Question No:1

(Marks:1)

Vu-Topper RM

Which of the following problems is NOT solved using dynamic programming?

- A. Matrix chain multiplication problem
- B. Edit distance problem
- C. Fractional knapsack problem**
- D. 0/1 knapsack problem

Question No:2

(Marks:1)

Vu-Topper RM

Breadth-first search is a traversal strategy for _____.

- A. Tree
- B. Link List
- C. Array
- D. Graph**

Question No:3

(Marks:1)

Vu-Topper RM

In a digraph, the number of edges coming in of a vertex is called the _____ of that vertex.

- A. Node
- B. In-degree**
- C. Out-degree
- D. Complete degree

Question No:4

(Marks:1)

Vu-Topper RM

In an undirected graph, we say that an edge is _____ on a vertex if the vertex is an endpoint of the edge.

- A. Tree
- B. Directed
- C. Undirected
- D. Incident**

Question No:5

(Marks:1)

Vu-Topper RM

Which graph traversal algorithm uses a stack to keep track of vertices?

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

A. Depth First Search

- B. Greedy Algorithm
- C. Divide and Conquer
- D. Breadth First Search

Question No:6

(Marks:1)

Vu-Topper RM

In general, a graph $G = (V, E)$ consists of a _____ and E , a binary relation on V called edges.

A. Finite set of vertices V

- B. Infinite set of objects
- C. Infinite set of nodes
- D. Infinite set of vertices V

Question No:7

(Marks:1)

Vu-Topper RM

Each time we traverse graph by Breadth-first search algorithm, we count the distance from _____

- A. left most node
- B. neighbors of the starting node
- C. starting node**
- D. right most node

Question No:8

(Marks:1)

Vu-Topper RM

For traversing the graphs, _____ can be visualized as a wave front propagating inward towards root node.

- A. Binary search
- B. Linear search
- C. Breadth-first search**
- D. Depth-first Search

Question No:9

(Marks:1)

Vu-Topper RM

In a digraph, the number of edges coming out of a vertex is called the _____ of that vertex.

- A. Node

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

- B. In-degree
- C. Out-degree**
- D. Complete degree

Question No:10 (Marks:1) **Vu-Topper RM**
Brute-force is a simple strategy for computing _____.

- A. shortest path**
- B. Longest path
- C. Complete path
- D. Easiest path

Question No:11 (Marks:1) **Vu-Topper RM**
In general in comparison with Fractional Knapsack problem,

- a. knapsack problem is very easy to solve
- b. knapsack problem is hard to solve**
- c. We cannot compare them
- d. Both are easy to solve

Question No:12 (Marks:1) **Vu-Topper RM**
_____ is a good way to model some sort of “connection” or “relationship” or “interaction” between pairs of objects taken from a set of objects.

- A. Vertices
- B. Tree
- C. Graph**
- D. Node

Question No:13 (Marks:1) **Vu-Topper RM**
For a digraph $G = (V, E)$, Sum of in-degree(v) _____

- A. $<$ Sum of out-degree(v)
- B. = Sum of out-degree(v)**
- C. Sum of out-degree(v)

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

For More Help Contact What's app 03224021365

D. Not equal to Sum of out-degree(v)

Question No:14

(Marks:1)

Vu-Topper RM

Graphs are important _____ model for many application problems.

- A. Unpredictable
- B. Mathematical**
- C. Unsystematic
- D. Haphazard

Question No:15

(Marks:1)

Vu-Topper RM

Which of the following algorithms solves the fractional knapsack problem most effectively?

- A. Backtracking
- B. Greedy algorithm**
- C. Divide and conquer
- D. Dynamic programming

Question No:16

(Marks:1)

Vu-Topper RM

A _____ cycle is a cycle that visits every edge of the graph exactly once.

- A. Undirected
- B. Loop
- C. Eulerian**
- D. Directed

Question No:17

(Marks:1)

Vu-Topper RM

In Fractional Knapsack problem, one is allowed to take fraction of an item for _____

- A. None of the given options
- B. for fraction of the value
- C. Both, fraction of the weight and value
- D. for fraction of the weight**

بری صحبت سے تنہائی بہتر ہے اور تنہائی سے نیک صحبت بہتر ہے

For More Help Contact What's app 03224021365

Question No:18

(Marks:1)

Vu-Topper RM

In Fractional Knapsack problem, the goal is to _____

- A. minimize the value of items without exceeding the total weight limit of W
- B. maximize the value of items without exceeding the total weight limit of W**
- C. maximize the value of items even if exceeding the total weight limit of W
- D. minimize the value of items even if exceeding the total weight limit of W

Question No:19

(Marks:1)

Vu-Topper RM

Traversing a graph means visiting _____ in the graph.

