques for comprehensible input:

- 📖 Use expression and body language
- 📖 Provide thinking time
- 📖 Pauses between phrases
- 📖 Shorter sentences
- 📖 Stress high frequency words

Q. Discuss criticism on communicative language teaching approach (imp) (Topic 56)

According to Stern (1992), CLT has become more successful in ESL (English as a second language) settings, but failed to show successful results in EFL (English as a foreign language) contexts. Some CLT proponents, e.g. Littlewoods even proposed to treat it as an umbrella term which the opponents of CLT considered the renaming of the existing old approaches and nothing new or revolutionary. CLT focuses more on developing fluency while accuracy is neglected. It does overburden teachers as it demands developing of functional syllabus for effective classroom activities.

Q. Language Meta function by M.A.K Holiday (Topic 57)

M.A.K. Halliday, a British linguist, developed the concept of Systemic Functional linguistics in 1960. It claims that language is a resource for making meaning. The systemic functional linguistics is based on three levels; namely, meaning (semantics), sound (phonology), and wording or lexico-grammar (syntax, morphology, and lexis).

Q. Steps in Acculturation Model: (imp) (Topic 58)

Acculturation Model was introduced by John Schumann, an American linguist (1986), who claimed that the extent of contact between L2 and L2 speaker affects the success of SLA. Social and psychological factors are key components of acculturation process. According to Brown (1980), the stages of acculturation in the target language are Euphoria, Culture-shock, Cultural stress, Gradual recovery, and Full-recovery. Language shock, culture shock, culture stress, motivation, and ego permeability are the factors that are responsible for creating psychological distance as claimed by Ushioda (1993). Domination of high culture causing low self-esteem among L2 learners and lack of explanation about the internal processes of SLA are the major points of the criticism of Acculturation Model.

Q. Describe the term legitimate peripheral participation. (Topic 59)

Inspired by the works of Vygotsky and Dewey, Jean Lave and Etienne Wenger introduced the theory of Situated Learning as an instructional approach in the early 1990s. The theory laid down great emphasis on the learning as a social process and encouraged to maximize social interaction for the purpose of meaningful learning. They proposed Legitimate Peripheral Participation, Peripherality, Full Participation, and Community of Practice as key factors of Situated Learning theory.

Q. What is the basic of BLC theory? (Topic 60)

BLC Theory was proposed by Hulstijn in 2015. The bases of the theory are the understanding of individual differences in monolingual and bilingual people and the matters of L2 proficiency assessment. Hulstijn believes that cognition is a term that refers to neural network which consists of the representation and use of information for both knowledge and skills; whereas, 'Basic' is concerned with what native speakers have common related to language cognition. The term 'Higher' is used here as an extended language cognition. The core linguistic cognition includes: phonetic-phonological, morphonological, morpho-syntactic, and lexical domains of linguistic knowledge. It also looks into how to use language forms as appropriate to the communicative situation. BLC focuses more on reading and writing rather speech reception and speech production. In the words of Hulstijn (2015): 'BLC pertains to:

- 1) the largely implicit, unconscious knowledge in the domains of phonetics, prosody, phonology, morphology, and syntax,
- 2) the largely explicit, conscious knowledge in the lexical domain (form-meaning mappings), in combination with,
- 3) the automaticity with which these types of knowledges can be processed.

Q. Generative grammar (5 marks) (Topic 63)

The Generative School of thought derived its concepts from the Generative Grammar theory of Chomsky. It focuses on the study of syntax, but does include semantics, phonology, and morphology. Generative Grammar theory provides the set of rules that can accurately predict which combinations of words make grammatically correct sentences. Transformational Generative Grammar was driven from Generative Grammar as a process of language creativity, whereby, a learner can transform rules from one structure. In TG theory, phrase structure rules explain, mathematically, our knowledge to assemble the basic units of a sentence.

$$S \rightarrow NP + VP$$

In the above formula, 'a sentence consists of a noun phrase followed by a verb phrase'. TG has set forth, two levels of syntactic structure: deep structure (an abstract underlying structure of a sentence) and surface structure (outward form of a sentence)

Q. Two sets of cognitive skills Intention-reading and pattern-finding are two sets of cognitive skills proposed by Tomasello that reinforce usage-based theory. (Topic 64)

 **'Intention-reading'** is what children must do to determine the goals or intentions of mature speakers when they use linguistic conventions to achieve social ends, and thereby to learn these conventions from them culturally in accordance with the functional approach mentioned above.

 **'Pattern-finding'** is what children must do in order to extract abstract linguistic schemas or constructions from the individual utterances in accordance with the grammatical approach mentioned above. Therefore, this theory has two main dimensions: functional and grammatical.

Q. Usage base theory verses UG. (5 marks) (Topic 65)

The differences between innate UG and usage-based accounts of L1 and L2 acquisition can be summarized as follows (James H-Y. Tai, 2014):

- 📖 At the level of brain, UG approach assumes that linguistic representation is localized in a language-specific module with its own rules of processing. In contrast, usage-based approach assumes 'plasticity' to a great extent. Linguistic representation in brain can change in the course of L1 as well as L2 acquisition and development.
- 📖 Children are creative and productive to start with innate UG. However, in usage-based approach, children are conservative and unproductive to start with and only gradually become productive by induction through experience.
- 📖 In UG approach, the role of input is underdetermined because of 'poverty of the stimulus' with lack of negative evidence (ungrammatical sentences). In usage-based approach, all linguistic structures emerge from generalization of the input through induction.
- 📖 In UG approach, innate core grammar needs mechanism such as maturation, triggering, and linking rules to activate it. In contrast, the usage-based approach requires children to figure out linguistic system by adaptive social-communicative behaviors.

