MGTE630

LECTURE 23-45

TOPIC 90-194

LECTURE 23

Topic 90: Impact of a Merger on Culture

- A merger creates a new organization with a new culture.
- The challenge is to combine the best aspects of the two original cultures.
- Questions to consider:
  - What cultural elements are most compatible?
  - What elements may cause conflict?
  - What do we want the new culture to look like?
  - What do we want to keep from the old cultures?
  - How will we know if cultural integration is successful?

Topic 91: Impact of Virtual Work on Culture

- Challenges in virtual organizations:
  - No shared values or norms
  - No frameworks or policies
  - Differences in communication styles
  - Lack of structure and trust
- Solutions:
  - Set communication norms
  - Build trust
  - Make virtual employees feel part of the team

- Embrace diversity
- Celebrate accomplishments

Topic 92: Cultural Change Needed for KM

- Culture is stable, but change is needed for knowledge management.
- Leadership plays a key role.
- Recommendations:
  - Define desired cultural outcomes
  - Assess current culture
  - Identify enablers and barriers
  - Conduct a gap analysis

Topic 93: Barriers to Cultural Change

- Barriers:
  - Lack of time and meeting places
  - Resistance to change
  - Lack of absorptive capacity
  - Not-invented-here syndrome
  - Intolerance of mistakes
  - Lack of common language
- Solutions:
  - Provide incentives and education
  - Encourage collaboration and creativity
  - Establish a knowledge taxonomy and dictionary

LECTURE 24

Topic 94: Knowledge Management Tools

- KM technologies support different phases of the KM cycle.
- Classification of KM Technologies:
  - Generate knowledge (e.g., data mining)
  - Code knowledge (e.g., content management)
  - Transfer knowledge (e.g., communication tools)
- Examples of KM technologies:
  - Content creation (authoring tools, data mining)
  - Content management (taxonomies, metadata)
  - Communication and collaboration (email, videoconferencing)
  - Networking (intranets, extranets)

Topic 95: Content Creation Tools

- Authoring tools: software for creating digital content (e.g., word processing, web design)
- Annotation technologies: adding comments to text documents (e.g., track changes in Word)

Topic 96: Data Mining and Analytics

- Data mining: extracting predictive information from large databases using statistical analysis
- Analytics: studying past data to research trends and improve business decisions
- Applications: market segmentation, fraud detection, credit risk analysis

- Software: statistical analysis tools (SAS, SPSS), data mining software (SAS EnterpriseMiner)

Topic 97: Blogs

- A blog is a frequently updated, publicly accessible journal
- Uses: exchanging ideas, building knowledge networks, personal and corporate use
- Types: personal, collaborative, microblogging, corporate, aggregated
- Forms: text, multimedia (e.g., video clips on YouTube)

LECTURE 25

Topic 98: Mashups

- A mashup combines content from different sources into one application, like combining a map with real estate listings.
- Examples:
  - Aggregating news feeds from different sources
  - Combining a calendar with a to-do list
  - Integrating a chatbot with a website
- Mashups make it easy to combine different media types, like text, images, videos, and maps, to create a new application.

Topic 99: Crowdsourcing

- Crowdsourcing is obtaining services, ideas, or content from a large group of people, often online.
- Examples:

- Brainstorming ideas for a new product
- Solving a complex problem with input from many people
- Designing a new product or logo

- Combining crowd-sourced content with expert opinion can validate results and ensure quality.

Topic 100: Visualization Tools and Knowledge Maps

- Knowledge maps visualize complex knowledge to aid capture and codification, like a mind map or concept map.

- Data visualization software helps detect patterns and trends in data, making it easier to understand.

- Examples:
  - Using pie charts to show sales data
  - Creating interactive 3D environments to visualize complex systems
  - Using videos to record interviews or explain complex concepts

- Mobile tools like smartphones and tablets can aid knowledge capture and codification, especially in the field.

Topic 101: Content Management Tools

- Content management tools help manage valuable content throughout its lifespan, from creation to archiving.

- Metadata (information about content) is used to manage content, like tags and keywords.

- XML provides structure and relevance to information chunks, making it easier to share and use.

- Taxonomies (hierarchical information trees) classify information and aid retrieval, like a library catalog.

LECTURE 26

Topic 102: Three Forms of Metadata

- Metadata can be created by:
  1. Dedicated personnel (catalogers): trained professionals who create metadata for a living.
  2. Authors (e.g., Dublin Core): creators of content who add metadata to their work.
  3. Users (folksonomy, social bookmarking): people who add tags and keywords to content, creating a collective vocabulary.

Example: A library cataloger adds metadata to a book's record, while a blogger adds keywords to their post. Users on a social bookmarking site like Furl or Citeulike add tags to shared resources.

Topic 103: Groupware and Collaboration Tools

- Groupware helps groups organize activities and communicate effectively.
- Examples:
  - Email: sends messages between individuals or groups.
  - Videoconferencing: enables virtual meetings.
  - Chat rooms: facilitate real-time text-based discussions.
  - Social media: connects people and enables knowledge sharing.
- Collaboration technologies:
  - Workgroup productivity software: helps teams work together on projects.
  - Email: enables communication and file sharing.
  - Newsgroups: facilitate discussions around specific topics.

Topic 104: Taxonomy of Groupware

- Categories of groupware:
    1. Electronic mail and messaging: email, instant messaging.
    2. Group calendaring and scheduling: shared calendars, meeting schedulers.
    3. Electronic meeting systems: videoconferencing, virtual whiteboards.
    4. Desktop video conferencing: virtual face-to-face meetings.
    5. Group document handling: collaborative writing, file sharing.
    6. Workflow systems: automate business processes, track progress.
    7. Collaborative writing systems: enable multiple authors, track changes.
    8. Shared whiteboards: virtual spaces for brainstorming, drawing.

Topic 105: Wikis

- Wikis are web-based software for open editing and content creation.
- Anyone can add, edit, or correct information, making wikis a collaborative space.
- Types of wikis:
    - Public wikis (e.g., Wikipedia): open to anyone, often used for knowledge sharing.
    - Corporate wikis (for project management and communication): used within organizations.

Example: A team uses a wiki to collaborate on a project, sharing information and updates.

Topic 106: Social Media and Web 2.0

- Social media and Web 2.0 are collaborative technologies for knowledge management.

- Social network analysis (SNA) maps relationships and flows between people, groups, and organizations.

- Social media in KM toolkit:

  - Wikis: collaborative content creation.

  - Google Docs: cloud-based document sharing and collaboration.

  - Video- and photo-sharing websites: share multimedia content.

  - Social network websites: connect people, enable knowledge sharing.

- Characteristics of Web 2.0:

  - User control: users create and manage content.

  - Services instead of software: cloud-based applications.

  - Collective intelligence: harnessing the power of collective knowledge.

