MGTE630

Glossary

- **Abductive Reasoning**

A special case of inductive reasoning resulting in specific assertions that imply the available information in context of the background knowledge without logical certainty.

- **Adaptive learning**

It is a method of gaining new skills by observing outcomes and changing practice and also known as single loop learning.

- **Benchmarking**

The practice of comparing the performance of your organization, department or function against the performance of 'the best' - whether they be other organizations, industry standards or internal departments. The aim is to look at how well you are doing compared to others in the same field or industry, and to learn from their best practices as a basis for improving your own.

- **Blog**

Blog is an online resource which can be openly accessed or password protected, allowing people with similar interests to share and discuss ideas.

- **Collaboration**

A generic term that simply means teamwork or a group effort. It also has a more specific meaning in knowledge management, where it is often used to describe close working relationships involving the sharing of knowledge.

Maha Malik

❖ **Data mining**

It is a technique to analyze data in very large databases. Analysis can reveal trends and patterns and can be used to improve vital business processes.
