MTH304 Grand Quiz Solution 2021

Students in this post will see **MTH304 Grand Quiz Solution 2021.** You can read or learn from our post because don't have any download link due to google policy and if you want to get **MTH304 Grand Quiz Solution 2021 pdf file** then you can contact us on the contact option then we will send you a pdf file of any books. We hope this post would be helpful in your exams because this is the most important **MTH304 Grand Quiz** you will get good marks in your exams if you read this and learn but maybe this could not come in your exams but you can get hint and preparation method to check which thing is important. Please share this **MTH304 Grand Quiz Solution 2021** with other virtual university students. Also, read this **ENG201 Solved Grand Quiz** (https://studysolutionhub.blogspot.com/2021/07/eng201-solved-grand-quiz-2021.html).

MTH304 Grand Quiz Solution 2021 with Answers

If a force 6 N acts on the 60 degrees with the horizontal, then the horizontal component of the force is......N

3

The greatest resultant of two forces p and q is possible when the angle between two forces is.....degrees

.

0

Lamy theorem is applied if the body is in a state of horizontal equilibrium only under the action of three concurrent coplanar forces.

True

The branch of mechanics which deals with bodies at rest is called........

Statics

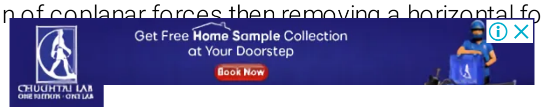
If the body does not change its position with respect to surrounding then it is said to be in a state of.....

Rest

If the mass of a particle is 8kg, then its weight will be.....N

80

If a particle is in equilibrium under the action of coplanar forces then removing a horizontal force makes the particle in......



Vertical equilibrium only

Let X be the um of Horizontal forces and Y be the sum of Vertical forces acting on particles. If X is-ve and Y is +ve, then the resultant of the force act in the....

Second Quadrant

If the resultant force acting on the particles is (3i+4j)N, then what additional singal single must be applied to make the particle in Equilibrium.

(-3i-4j)N

Let X be the some of the Horizontal forces and Y be the sum of Vertical Forces acting on a particle then magnitude of Resultant force acting on the particle, if Y=0 s given by.......

R=X

If a body is hanging in equilibrium by the light in-extensible string, then the helving the weight of the body makes tension in the string.....

Halved

Lamy Theorem cannot apply if the angle between any two forces are....

.

180 Degrees

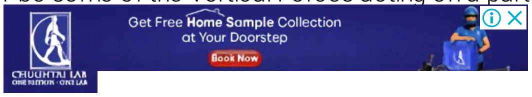
According to the Lamy Theorem

If the three forces actin t on a point are in equilibrium, each force is proportional to the sine of the angle to the sine of the singal between the other two

If a particle is in equilibrium under the action of the coplanar forces, then the sum of horizontal forces is.....

0

Let X be the Sum of Horizontal forces and Y be some of the Vertical Forces acting on a particle, If X=0N and Y = -5N then the angle made by the horizontal with +ve x-axis is.....



90 degrees

If the body is moving at (2i+3j) m/s, then (2i+3j) m/s is the.....of the body.

Velocity

Let X be Sum of Horizontal forces and Y the sum of The Vertical forces acting on a particle. If X= 3N and Y= -rN, the resultant of the forces act in the.....

Third Quadrant

A particle is moving in a two-dimensional plane with the speed 5m/s. Which of the following is NOT the possible velocity of the particle?

3i+4j

Law of cosines is applicable on.....

Any triangle

If a body is hanging in equilibrium but the light is inextensible string with the tension 20N, then the mass of the body is.....

2kg

If the resultant force acts along they = x, then the resultant makes an angle of..... degrees with +ve x-axis.

45

Law of Since is applicable on......

Acute-angled triangle only

Let X be the Sum of Horizontal forces and Y be the sum of Vertical forces acting on a particle. If X=4N and Y=0N then the angle made by the Resultant with +ve x-axis is.....

0 degrees