Example: IBM uses social media to promote knowledge sharing and collaboration among employees, customers, and partners.

LECTURE 27

Topic 107: KM 2.0

- KM 2.0 is a people-centric approach to knowledge management, similar to Web 2.0.

- It focuses on user participation, knowledge sharing, and collaboration.

- Examples:

  - Social media platforms for knowledge sharing.

  - Collaborative documentation and content creation.

  - Feedback and revision of knowledge content.

Topic 108: Networking Technologies Knowledge Repository

- A knowledge repository is a digital library of expertise, knowledge, and experiences.

- It collects, summarizes, and integrates knowledge from various sources.

- Types:

  - External repositories (competitive intelligence).

  - Structured internal repositories (research reports, market analysis).

  - Informal internal repositories (lessons learned, best practices).

- Software: content management tools like SharePoint, document management systems.

Topic 109: Knowledge Acquisition and Application Tools

- Tools for understanding and applying knowledge:

  - E-learning systems (online courses, training modules).

  - Databases of best practices, lessons learned, and expert stories.

  - Expert systems and decision support systems (AI-powered decision-making).

  - Adaptive technologies for personalized content recommendations.

  - Recommender systems (suggesting relevant content).

  - Knowledge maps and visualization tools (illustrating relationships between concepts).

  - Artificial intelligence for automating processes (text summarization, content classification).

Topic 110: Intelligent Filtering Tools

- Intelligent agents are software programs that assist and act on behalf of users.

- They help manage information overload and provide personalized support.

- Features:

- Autonomy (acting independently).
- Social ability (interacting with humans and other agents).
- Responsiveness (responding to changes and requests).
- Personalization (adapting to user preferences).
- Initiative (taking proactive actions).
- Adaptivity (learning from experience).
- Cooperation (collaborating with users and other agents).

- KM applications:
  - Personalized information management (filtering email, recommending content).
  - Electronic commerce (locating products, comparing prices).
  - Process management (scheduling appointments, controlling air traffic).

- Categories:
  - Watcher agents (monitoring specific information).
  - Learning agents (tailoring to individual preferences).
  - Shopping agents (comparing prices).
  - Information retrieval agents (searching for information).
  - Helper agents (performing tasks autonomously).

LECTURE 28

Topic 111: Intelligent Filtering Tools

- Problem: Information overload and difficulty finding relevant information.
- Solution: Intelligent filtering agents that automatically sort and prioritize information, saving time and increasing productivity.
- Examples:
  - GrapeVine: Email filtering software that routes emails to the right person.

- Maxims: Learning agent that prioritizes emails based on user behavior.
- Copernic: Search engine that consults multiple search engines to provide comprehensive results.
- Cybersitter: Content blocking software that restricts access to inappropriate websites.
- ANZSI: Automated website indexing software that organizes and categorizes websites.
- Mobicip: Real-time content filtering agent that blocks inappropriate content on devices.

Topic 112: Personal Knowledge Management (PKM)

- PKM is essential in the future of KM to manage personal knowledge and information, making it easily accessible and useful.
- Technologies for PKM:
  - Email: Managing emails and contacts.
  - Blogs: Sharing knowledge and experiences.
  - News aggregators: Collecting and organizing news articles.
  - Instant messaging: Real-time communication and collaboration.
  - Wikis: Creating and sharing knowledge bases.
  - Personal portal: Customizing and organizing information.

Topic 113: Adaptive Technologies

- Adaptive technologies customize content and interfaces based on user behavior, improving user experience and efficiency.
- Customization: Manual changes by users to tailor their environment.
- Personalization: Automatic changes based on observed behavior, such as:
  - MS Office applications that reorder menu items based on frequency of use.

- Recommender systems like Amazon that suggest products based on user purchases.

- Personalized search results based on search history.

Topic 114: Knowledge Management Strategy

- KM strategy provides building blocks for organizational learning and improvement, enabling innovation and competitiveness.

- Types of KM initiatives:

  - External structure initiatives: Gaining knowledge from customers, partners, or competitors.

  - Internal structure initiatives: Building a knowledge-sharing culture, capturing tacit knowledge, and measuring knowledge-creating processes.

  - Competence initiatives: Creating careers based on KM, learning from simulations, and pilot projects.

- Sources of tacit knowledge:

  - Discovery (innovation): New ideas and insights.

  - Organizational practices: Lessons learned from projects and experiences.

  - Human resources: Expertise and know-how of employees.

- Key drivers for KM strategy:

  - Imminent retirement of key personnel: Capturing their knowledge and expertise.

  - Need for innovation: Staying competitive in a dynamic market.

  - Need for internal efficiencies: Reducing costs and improving productivity.

- Resources needed for KM strategy:

  - KM expert: Developing and implementing KM strategy.

  - Access to knowledgeable personnel: Capturing tacit knowledge and expertise.

  - KM advocate: Promoting KM strategy to senior management and stakeholders.

LECTURE 29

Topic 115: Developing a KM Strategy

- A KM strategy helps answer:
  - Which KM approach brings most value?
  - How to prioritize alternatives with limited resources?
- Components:
  - Business strategy and objectives
  - Knowledge-based business issues
  - Inventory of knowledge resources
  - Analysis of recommended KM projects

Topic 116: Knowledge Audit

- Identifies core knowledge assets, gaps, and flows
- Outcomes:
  - Core knowledge assets and flows
  - Gaps in information and knowledge
  - Areas for improvement in information policy and ownership
  - Opportunities to reduce costs and improve access to information
  - Contribution of knowledge to business results

Topic 117: Capability Maturity Models

- Measures organizational readiness for KM
- Five evolutionary stages:
  - Initial (ad-hoc processes)

- Repeatable (basic processes established)
- Defined (all processes defined and standardized)
- Managed (processes measured and improved)
- Optimizing (continuous process improvement)

Topic 118: Stages of Organizational Maturity

- Five stages:
  - Chaotic (non-cohesive culture)
  - Ad hoc (multiple local cultures)
  - Organized (similar local cultures)
  - Managed (cohesive corporate culture)
  - Agile (culture adapts strategically)

Topic 119: Infosys KM Maturity Model

- Based on CMM, five levels:
  - Default (dependence on individual skills)
  - Reactive (ability to perform tasks repeatedly)
  - Aware (restricted data-driven decision making)
  - Convinced (quantitative decision making)
  - Sharing (ability to manage organizational competence quantitatively)

LECTURE 30

Topic 120: Knowledge Process Quality Model (KPQM)

- Improves knowledge processes by enhancing management structures

- Five phases:
    1. Initial (chaotic)
    2. Aware (initial structures)
    3. Established (systematic structure)
    4. Quantitatively Managed (performance measures)
    5. Optimizing (continuous improvement)