Q. Names the types of Proficiency Assessments. (Topic 66)

- 📖 Discrete-point versus integrative assessment
- 📖 Direct versus indirect assessment
- 📖 Objective versus subjective assessment
- 📖 Group testing versus individual assessment

Q. what are the three aspects of linguistic competence? (Topic 68)

- 📖 Assessment component
- 📖 Planning component
- 📖 Execution component (Bachman, 1990, pp. 84-108)

Q. Lyle Bachman provide classification of language or What type of Communicative Language Ability (CLA) (Topic 68)

Lyle Bachman, one of the leading theorists in the field of language testing, proposed Communicative Language Ability (1990) which attempted to distinguish between 'Knowledge' and 'Skills'. CLA is concerned with the knowledge and capacity to use it appropriately in a given context. Bachman classifies the component called 'Language Competence' in two divisions:

1. Organizational Competence

📖 Grammatical Competence

📖 Textual Competence

2. Pragmatic Competence

📖 Illocutionary Competence

📖 Sociolinguistics Competence

📖 Communicative Competence

3. Strategic Competence is another aspect of Language Competence proposed by Bachman with the following three components:

📖 Assessment component

📖 Planning component

📖 Execution component (Bachman, 1990, pp. 84-108)

Q. Types of Competencies (Topic 69)

📖 Linguistic Competence

📖 Strategic Competence

📖 Sociolinguistic Competence

📖 Discourse Competence

Q. Five characters of communicative competence. (5) (Topic 69)

📖 Dynamic nature of communicative competence.

📖 Communicative competence applies to both written and spoken language, as well as too many other symbolic systems.

📖 Communicative competence is context specific.

📖 Competence is what one knows. Performance is what one does.

📖 Communicative competence is relative, not absolute

Q. Write the core components of sociolinguistic knowledge according to Bachman and Palmer's revised model (1995, 2010) of CLA? (Topic 71)

In the revised model of Bachman and Palmer, nomenclature was changed from the term competence to knowledge and strategic competence being proposed as a set of met cognitive strategies.

Q. Formulaic competence (Topic 72)

Formulaic competence refers to formulaic expressions. They are fixed or prefabricated chunks which commonly used by native speakers in everyday life. Native speakers tend to use particular formulaic expressions frequently therefore to sound like native, nonnative speakers have to use those formulaic expressions.

Q. Symbolic competence: (Topic 73)

Kramsch and Whiteside (2008) defined Symbolic Competence as the ability to position oneself as a multilingual subject, to understand the cultural memories evoked by symbolic systems, to perform and create alternative realities, and to reframe and shape the multilingual game in which one invests. Kramsch believes that there are three dimensions of language as symbolic system, namely, symbolic representation, symbolic action, and symbolic power. Discourse plays important role in the interpretation of symbolic competence as it refers to language use beyond the sentence level. Relationship between language and contexts contribute in the understanding of symbolic competence. It is believed that ‘Symbolic Competence is also engaged in the symbolic power game of challenging established meanings and redefining the real.’

Q. Five factors of psychology distances (Topic 93)

1. Methods based on the behaviorist theory of language learning lay emphasis on accuracy and form and do not allow errors.
2. Methods based on the interactionist theory give learners the opportunity for conversation where they receive meaningful input from teachers and students.
3. Methods based on the ‘comprehensible input’ theory, most closely associated with Stephen Krashen, do not put emphasis on interaction, but on providing input through listening and/or reading.
4. Methods based on teaching what the learner is ready to learn.

5. Methods that not only ‘recognize the role for instruction, but also assume that not everything has to be taught’ (Lightbown & Spada, 1993, p. 97).

Q. Positive reinforcement and negative reinforcement (Topic 96)

 **Positive reinforcement** adding something to enforce the result (you do this, you get this). Usually praise and rewards.

 **Negative reinforcement:** taking something negative away in order to increase a response.

Q. types of Acculturation (Topic 109)

According to Brown (1980), the stages of acculturation in the target language are:

1. Euphoria – A stage where learner get excited in learning new culture
2. Culture-shock – where learner is exposed to new values and belief
3. Cultural stress – where learner is partially adjusted in the environment
4. Gradual recovery – with time being learner get recover in performance
5. Full-recovery – it is learner’s adaptation of new culture

Q. the child series activities etc {don’t know exactly it might be receptive and productive activities.}(5 marks) (Topic 125)

Receptive Activities: Receptive Activities are designed to develop the receptive skills. Listening and Reading are called receptive skills as the learner receives the input and does not produce the language. They are sometime referred to as passive skills, but the learner is still required to participate in the process by comprehending the input to create meaningful learning. Reading, as a receptive skill provides the learner with knowledge of technological developments, world news, and scientific discoveries etc.

Productive Activities: Productive Activities are designed for the development of the productive skills. Speaking and writing are known as productive skills as they produce language. Writing is the most important productive activity for L2 learners to express themselves for developing relevant texts according to the target situation requirements.

Q. Six stages of Second language acquisition.

📖 Pre- production. This is also called "the silent period," when the student takes in the new language but does not speak it.

📖 Early. Production.

📖 Speech. Emergent.

📖 Beginning. Fluency.

📖 Intermediate. Fluency.

📖 Advanced. Fluency.