- A. every node**
- B. more than one node
- C. no node
- D. at least o

Question No:20

(Marks:1)

Vu-Topper RM

There are _____ ways of representing graphs.

- A. 1
- B. 3
- C. 2
- D. 4**

Question No:21

(Marks:1)

Vu-Topper RM

Which of the following is true about graph?

- A. A graph may contain no vertices and many edges
- B. A graph may contain many edges and no vertices
- C. A graph may contain no edges and many vertices**
- D. A graph may contain no edges and no vertices

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

Question No:22

(Marks:1)

Vu-Topper RM

Each vertex can reach every other vertex is called _____.

- A. Unconnected graph
- B. Unordered graph
- C. Ordered graph
- D. Connected graph**

Question No:23

(Marks:1)

Vu-Topper RM

In chain matrix multiplication, the order of the matrices _____.

- A. is equal
- B. is reverse**
- C. can not be changed
- D. can be changed

Question No:24

(Marks:1)

Vu-Topper RM

In Knapsack Problem, each item must be entirely accepted or rejected, is called _____ problem.

- A. Linear
- B. Fractional
- C. 0-1**
- D. Optimal

Question No:25

(Marks:1)

Vu-Topper RM

In Dynamic Programming based solution of Knapsack Problem, if we decide to take an object 'i', then we gain _____.

- A. W(Total Weight of Knapsack)
- B. V (Total Value of all items)
- C. v_i (Value of object i)**
- D. None of the given option

Page 93

Question No:26

(Marks:1)

Vu-Topper RM

In chain matrix multiplication, table is filled _____ to find the multiplication of matrix.

بري صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

For More Help Contact What's app 03224021365

- A. row wise
- B. column wise
- C. diagonally

D. bottom-to-up **Page 86**

Question No:27 **(Marks:1)** **Vu-Topper RM**

In chain matrix multiplication, if there are n items, there are _____ ways in which outer most pair of parentheses can placed.

- A. n^2
- B. $2n$
- C. $n+1$

D. $n-1$ **Page 85**

Question No:28 **(Marks:1)** **Vu-Topper RM**

Catalan numbers are related the number of different _____ on ' n ' nodes.

- A. Arrays
- B. linked lists

C. binary trees **Page 85**
D. functions

Question No:29 **(Marks:1)** **Vu-Topper RM**

What is the value of k in the given equation?

$$m[1, 5] = m[1, 3] + m[4, 5] + p_0 \cdot p_3 \cdot p_5$$

- A. 3**
- B. 1
- C. 4
- D. 5

Question No:30 **(Marks:1)** **Vu-Topper RM**

The running time of brute-force algorithm to solve Knapsack problem is _____.

- A. $O(n!)$
- B. $O(2^n)$**

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

- C. $O(n)$
- D. $O(n^3)$

Question No:31

(Marks:1)

Vu-Topper RM

What is the value of k in the given equation?

$$m[2, 5] = m[2, 3] + m[4, 5] + p_1 \cdot p_3 \cdot p_5$$

- A. 3
- B. 5
- C. 2**
- D. 4

Question No:32

(Marks:1)

Vu-Topper RM

We can't utilize a divide-and-conquer strategy for Chain Matrix Multiplication because _____.

- A. Size of data is not given
- B. We can easily perform it in linear time
- C. We use divide and conquer for sorting only
- D. We do not know the optimum k**

Question No:33

(Marks:1)

Vu-Topper RM

Suppose we have 5 matrices A, B, C, D and E. What is the correct expansion of $m[3,4]$ in chain matrix multiplication?

- A. $m[3, 4] = m[3, 4] + m[4, 4] + p_2 \cdot p_3 \cdot p_4$
- B. $m[3, 4] = m[3, 3] + m[3, 4] + p_2 \cdot p_3 \cdot p_4$
- C. $m[3, 4] = m[3, 3] + m[4, 4] + p_0 \cdot p_3 \cdot p_4$
- D. $m[3, 4] = m[3, 3] + m[4, 4] + p_2 \cdot p_3 \cdot p_4$**

Question No:34

(Marks:1)

Vu-Topper RM

Time complexity of activity selection algorithm is _____.