Topic 121: Forrester Group KM Maturity Model

- Describes stages of maturity in supporting people throughout the KM cycle
- Three stages:
    1. Assisted (culture adapts strategically)
    2. Self-service (employees codify and find info independently)
    3. Organic (KM embedded in business, info provided when needed)

Topic 122: CoP Maturity Model

- Applied to community of practice lifecycle
- Serves as a roadmap to move communities to the next stage
- CoP lifecycle model:
    - Shows need for maturing and stewardship of knowledge
    - Provides diagnostic for informal networks
    - Aligns KM roles and responsibilities

Topic 123: Gap Analysis

- Analyzes difference between existing and desired KM state

- Points to address:
  - Differences between current and desired KM states
  - Barriers and enablers to KM implementation
  - Opportunities for collaboration and risk analysis
  - Redundancies, knowledge silos, and industry ranking
- Ways of gap analysis:
  - Surveys, interviews, and focus groups
  - Validation of results with stakeholders

LECTURE 31

Topic 124: KM Strategy Roadmap

- A plan for managing knowledge over 3-5 years
- Answers questions like:
  - How to improve knowledge management
  - Priorities for content and communities
  - Linking knowledge management to business goals
  - Quick wins and long-term success

Topic 125: Balancing Innovation and Organizational Structure

- Fluid organization: encourages creativity and innovation
- Institutionalized organization: structures work and controls processes
- Need balance between:
  - Encouraging innovation and creativity
  - Having structure and accountability

Topic 126: Types of Knowledge Assets Produced

- Intellectual assets: intangible assets like brands and know-how
- Intellectual capital: knowledge and ability to use it
- Two types:
  - Body of knowledge
  - Resources to support knowledge
- Categories:
  - Human capital (employee knowledge)
  - Structural capital (policies and procedures)
  - Customer capital (customer relationships)

Topic 127: Role of Leadership in KM

- Leaders shape culture and encourage knowledge sharing
- Leadership styles:
  - Autocratic (decide without input)
  - Democratic (involve others in decisions)
  - Task-oriented (focus on tasks)
  - People-oriented (focus on employees)
- Knowledge-oriented leadership:
  - Encourages knowledge sharing and innovation
  - Supports efficiency and innovation goals

LECTURE 32

Topic 128: Evaluating Knowledge Management

- Tracking progress towards organizational goals
- Various goals:
  - Increase revenue
  - Reduce costs
  - Improve operational efficiency
  - Enhance customer satisfaction
  - Encourage innovation
- Questions to ask when developing a KM measurement strategy:
  - Why are we measuring KM outcomes? (purpose)
  - What specific KM outcomes are we measuring? (metrics)
  - Who are the stakeholders that care about these outcomes? (audience)
  - When are we measuring KM outcomes? (frequency)
  - How are we measuring KM outcomes? (methods)

Topic 129: KM Return on Investment and Metrics

- Skandia Intellectual Capital Model:
  - Financial focus (e.g., revenue growth)
  - Customer focus (e.g., satisfaction)
  - Process focus (e.g., efficiency)
  - Renewal and development focus (e.g., innovation)
- KM measurement process:
  - Define specific business objectives addressed by KM initiative
  - Identify stakeholders and their information needs
  - Choose appropriate measurement framework
  - Modify framework as needed
  - Collect and analyze data

- Present results to stakeholders

Topic 130: Benchmarking

- Finding best practices in the industry to improve performance
- Types of benchmarking:
  - Internal (compare within organization)
  - External (compare with other companies)
  - Industry group measurements (compare with industry averages)
  - Best practice studies (identify leading practices)
  - Cooperative benchmarking (collaborate with partner company)
  - Competitive benchmarking (analyze competitors without collaboration)

Topic 131: Benefits of Benchmarking

- Improves productivity and efficiency
- Enhances service quality and customer satisfaction
- Reduces time to market and costs
- Improves relationships and process management
- Steps in benchmarking process:
  - Identify specific processes or practices to benchmark
  - Form a benchmarking team
  - Select benchmarking partners (if external)
  - Collect and analyze data
  - Identify areas for improvement and make changes
  - Repeat benchmarking process to measure progress

LECTURE 33

Topic 132: Balanced Scorecard Method

- A system to clarify and achieve vision and strategy:
  - Translates vision into actionable goals
  - Ensures alignment with organizational strategy
- Balances:
  - Short-term and long-term goals:
    - Ensures focus on both immediate and future needs
  - Financial and non-financial measures:
    - Includes both quantitative and qualitative metrics
  - Internal and external perspectives:
    - Considers both organizational and customer views
  - Lagging and leading indicators:
    - Includes both outcome metrics and performance drivers
  - Objective and subjective measures:
    - Uses both data-driven and opinion-based metrics
- Four dimensions:
  - Financial (e.g., operating income, ROI):
    - Focuses on financial performance
  - Customer (e.g., satisfaction, loyalty):
    - Prioritizes customer needs and expectations
  - Internal business process (e.g., cost, quality, efficiency):
    - Evaluates process effectiveness and efficiency
  - Learning and growth (e.g., employee satisfaction, skills, innovation):
    - Encourages learning, development, and innovation

Topic 133: Implementation of Balanced Scorecard Metric

- Translate vision and strategy into measurable goals:
  - Ensure goals are specific, measurable, achievable, relevant, and time-bound (SMART)
- Validate and communicate goals:
  - Involve stakeholders in goal-setting and communication
- Link goals to reward system:
  - Ensure alignment between goals and incentives
- Ensure measurable objectives:
  - Use quantifiable metrics wherever possible
- Incorporate learning and feedback:
  - Regularly review and adjust goals and metrics
- Components:
  - Objectives (major goals):
    - High-level targets
  - Metrics (parameters to measure progress):
    - Quantifiable measures
  - Targets (specific thresholds):
    - Specific values or ranges for metrics
  - Initiatives (actions to achieve goals):
    - Projects, programs, or activities

Topic 134: House of Quality Method

- Links customer needs to business processes and decisions:
  - Ensures customer-centric approach

- Also known as Quality Function Deployment (QFD):
  - A structured approach to linking customer needs to organizational processes
- Key elements:
  - Desired outcomes:
    - Customer needs and expectations
  - Priorities:
    - Relative importance of outcomes
  - Metrics:
    - Quantifiable measures of outcome achievement
- Focuses on:
  - Maximizing customer satisfaction:
    - Prioritizes customer needs and expectations
  - Delivering value by meeting customer needs:
    - Ensures customer-centric approach
- Assessing desired outcomes:
  - Specific, concrete, and measurable:
    - Ensure clear and actionable goals

Topic 135: Popular House of Quality Metrics

- Expense of reinventing solutions:
  - Cost of duplicating existing knowledge or solutions
- Information seeking time:
  - Time spent searching for existing knowledge or solutions
- Number of implemented ideas:
  - Quantity of ideas put into practice
- Time spent on capturing know-how:

