B. Agent management

C. Case assignment

D. Activity management

Q.2 _____ is the average amount of time a customer is held in a queue awaiting agent response.

A. Abandon rate

B. Average handle time (AHT)

C. Volumes received

D. Average queuing time

Q.3 _____ automate business processes, so that process owners know what to do, the order in which actions should be performed, and who is responsible for each action.

A. Product application

B. Territory application

C. Workflow application

D. Product application

Q.4 _____ is an attractive option for companies because it transfers the responsibility and cost for service to the customer.

A. Knowledge-based self-service

B. Service analytics

C. Customer self-service

D. Service level management

Q.5 _____ do not fit a pre-defined data model.

A. Alphanumeric codes

B. Unstructured data

C. Structured data

D. Raw data

Q.6 _____ database model allows children to have one parent, more than one parent, or no parent.

A. Relational model

B. Network model

C. Hierarchical model

D. Big data model

Q.7 _____ applications enable customer interactions through a wide range of communication media, including email, SMS, websites, social media, print and customer self-service.

A. Inbound communications management

B. Case management

C. Outbound communications management

D. Customer communications management

Q.8 In _____ the only way to get access to the lower levels is to start at the top and work downwards.

A. Network model

B. Big data model

C. Hierarchical model

D. Relational model

Q.9 _____is the total number of inbound contacts across all channels.

A. Abandon rate

B. Volumes received

C. Average handle time (AHT)

D. Average queuing time

Q.10 _____ applications usually integrate with Outlook and other calendaring and communications applications.

A. Case management

B. Service level management

C. Customer communications management

D. Activity management

Q.1 _____ applications ensure that each enquiry or issue gets routed to the right agent or technician for resolution.

A. Service level management

B. Agent management

C. Case assignment

D. Activity management

Q.2 _____ is the average amount of time a customer is held in a queue awaiting agent response.

A. Abandon rate

B. Average handle time (AHT)

C. Volumes received

D. Average queuing time

Q.3 _____ automate business processes, so that process owners know what to do, the order in which actions should be performed, and who is responsible for each action.

A. Product application

B. Territory application

C. Workflow application

D. Product application

Q.4 _____ is an attractive option for companies because it transfers the responsibility and cost for service to the customer.

A. Knowledge-based self-service

B. Service analytics

C. Customer self-service

D. Service level management

Q.5 _____ do not fit a pre-defined data model.

A. Alphanumeric codes

B. Unstructured data

C. Structured data

D. Raw data

Q.6 _____ database model allows children to have one parent, more than one parent, or no parent.

A. Relational model

B. Network model

C. Hierarchical model

D. Big data model

Q.7 _____ applications enable customer interactions through a wide range of communication media, including email, SMS, websites, social media, print and customer self-service.

A. Inbound communications management

B. Case management

C. Outbound communications management

D. Customer communications management

Q.8 In _____ the only way to get access to the lower levels is to start at the top and work downwards.

A. Network model

B. Big data model

C. Hierarchical model

D. Relational model

Q.9 _____is the total number of inbound contacts across all channels.

A. Abandon rate

B. Volumes received

C. Average handle time (AHT)

D. Average queuing time

Q.10 _____ applications usually integrate with Outlook and other calendaring and communications applications.

A. Case management

B. Service level management

C. Customer communications management

D. Activity management

Q.1 _____ is also known as incident management and issue management.

A. Agent management

B. Case assignment

C. Case management

D. Activity management

Q.2 _____ is an attractive option for companies because it transfers the responsibility and cost for service to the customer.

A. Customer self-service

B. Knowledge-based self-service

C. Service analytics

D. Service level management

Q.3 Data in _____ apps need to be synchronized with the CRM database either in real-time or periodically, and attached to an account, contact or opportunity so that other customer contact staff have a complete view of customer interactions, and billable hours are recorded.

A. Customer communications management

B. Service level management

C. Case management

D. Activity management

Q.4 _____ take the form of textual or non-textual files.

A. Raw data

B. Alphanumeric codes

D. Service level management

Q.2 _____ automate business processes, so that process owners know what to do, the order in which actions should be performed, and who is responsible for each action.

A. Territory application

B. Workflow application

C. Product application

D. Product application

Q.3 _____ applications usually integrate with Outlook and other calendaring and communications applications.

A. Service level management

B. Case management

C. Customer communications management

D. Activity management

Q.4 _____ database model allows children to have one parent, more than one parent, or no parent.

A. Network model

B. Hierarchical model

C. Relational model

D. Big data model

Q.5 _____is the total number of inbound contacts across all channels.

A. Average handle time (AHT)

B. Abandon rate

C. Volumes received

D. Average queuing time

Q.6 _____ is provided by a pre-defined data model that specifies the data to be stored in each field.

A. Raw data

B. Unstructured data

C. Alphanumeric codes

D. Structured data

Q.7 _____ systems allow customers to manage their bills and other information online, thereby reducing account management costs for the seller.

A. Pipeline management

B. Territory management

C. Order management

D. Lead management

Q.8 In _____, you may end up working through several layers of higher-level data before getting to the data you need.

A. Big data model

B. Relational model

C. Hierarchical model

D. Network model

Q.9 _____ take the form of textual or non-textual files.

A. Alphanumeric codes

B. Unstructured data

C. Structured data

D. Raw data