- A. $O(\log N^2)$
- B. $O(N \log N)$**
- C. $O(\log N)$
- D. $O(N)$

بري صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

Question No:35

(Marks:1)

Vu-Topper RM

If we have 6 metrics in chain matrix multiplication problem then the number of table entries must be?

A. 12

B. 25

C. 30

D. 36 **Google**

Question No:36

(Marks:1)

Vu-Topper RM

Counting Money problem:

A. Can be solved by simple recursive algorithm

B. Can be optimally solved by greedy algorithm

C. can not be optimally solved by greedy algorithm

D. Can not be solved by brute force algorithm

Question No:37

(Marks:1)

Vu-Topper RM

Time complexity of Dynamic Programming based algorithm for computing the minimum cost of Chain Matrix Multiplication is

_____.

A. Log n

B. n

C. n^2 (n square)

D. n^3 (ncube) **Page 90**

Question No:38

(Marks:1)

Vu-Topper RM

_____ items are not allowed in the 0/1 knapsack.

A. Lighter

B. Whole

C. Weighty

D. Fractional

Question No:39

(Marks:1)

Vu-Topper RM

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

If matrix A of dimension $p \times q$ is multiplied with matrix B of dimension $q \times r$, then each entry in resultant matrix takes _____ time.

A. O (q)

Page 84

B. (1)

C. ($p \times q$)

D. ($q \times r$)

Question No:40

(Marks:1)

Vu-Topper RM

In Activity scheduling algorithm, the width of a rectangle _____

A. Directs towards recursion

B. Indicates the duration of an activity

C. Is always ignored

D. Should be maximized

Question No:41

(Marks:1)

Vu-Topper RM

What will be value of the matrices product $(A A)A$? if $A = 5 \times 6$ $A = 6 \times 7$
 $A = 7 \times 2$.

A. 290

B. 280

C. 250

D. 270

Question No:42

(Marks:1)

Vu-Topper RM

Which of the following algorithms is the best approach for solving Huffman codes?

A. Divide/conquer algorithm

B. Brute force algorithm

C. Greedy algorithm

D. Exhaustive search

Question No:43

(Marks:1)

Vu-Topper RM

Using base condition we set all $m[i,i] =$ _____ ?

A. 1

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

B. 0

Page 86

C. ∞

D. -1

Question No:44

(Marks:1)

Vu-Topper RM

What will be value of the matrices product $(A A)A$? if $A = 5 \times 3$ $A = 3 \times 7$
 $A = 7 \times 2$.

A. 180

B. 175

C. 88

D. 80

Question No:45

(Marks:1)

Vu-Topper RM

In Huffman encoding fixed-length codes are popular because it is very easy to break up a _____ into its individual _____.

A. Number, String

B. Floating number, String

C. Character, Number

D. String, Characters

Question No:46

(Marks:1)

Vu-Topper RM

The _____ is a problem for which the greedy algorithm approach provides an optimal solution.

A. Knapsack Problem

B. NP complete problem

C. Dynamic programming

D. Activity selection

Question No:47

(Marks:1)

Vu-Topper RM

Consider the string "abcdaacac". if the string is coded with ASCII codes, the message length would be _____.

A. 72 bits

B. 60 bits

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

- C. 90 bits
- D. 70 bits

Question No:48

(Marks:1)

Vu-Topper RM

The formula for calculating the Catalan number is _____.

☐	$C(n) = \frac{1}{n+1} \binom{n}{2n}$	
☐	$C(n) = \frac{1}{n-1} \binom{n}{2n}$	
☒	$C(n) = \frac{1}{n+1} \binom{2n}{n}$	Page 85
☐	$C(n) = \frac{1}{n-1} \binom{2n}{n}$	

Question No:49

(Marks:1)

Vu-Topper RM

Dynamic programming formulation of the matrix chain multiplication problem will store the solutions of each sub problem in a(n):

- A. Class
- B. Array
- C. Table**
- D. Variable

Question No:50

(Marks:1)

Vu-Topper RM

Consider two matrices A and B, where A is 10*30 and B is 30*40. What is correct number of multiplications require to multiply A and B?

- A. 30*40
- B. 10*30
- C. 30*30
- D. 10*30*40**

بری صحبت سے تنہائی بہتر ہے اور تنہائی سے نیک صحبت بہتر ہے

Question No:51

(Marks:1)

Vu-Topper RM

Which of the following is true about Huffman Coding?