  - Effort dedicated to documenting and sharing knowledge
- Employee awareness of KM:
  - Percentage of employees familiar with KM practices and tools

House of quality indicaters

- Competence development expenses:
  - Investment in employee learning and development
- Employee satisfaction:
  - Measure of employee engagement and satisfaction
- Time spent on packaging know-how:
  - Effort dedicated to organizing and disseminating knowledge
- Training expenses:
  - Investment in employee training and development
- Information gathering expenses:
  - Cost of collecting and processing information
- Total patents held:
  - Number of patents owned by the organization
- Employee attrition rate:
  - Percentage of employees leaving the organization
- Value of loss per employee:
  - Estimated cost of losing an employee (e.g., recruitment, training)

LECTURE 34

Topic 136: Results-Based Assessment Framework (RMAF)

- A framework to assess performance and results
- Also known as "results map" or "results chain"
- Attributes:

- Results chain: Connects resources and activities to changes
- Activities: Actions taken in a project
- Immediate outcomes: Short-term effects
- Intermediate outcomes: Medium-term results
- Final outcomes: Long-term impact
- Indicators: Metrics to measure progress

Topic 137: Measuring the Success of Knowledge Networks

- Types of value created by CoPs:
  - Structural value: Connections and interactions
  - Relational value: Maintenance and reciprocity
  - Cognitive value: Commonality and cohesiveness
- Sample questions to measure success:
  - What would have happened without the CoP?
  - Did you save time or find answers more quickly?
  - Has your decision-making confidence increased?
- Social Network Analysis (SNA):
  - Maps network interactions and identifies "hidden experts"
- Time-use studies:
  - Measure productivity and time saved by CoP members

Evaluating a CoP

- Ways to evaluate a CoP:
  - Health: Number of participants and community activity
  - Outcomes: Individual and group benefits
  - Impact: Return on investment and time saved

Topic 138: Benefits of a Community of Practice

- Benefits to an Individual:
  - Increased skills and know-how
  - Increased personal productivity
  - Increased job satisfaction
  - Enhanced personal reputation
  - Increased sense of belonging
- Benefits to a Group:
  - Increased access to knowledge and resources
  - Easier consensus and faster problem solving
  - Enhanced community reputation and trust
- Benefits to an Organization:
  - Improved operational efficiency
  - Increased cost savings and avoidance of problems
  - Improved quality and speed of service
  - Increased employee retention

Topic 139: Organizational Learning and Memory

- Importance of capturing and transferring knowledge:
  - Prevents "corporate amnesia"
  - Retains valuable knowledge and expertise
- Need for a proactive approach to manage organizational memory:
  - Ensures knowledge is retained and accessible

LECTURE 35

Topic 140: Organizational Learning and Memory

- How organizations learn and remember from past experiences, successes, and failures

- Organizational learning: a process of improving over time by sharing innovations, best practices, and lessons learned, and avoiding repeated mistakes

- Technological container: a documentation process that captures what works and what doesn't, such as SharePoint, knowledge repositories, or intranets

- Organizational memory (OM): a centralized system that stores and manages the collective knowledge, experiences, and best practices of the organization, making it easily accessible and reusable

Topic 141: Learning Organization

- A type of organization that successfully implements organizational learning processes, leading to improved efficiency, effectiveness, competitiveness, and viability

- Key attributes:

  - Mental models: individual understandings and decision-making frameworks that shape how we perceive and interact with the world

  - Shared vision: shared mental models and values that create a common purpose and direction

  - Personal mastery: a commitment to lifelong learning, self-improvement, and professional development

  - Team learning: fostering individual learning and collaboration to achieve common goals

  - Systems thinking: seeing the organization as a connected whole, understanding how parts interact and impact each other

Topic 142: Management of Organizational Memory

- Capturing, organizing, disseminating, and reusing knowledge created by employees to improve organizational performance and innovation

- Reasons to create an organizational memory:

  - Preventing organizational forgetting and incompetence, reducing the risk of losing valuable knowledge and expertise

  - Enhancing knowledge sharing and communication, breaking down silos and improving collaboration

  - Supporting governance and compliance, ensuring that knowledge is accurate, up-to-date, and accessible

  - Increasing transparency, accountability, and trust, fostering a culture of openness and sharing

Topic 143: Barriers to an Organizational Memory System

- Cultural barriers:

  - Focus on artifacts over process, prioritizing tangible outputs over intangible knowledge and experiences

  - Resistance to knowledge capture and reuse, due to fear of litigation, job security, or additional workload

- Technical barriers:

  - Difficulty in capturing and retrieving knowledge, due to inadequate tools, processes, or infrastructure

  - Ensuring relevance and intelligibility of retrieved knowledge, making sure it is accurate, up-to-date, and useful

LECTURE 36

Topic 144: Organizational Learning

- Processes for populating organizational memory and retrieving valuable knowledge

- Key successes and failures with generalization potential are processed, including:
    - Best practices
    - Lessons learned from projects and initiatives
    - Innovations and improvements
    - Challenges and failures

- Lessons learned are defined as knowledge gained from experience, positive or negative, and are essential for improving organizational performance and innovation

Topic 145: Lessons Learned Process by USGAO

- Collection: Capture lessons through various means, such as:
    - After-action reviews
    - Project postmortems
    - Meetings and debriefings
    - Training evaluations
    - Surveys and feedback
- Verification: Validate lessons for accuracy and applicability, ensuring they are:
    - Relevant
    - Reliable
    - Useful
- Storage: Store approved lessons in an accessible database or repository, with proper:
    - Categorization
    - Indexing
    - Formatting

  - Structure

- Dissemination: Actively share lessons with potential users, through various channels, such as:
  - Training programs
  - Workshops and seminars
  - Online platforms
  - Communities of practice

Topic 146: Lessons Learned Process by Milton and Others

- Reflect on experiences and identify key learning themes, including:
  - Successes and challenges
  - Best practices and areas for improvement
  - Lessons learned and recommendations
- Analyze and generalize lessons, considering:
  - Root causes
  - Context and circumstances
  - Implications and applications
- Apply lessons learned to change procedures or guidelines, and:
  - Improve processes and performance
  - Enhance innovation and competitiveness
  - Strengthen organizational memory and learning
- Document and disseminate lessons learned, using various methods, such as:
  - Reports and case studies
  - Presentations and workshops
  - Online platforms and communities

Topic 147: Managing Lessons Learned

- Approaches: Various methods for managing lessons learned, including:
  - After action reviews (AARs)
  - Project postmortems (PPMs)
  - Reporting systems
  - Communities of practice
- Basic questions to ask, including:
  - What was planned and what happened?
  - What went well and what didn't?
  - What would we do differently?
  - What should we keep doing or avoid repeating?
  - What are the implications and applications?
- Effective management of lessons learned enables organizations to:
  - Improve performance and innovation
  - Enhance organizational memory and learning
  - Strengthen competitiveness and sustainability

