Subject: CS620

Quiz Completed: 5/7/2026, 12:41:46 PM

Total Questions: 20

Question 1:

Closed-form models are not able to analyze most of the _____ that are encountered in practice.

A. Complex systems

B. Simple system

C. Complicated system

D. Natural system

Selected Answer: A

Question 2:

1WSC is sponsored by _____ technical societies and the National Institute of Standards and Technology

A. Six

B. Seven

C. Eight

D. Ten

Selected Answer: C

Question 3:

If there is not enough time or if the personnel are not available, _____ is not appropriate.

A. Simulation

B. Estimation

C. Calculation

D. Analysis

Selected Answer: A

Question 4:

Time can be compressed or expanded to allow for a _____ of the phenomena under _____

- A. Slow-down, Analysis
- B. Speed-up or slow-down, Investigation
- C. Speed-up, Observation

D. Both a & b

Selected Answer: D

Question 5:

The definition of the model _____ provides a static description of the model

- A. Parameters
- B. Entities
- C. Variables

D. Components

Selected Answer: D

Question 6:

In the three-phase approach, events are considered to be activities of duration _____ units

- A. Few seconds

B. Zero-time

- C. Milliseconds
- D. No-time

Selected Answer: B

Question 7:

The mechanism for advancing simulation time and guaranteeing that all events occur in correct chronological order is based on the _____

- A. Present event list(PEL)

B. Future event list (FEL)

- C. Past event list(PEL)
- D. Future Indefinite event list(FIEL)

Selected Answer: B

Question 8:

While talking about Concepts In Discrete-event Simulation, a _____ typically represents a service time, an interarrival time, or any other processing time whose duration has been characterized and defined by the modeler.

- A. Duration of an Activity
- B. Clock
- C. Activity**
- D. Delay

Selected Answer: C

Question 9:

While talking about Concepts In Discrete-event Simulation, A duration of time of unspecified indefinite length, which is not known until it ends (e.g., a customer's delay in a last-in-first-out waiting line which, when it begins, depends on future arrivals).

- A. Activity
- B. Clock
- C. Event list
- D. Delay**

Selected Answer: D

Question 10:

The _____ gained during the designing of a ----- _____ could be of great value toward suggesting improvement in the system under investigation:

- A. Screening, Estimation
- B. Observation, Calculations
- C. Knowledge, Simulation Model**
- D. Analysis, Statistics

Selected Answer: C

Question 11:

_____ questions can be answered. This is particularly useful in the design of new systems

- A. a- "Where When"
- B. "Why if"
- C. "Else if"
- D. "What if"**

Selected Answer: D

Question 12:

Simulation can be performed faster today than yesterday and will be even faster tomorrow, because of advances in _____

- A. Methods
- B. Hardware
- C. Software
- D. Technology**

Selected Answer: D

Question 13:

Many simulation software vendors have developed _____ capabilities within their packages for performing very thorough analysis.

- A. Inference based analysis
- B. Input-analysis
- C. Output-analysis**
- D. None

Selected Answer: C

Question 14:

An activity's duration may be specified in several ways

- A. Statistical
- B. A function depending on system variables and/or entity attributes
- C. Deterministic
- D. All of above**

Selected Answer: D

Question 15:

While talking about Concepts In Discrete-event Simulation and keeping track of activities, delays are managed by placing the associated entity on another list, perhaps representing a waiting line, until when the system conditions permit the processing of the entity.

A. False

B. True

C. Option C not found

D. Option D not found

Selected Answer: B

Question 16:

In _____, it is necessary to decide on the boundary between the system and its environment.

A. Modeling systems

B. Dynamic system

C. Static system

D. Random system

Selected Answer: A

Question 17:

While talking about the Concepts In Discrete-event Simulation, any object or component in the system that requires explicit representation in the model (e.g., a server, a customer, a machine).

A. Event

B. Attribute

C. Model

D. Entity

Selected Answer: D

Question 18:

While talking about the Concepts In Discrete-event Simulation, The properties of a given entity (e.g., the priority of a waiting customer, the routing of a job through a job shop).

A. List

B. Entity

C. Attributes

D. Model

Selected Answer: C

Question 19:

The state of a system is defined to be that _____ necessary to describe the system at any time, relative to the objectives of the study

A. Collection of allies

B. Collection of variables

C. Collection of parameters

D. Collection of characteristics

Selected Answer: B

Question 20:

An _____ is defined as an instantaneous occurrence that might change the state of the system

A. Occasion

B. Event

C. Moment

D. State

Selected Answer: B