- A. In Huffman coding, no code is prefix of any other code**
- B. Huffman Codes may not be optimal lossless codes in some cases
- C. Huffman coding is not an efficient coding way
- D. Huffman coding may become lossy in some cases

Question No:52

(Marks:1)

Vu-Topper RM

The optimal solution to a problem is a combination of optimal solutions to its subproblems. This is known as _____.

- A. Principle of feasibility
- B. Principle of locality
- C. Principle of computation
- D. Principle of optimality**

Question No:53

(Marks:1)

Vu-Topper RM

You are given a knapsack that can carry a maximum weight of 60. There are 4 items with weights {20, 30, 40, 70} and values {90, 80, 100, 250}. What is the maximum value of the items you can carry using the knapsack?

- A. 270**
- B. 190
- C. 520
- D. 170

Question No:54

(Marks:1)

Vu-Topper RM

In Huffman Encoding, the characters with smallest probabilities are placed at the _____ depth of the tree.

- A. Root
- B. Minimum**
- C. Maximum
- D. Average

بري صحبت سے تہائی بہتر ہے اور تہائی سے نيك صحبت بہتر ہے

Question No:55

(Marks:1)

Vu-Topper RM

Which one of the following problems can be solved using dynamic problem?

- A. Bubble sort problem
- B. Greedy search problem
- C. Fractional knapsack problem
- D. Matrix chain multiplication problem**

Page 85

Question No:56

(Marks:1)

Vu-Topper RM

Huffman algorithm uses a _____ to generate a prefix code T that minimizes the expected length $B(T)$ of the encoded string.

- A. Heuristic Approach
- B. Null Approach
- C. Greedy Approach**
- D. Dynamic Programming

Question No:57

(Marks:1)

Vu-Topper RM

If a matrix has three rows and two columns, then dimensions of matrix will be:

- A. 3×2**
- B. 2×3
- C. 3×3
- D. 2×2

Question No:58

(Marks:1)

Vu-Topper RM

In general, the activity selection problem is to select a _____.

- A. maximum-size set of mutually non-interfering activities**
- B. minimum-size set of mutually non-interfering activities
- C. maximum-size set of interfering activities
- D. minimum-size set of interfering activities

Question No:59

(Marks:1)

Vu-Topper RM

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

We can multiply two matrices A and B only when they are compatible which means:

- A. Number of rows and columns do not matter
- B. Number of rows in A must be equal to number of rows in B
- C. Number of columns in A must be equal to number of rows in B**
- Page 84**
- D. Number of columns in A must be equal to number of columns in B

Question No:60 (Marks:1) **Vu-Topper RM**

In context of activity selection algorithm, time is dominated by sorting of the activities by _____.

- A. Finish Times**
- B. Start Times
- C. Average Times
- D. CPU Burst Times

Question No:61 (Marks:1) **Vu-Topper RM**

Algorithm allows negative weights edges and no negative cost cycles.

- A. Brute-force technique
- B. Bellman-Ford** **Page 159**
- C. Dijkstra's
- D. Print

Question No:62 (Marks:1) **Vu-Topper RM**

In Prim's algorithm, we start with the _____ vertex r; it can be any vertex.

- A. Root** **Page 149**
- B. Pivot
- C. Leaf
- D. Negative

Question No:63 (Marks:1) **Vu-Topper RM**

Overall Running time of Prim's algorithm is _____.

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

- A. $\Theta(E \log E)$
- B. $\Theta(E \log V)$
- C. $\Theta((V+E) \log V)$**
- D. $\Theta((V+E) \log E)$

Page 152

Question No:64

(Marks:1)

Vu-Topper RM

Problems such as the shortest route between cities can be solved efficiently by modeling the road map as a _____.

- A. Tree
- B. Stack
- C. Graph**
- D. Linked list

Google

Question No:65

(Marks:1)

Vu-Topper RM

In Kruskal's algorithm, the next edge is added to viable set A, if its adding does not induce a/an _____.

- A. Tree
- B. Edge
- C. Cycle**
- D. Vertex

Page 147

Question No:66

(Marks:1)

Vu-Topper RM

Bellman-Ford algorithm is used to solve _____ problems.

- A. Flow of networking
- B. All pair shortest path
- C. Single source shortest path**
- D. Double source shortest path

Google

Question No:67

(Marks:1)

Vu-Topper RM

In Prim's algorithm, If the color of a vertex is _____, then it is in S otherwise not.