LECTURE 37

Topic 148: Lessons Learned Systems

- A central repository for documenting and sharing lessons learned, making it easier to access and reuse knowledge
- Goal: Preserve valuable knowledge and experiences to improve future performance, reduce errors, and enhance innovation
- Technology: Database with searchable entries and metadata, such as keywords, tags, and categories

- Effective systems require descriptive metadata and user-friendly search functionality, ensuring easy access and application of lessons learned

Topic 149: Benefits of Lessons Learned

- Reflective thinking and evaluation of efficiency and effectiveness, leading to improved processes and performance
- Improved project management and decision-making, enabling better resource allocation and risk assessment
- Contribution to innovation and strategic planning, fostering competitiveness and sustainability
- Benchmarking and risk assessment, facilitating informed decision-making and mitigation of potential errors
- Enhanced organizational learning and memory, promoting a culture of continuous improvement

Topic 150: Challenges to Lessons Learned

- Capturing lessons learned can be difficult due to various barriers, including:
    - Psychological barriers: fear of admitting errors, lack of motivation, and reluctance to reflect on past experiences
    - Team-based barriers: poor team dynamics, lack of trust, and ineffective communication
    - Epistemological barriers: difficulty in abstracting and generalizing lessons from specific experiences
    - Managerial barriers: lack of support, inadequate resources, and insufficient time for reflection
- Common obstacles include fear of admitting errors, lack of motivation, and poor team dynamics, highlighting the need for a supportive culture and effective facilitation

Topic 151: Recommendations for Lessons Learned

- Establish a lessons learned manager and coordination system, ensuring accountability and oversight
- Develop an implementation plan for knowledge management, integrating lessons learned into organizational processes
- Enhance search functionality and user input, facilitating easy access and contribution of lessons learned
- Track and report on effectiveness using performance metrics, monitoring progress and identifying areas for improvement
- Encourage mentoring, storytelling, and incentives for sharing lessons, fostering a culture of knowledge sharing and collaboration

Topic 152: Organizational Learning and Organizational Memory Models

- Stages in knowledge processing:
  - Internalization: knowledge is learned and understood by individuals
  - Externalization: knowledge is shared and exchanged with others
  - Objectification: shared knowledge is accepted and institutionalized as organizational knowledge
- Valuable knowledge resources:
  - Innovation: improved practices and policies
  - Post-mortem analysis: identifying lessons from project failures
  - Reusable knowledge objects: templates, boilerplates, and existing solutions
- Knowledge access and use: ability to find and apply organizational knowledge, enabling informed decision-making and improved performance
- Types of knowledge resource reuse:
  - Routine tasks: applying existing solutions to repetitive tasks

- Knowledge synthesis: combining existing knowledge to create new insights and innovations

- Innovation: generating new knowledge and practices

- Models of organizational learning and knowing:

- Wilson's model: information user experiences an information need, leading to information transfer and exchange

- Choo's theory: organizational knowing is mediated, situated, provisional, pragmatic, and contested

- Crossan's 4I Framework: intuiting, interpreting, integrating, and institutionalizing knowledge

LECTURE 38

Topic 153: Assessment Frameworks

- Various frameworks evaluate organizational learning, including:

- Probst and Buchel's Framework: assesses knowledge (number of learning instruments), ability (learning level), and intention (willingness to learn)

- Marquardt's Framework: evaluates speed (learning cycle completion), depth (learning achievement), and breadth (knowledge transfer)

- Lessons Learned Maturity Model: assesses organizational learning maturity across five levels (initial, repeatable, defined, managed, optimized)

Topic 154: Best Practices of Learning Organizations

- Self-mastery: personal responsibility for learning and growth

- Positive reinforcement: recognition and rewards for learning achievements

- Sharing experiences: knowledge sharing and collaboration

- Emphasis on feedback: regular feedback for improvement

- Mental models: shared understanding and mindset

- Time for learning: allocated time for learning and reflection
- Reflective openness: open communication and feedback
- Forgiveness: learning from mistakes and failures
- Shared vision: common goals and objectives
- Participative openness: involvement in decision-making and learning
- Trust: trust in leadership and colleagues
- Empathy: understanding and support for each other
- Cooperation: teamwork and collaboration
- Team learning: collective learning and growth
- Consensus building: agreement and commitment to learning
- Creative thinking: innovative and creative problem-solving

Topic 155: Knowledge Continuity Management

- Identifies valuable knowledge at risk of being lost due to employee departure (retirement, turnover, etc.)
- Human capital and knowledge are critical assets that can leave or be lost, impacting organizational performance and competitiveness
- Issues of knowledge loss include:
    - Retirement: loss of experienced employees and their knowledge
    - Turnover: loss of employees and their knowledge
    - Generational gaps: differences in knowledge and work styles between generations

Topic 156: Knowledge Continuity Management Process

- KCM is a top-down process starting with senior management commitment and support

- Three-step process:
    1. Scoping: identify critical knowledge and its location
    2. Documenting and transferring: transfer knowledge to other employees or documents
    3. Integrating: embed transferred knowledge into organizational processes and memory
- Ensures critical knowledge is retained and transferred to other employees, reducing knowledge loss risks

Topic 157: Knowledge Continuity Management Cycle

- Identify knowledge at risk: determine critical knowledge and its location
- Location or containers of knowledge: document or tacit knowledge
- Recipients of knowledge: identify employees who need the knowledge
- Select transfer mechanisms: choose appropriate transfer methods (training, mentoring, etc.)
- Design a schedule: plan and schedule knowledge transfer
- Develop metrics: measure knowledge transfer effectiveness
- Conduct knowledge transfer: transfer knowledge to recipients
- Validate knowledge: ensure transferred knowledge is accurate and useful
- Preserve knowledge: store transferred knowledge in organizational memory for future use

Topic 158: Identifying Critical Knowledge

- Critical knowledge is strategic, at risk of being lost, and possessed by few employees
- Types of critical knowledge:
    - Subject matter expertise: specialized knowledge in a specific area

- Business relationships: knowledge of customers, partners, and suppliers
- Organizational knowledge: knowledge of company history, culture, and policies
- Governance: knowledge of legal, regulatory, and compliance requirements

- Criteria to assess critical knowledge:
  - Specificity: how unique is the knowledge to the organization?
  - Localization: how many employees possess the knowledge?
  - Complexity: how difficult is the knowledge to learn and apply?
  - Consequences of loss: what are the impacts of losing the knowledge?

LECTURE 39

Topic 159: Selecting the KCM Strategy

- Choose the right knowledge transfer and retention strategy based on whether the knowledge is tacit (experiential, difficult to articulate) or explicit (documented, easily transferable) and the time available.

- Approaches for tacit knowledge transfer include:
  - After-action reviews: reflect on project experiences and lessons learned
  - Mentoring: pair experienced employees with newer ones for guidance and support
  - Storytelling: share experiences and lessons learned through narratives

- Techniques for explicit knowledge transfer include:
  - Documentation: write down processes, procedures, and best practices
  - E-learning: create online courses and training programs
  - Wikis: create online repositories of knowledge and information

Topic 160: Handover Procedures

- Handover procedures ensure a smooth transition of knowledge and responsibilities when an employee leaves or changes roles.

- Use a checklist or structured notes to cover important processes, including:

  - Time-sensitive tasks and deadlines

  - Key contacts and stakeholders

  - Tips and advice for success

  - Important documents and resources

- Introduce the new employee to key contacts and provide access to useful resources, such as:

  - Company intranet and knowledge management systems

  - Expert networks and communities of practice

  - Training and development programs

Topic 161: Three-Tiered Approach to Knowledge Continuity

- Address knowledge transfer at individual, group, and organizational levels to ensure comprehensive coverage.

- Produce tangible legacy materials and feed them into the corporate storehouse of intellectual capital, including:

  - Individual level:

    - Structured interviews with experts

    - Tangible by-products like maps, glossaries, and interview transcripts

  - Group level:

    - Facilitated workshops with communities of practice

    - Tangible by-products like workshop notes, knowledge repositories, and social network maps

  - Executive level:

    - Storytelling workshops and individual interviews with key executives

- Tangible by-products like maps of intellectual assets, organizational lexicons, and springboard stories

Topic 162: General Preferences of Four Generations

- Four generations in the workforce have unique traits, values, and work styles, including:
  - Matures (1925-1945): loyal, respectful of authority, and value hard work
  - Baby Boomers (1945-1965): optimistic, team-oriented, and value personal growth
  - Generation X (1966-1980): independent, flexible, and value work-life balance
  - Millennials (1981-): tech-savvy, collaborative, and value feedback and flexibility
- Understand these differences to effectively manage and transfer knowledge across generations.

Topic 163: Intergenerational Knowledge Transfer

- Knowledge sharing between generations requires understanding their differences and adapting KCM approaches to individual and organizational needs.
- Examples of effective intergenerational knowledge transfer include:
  - Transparent leadership and technology infrastructures for Baby Boomers to Generation X transfer
  - Using summaries and YouTube videos for Millennials
  - Pairing experienced employees with newer ones for mentoring and guidance
  - Creating opportunities for socialization and knowledge sharing across generations.

LECTURE 40

Topic 164: Best Practices in Knowledge Continuity Management

- Create a comprehensive strategy and process to protect critical knowledge, involving business leaders and KM professionals.
- Identify critical knowledge through a combination of top-down and grassroots approaches, considering business objectives and expert input.
- Capture and transfer knowledge using various methods (e.g., mentoring, documentation, training), considering the nature of the knowledge and the audience.
- Make knowledge accessible through multiple channels (e.g., knowledge bases, communities of practice), providing easy access and encouraging contribution.
- Embed knowledge champions and change agents in the business to drive KCM efforts and measure their impact.
- Ensure knowledge is applied and used, tracking metrics such as improved decision-making, innovation, and competency development.

Topic 165: Success Factors for Knowledge Continuity Management

- Build a knowledge sharing culture by promoting trust, empathy, and collectivism, recognizing and rewarding knowledge sharing behaviors.
- Establish mentoring programs that pair experienced employees with newer ones, encouraging knowledge transfer and development.
- Encourage teamwork and collaboration across generations, functions, and locations, fostering a sense of community and shared purpose.
- Measure KCM success through metrics such as competency development, decision-making improvement, and innovation, adjusting strategies accordingly.

Topic 166: Challenges for Knowledge Continuity Management

- Overcome difficulties in transferring knowledge due to lack of absorptive capacity, trust, and motivation, addressing these underlying issues.

- Manage cultural, language, and work value differences, finding common ground and using inclusive approaches.

- Provide incentives and rewards for knowledge sharing, recognizing and valuing contributions.

- Address difficulty in articulating knowledge and lack of methods and tools for transfer, providing training and support.

Topic 167: TFPL Guide of KM Skills

- Develop time management and learning techniques to acquire knowledge effectively, prioritizing learning and reflection.

- Cultivate advocacy, inquiry, and networking skills to share knowledge and build relationships.

- Develop IT skills to record, disseminate, and retrieve information efficiently.

- Practice cooperative problem-solving and open dialogue to collaborate and build trust.

- Embrace flexibility and willingness to try new things, take risks, and learn from mistakes.

Topic 168: Seven Categories of KM Skills

- Retrieve information through searching, asking questions, and seeking expertise.

- Evaluate information for quality, relevance, and reliability, considering multiple sources.

- Organize information using various tools and methods (e.g., taxonomies, databases), making it easily accessible.

- Analyze information to deduce relationships, meaning, and insights, using tools like data analytics and visualization.

- Present information effectively, using clear communication and visualization techniques.

- Secure information through confidentiality, quality measures, and data protection practices.

- Collaborate around information, using technology and principles of effective collaborative work, such as shared goals and open communication.

Topic 169: Major Categories of KM Roles

- Strategic roles: chief human capital officer, human capital retention manager, overseeing KCM strategy and implementation.

- Senior and middle management roles: chief knowledge officer, knowledge manager, responsible for KCM operations and programs.

- Knowledge leaders: KM champions, promoting KCM and building a knowledge sharing culture.

- Knowledge managers: acquiring, organizing, and disseminating knowledge, ensuring its quality and accessibility.

- Knowledge navigators: knowledge brokers, connecting people to knowledge and expertise.

- Knowledge synthesizers: knowledge stewards, facilitating knowledge capture and transfer.

- Content editors: content managers, responsible for structuring and disseminating content.

- Learning-oriented roles: trainers, facilitators, mentors, coaches, developing knowledge and skills.

- Human resources roles: developing knowledge-oriented cultures and behaviors, supporting KCM efforts.

LECTURE 41

Topic 170: Senior Management Roles

- Chief Knowledge Officer (CKO) or Chief Learning Officer (CLO) play a crucial role in driving knowledge management strategies and practices across the organization.

- CKO responsibilities include:

  - Maximizing returns on knowledge investments, such as people, processes, and intellectual capital.

  - Exploiting intangible assets, like know-how, patents, and customer relationships.

  - Promoting knowledge sharing and collaboration across the organization.

  - Measuring the value of knowledge and KM practices.

- CLO responsibilities include:

  - Leading cultural transformation and learning initiatives.

  - Ensuring learning is leveraged across the organization.

  - Addressing skill deficiencies and promoting knowledge sharing.

Topic 171: Sample Job Description

- Knowledge and Information Manager responsibilities include:

  - Systematically recording and storing health-related information and expertise.

  - Packaging organizational expertise and health information for various clients.

  - Maximizing usability and usefulness of health resources and information products.

  - Promoting the meaning and purpose of information and knowledge resources.

  - Ensuring easy access and retrieval of information and knowledge resources.

- Selection criteria include:

  - Tertiary qualifications in a relevant field (e.g., Information Science, KM).

  - In-depth appreciation of IT capabilities and limitations.

  - Ability to manage knowledge and information via online databases, collaborative technologies, and web-based services.

- Understanding of knowledge processes (e.g., organizational learning and development).

- Excellent computer skills, preferably with database and website management experience.

Topic 172: KM Roles Within Organizations

- Various KM roles exist within organizations, including:

  - Designing information systems (e.g., databases, interfaces, networking).

  - Managing information systems (e.g., maintaining data integrity, updating systems).

  - Information resources management (e.g., supporting organizational missions, competitive advantage).

  - Training (e.g., coaching, mentoring, community of practice support).

  - Information agencies (e.g., advising, guiding on information use).

  - Competitive intelligence (e.g., gathering and analyzing intelligence for decision-making).

  - Customer relations for information systems/technology.

  - Designing and producing information services and products (e.g., databases, multimedia products).

  - Knowledge journalism (e.g., gathering and coding tacit knowledge).

  - Organizational information and KM policy analysis.

Topic 173: KM Job Titles

- Various KM job titles exist, including:

  - Knowledge harvester (elicits tacit knowledge from experts).

  - Knowledge analyst (links user needs to knowledge provision).

  - Knowledge editor (refines explicit knowledge for user orientation).

- Knowledge navigator (knows knowledge repositories and expertise locations).
- Knowledge broker (connects knowledge seekers with knowledge providers).
- Knowledge gatekeeper (directs external knowledge to relevant areas).
- Knowledge steward (custodian of knowledge resources).
- Knowledge facilitator (encourages knowledge sharing and collaboration).

Topic 174: KM Profession

- Knowledge management is an emerging profession with:
  - University programs and degree offerings (e.g., undergraduate, graduate, doctoral).
  - Certification initiatives (e.g., KMPro, KMBA).
  - Professional associations (e.g., KMPro, IAKM, SLA).
  - Diverse degree titles (e.g., computer science, management, library and information in science).
  - Growing recognition as a bona fide field of professional practice.

LECTURE 42

Topic 175: Where Does KM Belong In the Organization?

- KM teams can be found in various business units, such as:
  - Information Technology (IT)
  - Human Resources (HR)
  - Training and Development
  - Strategy and Innovation
- Organizations with KM emphasize:
  - Informal networking and collaboration

  - Distributed leadership and shared responsibility
  - A clear vision and set of plans/priorities that unify the organization
- Communities of practice and virtual teams facilitate knowledge sharing and collaboration across the organization.

Topic 176-177: Ethics of KM

- Ethics establish a framework for decision-making based on values, such as:
  - Respect for privacy and confidentiality
  - Honesty and transparency in knowledge sharing
  - Fairness and equity in access to knowledge
- An ethical code for professionals outlines standards for behavior, including:
  - Responsibility to society and the profession
  - Respect for colleagues and clients
  - Commitment to ongoing learning and improvement
- Types of ethics include:
  - Metaethics (investigating the nature of ethical principles)
  - Normative ethics (establishing moral standards)
  - Applied ethics (addressing specific ethical issues)
- KM promotes transparency, openness, and innovation, contributing to ethical business practices, such as:
  - Encouraging whistleblowing and speaking truth to power
  - Fostering a culture of accountability and responsibility
  - Supporting informed decision-making and risk management

Topic 178: Future Challenges for Knowledge Management

- Major challenges facing KM include:
  - People and cultural issues, such as:
    - Encouraging knowledge sharing and collaboration
    - Addressing resistance to change and cultural barriers
  - Overemphasis on technology, such as:
    - Focusing too much on IT solutions
    - Neglecting the human and cultural aspects of KM
  - Isolation from business goals, such as:
    - Failing to align KM with organizational objectives
    - Neglecting to measure the impact of KM on business outcomes
  - Ignoring content dynamics, such as:
    - Failing to update and refresh knowledge content
    - Neglecting to address the complexity and nuance of knowledge
  - Prioritizing quantity over quality, such as:
    - Focusing too much on collecting and storing knowledge
    - Neglecting to curate and validate knowledge for accuracy and relevance

Topic 179: Intellectual Property Issues

- Attribution and unwanted attribution concerns can be addressed through:
  - Document management and version control best practices
  - Clear policies and procedures for knowledge sharing and collaboration
- Copyleft and Creative Commons licenses offer alternative approaches to copyright laws, such as:
  - Allowing for open access and sharing of knowledge
  - Encouraging collaboration and innovation
- Permissions in Creative Commons licenses include:

- Attribution (requiring users to credit the original author)
- Share-alike (requiring users to license derivative works under the same terms)
- No derivatives (prohibiting users from modifying the work)
- Noncommercial (prohibiting users from using the work for commercial purposes)

LECTURE 43

Topic 180: Incentives for Knowledge Sharing

- Incentives encourage knowledge sharing, including:
  - Rewards (e.g., "knowledge sharer of the month", plaques, prizes, or promotions)
  - Recognition (e.g., public praise, awards, certificates, or media coverage)
  - Financial incentives (e.g., bonuses, salary increases, profit-sharing, or stock options)
  - Moral incentives (e.g., sense of self-esteem, respect, admiration, or gratitude)
- Categories of incentives:
  - Remunerative (financial rewards, tangible benefits)
  - Moral (recognition, respect, intangible benefits)
  - Coercive (punishment for not sharing, negative consequences)

Topic 181: Other Challenges for KM

- Some people doubt the future of KM due to:
  - Failures to deliver expected results (e.g., lack of ROI, limited adoption)
  - Underestimating the importance of people and culture in KM (e.g., neglecting training, ignoring organizational dynamics)

- Overemphasizing technology and neglecting the human factor (e.g., focusing on tools, ignoring user needs)

- To be proactive, organizations should:

  - Improve access to information and knowledge (e.g., through training, mentorship, or collaboration tools)

  - Promote knowledge sharing through various means (e.g., incentives, recognition, or communities of practice)

  - Network and cooperate internationally to leverage external knowledge (e.g., through partnerships, benchmarking, or joint research)

  - Develop local content and capacity building to address specific needs (e.g., through customization, adaptation, or innovation)

Topic 182: KM and Innovation

- KM facilitates innovation by:

  - Capturing and sharing information and knowledge (e.g., through documentation, training, or collaboration)

  - Encouraging collaboration and teamwork (e.g., through cross-functional teams, workshops, or brainstorming)

  - Managing complexity and making sense of disparate data (e.g., through analytics, visualization, or sense-making)

  - Integrating knowledge from various sources and disciplines (e.g., through interdisciplinary research, knowledge brokers, or innovation labs)

- Tacit knowledge is harder to articulate and duplicate, making it a competitive advantage. KM helps to uncover and leverage this hidden knowledge.

Topic 183: What's Next?

- The future of KM will involve:

- Increased collaboration and teamwork (e.g., through virtual teams, crowdsourcing, or open innovation)

- Synergy between information management and knowledge management (e.g., through integrated systems, data analytics, or information architecture)

- Focus on innovation, risk management, and ethics (e.g., through design thinking, experimentation, or responsible innovation)

- Challenges include:

- Information overload and difficulty in finding relevant information (e.g., through data literacy, information literacy, or search optimization)

- Cultural issues, such as resistance to change or lack of trust (e.g., through change management, communication, or trust-building)

- Technological issues, such as data silos or inadequate tools (e.g., through integration, interoperability, or technology development)

Topic 184: Benefits of Knowledge Management in Education

- KM improves services to students, staff, and faculty by:

- Providing timely and relevant information (e.g., through learning analytics, adaptive learning, or personalized recommendations)

- Enhancing research capabilities and minimizing turnaround time (e.g., through research information systems, collaboration tools, or grant management)

- Encouraging interdisciplinary research and collaboration (e.g., through research centers, institutes, or innovation hubs)

- Developing human capital, customer capital, organizational capital, innovation capital, and financial capital (e.g., through talent development, knowledge transfer, or innovation commercialization)

- KM helps educational institutions to stay competitive, innovative, and responsive to the needs of their constituents.

LECTURE 44

Topic 185: Benefits of Knowledge Management in Schools

- KM helps teachers:
    - Find and use information to improve teaching methods
    - Share ideas and best practices with colleagues
    - Reflect on feedback to improve student learning
    - Develop policies to enhance student outcomes
- KM helps schools:
    - Keep experienced teachers' expertise and knowledge
    - Support new teachers' development
    - Foster a culture of continuous learning and improvement
    - Lead to better student results, teacher growth, and collaboration

Topic 186: Challenges for Knowledge Management in Education

- Schools face challenges:
    - Providing accurate and reliable data
    - Integrating different information systems
    - Changing cultures and mindsets
    - Sustaining KM efforts despite changing priorities
- These challenges can lead to:
    - Information overload and poor data management
    - Poor decision-making and lack of accountability
    - Limited collaboration and innovation
    - Decreased morale and job satisfaction

Topic 187: Opportunities for Knowledge Management in Education

- Schools can:
  - Integrate KM to enhance learning, innovation, and improvement
  - Leverage existing social networks and communities
  - Embed KM into the school culture
  - Improve decision-making and student success
- KM can help schools:
  - Build a culture of knowledge sharing
  - Enhance reputation and attractiveness
  - Increase efficiency and effectiveness

Topic 188: KM and Strategic Planning in Schools

- Strategic planning:
  - Helps schools respond to changes and challenges
  - Requires effective planning, KM, and leadership
- Benefits:
  - Clarifies school goals and priorities
  - Coordinates decisions and actions
  - Addresses environmental challenges
- Effective strategic planning with KM can lead to:
  - Improved school performance and reputation
  - Enhanced teacher and student outcomes
  - Better resource management
  - Increased stakeholder engagement

Topic 189: Normative Model for KM Implementation in Schools

- Knowledge leadership:
  - Encourages innovation and risk-taking
  - Fosters a culture of trust and collaboration
- Building KM vision:
  - Develops a shared understanding of KM
  - Encourages dialogue and interaction
- Knowledge-sharing culture:
  - Encourages trust and collaboration
  - Fosters innovation and knowledge utilization
- Normative model:
  - Guides KM implementation
  - SECI model may be useful
- Questions to consider:
  - What knowledge is required for school development?
  - How to manage knowledge for effective school development?

LECTURE 45

Topic 190: Framework for a KM Platform in Higher Education Institutions

- A proposed framework for a knowledge management system in higher education institutions
- Includes eight sub-portals:
  - K2Doc: a repository of documents and information for employees
  - K2Learn: a database of documents and resources for faculty and students
  - K2Research: a repository of research and expertise developed in-house
  - K2DataBank: a collection of student projects and experiences
  - K2Expert: a directory of experts and their areas of expertise

- K2Explore: a archive of questions and answers for future reference
- K2Konnect: online discussion forums for students, staff, and management
- K2TestTime: a virtual exam center for students to practice and improve

Topic 191: KM Framework for Curriculum Development

- A framework to improve curriculum development processes in technical education
- Includes five phases:
  - F1: understanding learner needs and feedback
  - F2: analyzing curriculums from different universities
  - F3: collecting information from various disciplines
  - F4: organizing content for interdisciplinary curriculum design
  - F5: guiding new faculty members in curriculum development
- Benefits:
  - Curriculum development based on learner needs
  - Reduced effort and time in curriculum development
  - Improved employability of students

Topic 192: Expected Knowledge Activities in KM Framework for Curriculum Development

- Four ways of knowledge creation:
  - Knowledge internalization: learning from experience
  - Knowledge exchange: sharing experiences
  - Knowledge capture: documenting knowledge
  - Knowledge reuse: applying existing knowledge

- Expected knowledge activities in each asset:
    - Asset F1: analyzing feedback and identifying gaps
    - Asset F2: evaluating curriculums and sharing best practices
    - Asset F3: identifying new equipment and research
    - Asset F4: developing interdisciplinary curriculum
    - Asset F5: guiding new faculty members
    - Asset F6: analyzing industry needs and capturing training reports

Topic 193: Knowledge Management for Academic Libraries

- Traditional roles of librarians:
    - Managing library collections
    - Providing information services
    - Supporting research
    - Managing records
- Roles of librarians in knowledge economy:
    - Fostering knowledge-sharing culture
    - Managing information and records
    - Educating and training users
    - Managing information systems and technology
    - Providing information services
    - Managing intellectual capital
- Role of librarians in KM:
    - Managing organizational knowledge
    - Collaborating with other units
    - Creating a learning organization
- KM objectives in libraries:

- Promoting innovation
- Strengthening knowledge sharing
- Improving knowledge flow

Topic 194: Reasons for Libraries to Adopt KM

- Improving library services and operations
- Enhancing decision-making capabilities
- Reducing duplication of effort
- Enhancing collaboration and innovation
- Capturing and retaining employee knowledge
- Increasing awareness of knowledge gaps
- Improving user services and experience