- A. Blue
- B. Gray

بري صحبت سے تہائی بہتر ہے اور تہائی سے نيك صحبت بہتر ہے

Question No:68**(Marks:1)****Vu-Topper RM**

Keeping in mind the shortest-path, if given scenarios occur in computer networks like the internet where data packets have to be routed. The vertices are _____ and Edges are _____ which may be wired or wireless.

- A. Internet, routers
- B. Routers, internet
- C. Communication links, routers

D. Routers, communication links**Page 153****Question No:69****(Marks:1)****Vu-Topper RM**

Dijkstra's algorithm :

- A. Has greedy approach to find all shortest paths
- B. Has both greedy and Dynamic approach to find all shortest paths
- C. Has greedy approach to compute single source shortest paths to all other vertices**
- D. Has both greedy and dynamic approach to compute single source shortest paths to all other vertices.

Page 154**Question No:70****(Marks:1)****Vu-Topper RM**

In Dijkstra's algorithm, initially the estimated value from source vertex to any vertex v is:

- A. One (1)
- B. Zero (0)
- C. Infinity (∞)**
- D. Minus one (-1)

Page 154**Question No:71****(Marks:1)****Vu-Topper RM**

From the given option's which one is correct regarding the time complexity of Dijkstra's algorithm:

بري صحبت سے تتهائي بهتر هے اور تتهائي سے نيك صحبت بهتر هے

C. $O(N^3)$

D. $O(\log N)$

Question No:72

(Marks:1)

Vu-Topper RM

In Bellman-Ford Algorithm, relaxation applies to _____ of the graph.

A. Every edge

Page 159

B. Every Vertices

C. Only First edge

D. Only First Vertices

Question No:73

(Marks:1)

Vu-Topper RM

The key[u] is the weight of the _____ going from u to any vertex in S.

A. Edge

B. lighter edge

C. lightest edge

Page 151

D. heavier edge

Question No:74

(Marks:1)

Vu-Topper RM

In Bellman-Ford Algorithm, path consists of at most _____ edges.

A. $V-1$

Page 160

B. $E+1$

C. $V+1$

D. $E-1$

Question No:75

(Marks:1)

Vu-Topper RM

Overall time for Kruskal algorithm is:

A. $\Theta(\log E)$

B. $\Theta(V \log E)$

C. $\Theta(E \log V)$

Page 149

بري صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

D. $\Theta(\text{ElogE})$

Question No:76

(Marks:1)

Vu-Topper RM

A graph may contain -----.

A. No MST

B. One or zero MST

C. Exactly one MST

D. More than one MST

Google

Question No:77

(Marks:1)

Vu-Topper RM

In which algorithm, information of shortest path is propagated sequentially along each shortest path in the graph.

A. Prim's

B. Dijkstra's

C. Bellman-Ford

Page 16

D. Brute-force technique

Question No:78

(Marks:1)

Vu-Topper RM

Edge weights can be interpreted as distance _____.

A. in breadth-First Search

B. in Queue's

C. in the shortest-paths

Page 153

D. in depth-First Search

Question No:79

(Marks:1)

Vu-Topper RM

In the shortest-paths problem, we are given a weighted of _____ $G = (V, E)$.

A. Line graph

B. Directed graph

Page 153

C. Weighted graph

D. Un-directed graph

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Question No:80

(Marks:1)

Vu-Topper RM

Kruskal's algorithm (choose best non-cycle edge) is better than Prim's (choose best tree edge) when the _____ has relatively few

_____.

A. tree, edges

B. graph, edges

Google

C. tree, branches

D. graph, branches

Question No:81

(Marks:1)

Vu-Topper RM

From given algorithms which one considered as best for finding the shortest-path:

A. BFS

B. DFS

C. Dijkstra's algorithm

Page 154

D. Bellman-Ford algorithm

Question No:82

(Marks:1)

Vu-Topper RM

Finding the faster result of the shortest path from u to v for every pair of vertices u and v we use _____.

A. both I and II

B. All-pairs shortest-paths problem

Page 153

C. Two-pairs shortest-paths problem

D. Single-pairs shortest-paths problem

Question No:83

(Marks:1)

Vu-Topper RM

The running time of Bellman-Ford Algorithm is _____.

A. $\Theta(V^2)$

Page 159

B. $\Theta(E + E)$

C. $\Theta(V + E)$

D. $\Theta(V + V)$

Question No:84

(Marks:1)

Vu-Topper RM

Dijkstra's algorithm is a simple _____ algorithm for computing the single-source shortest-paths to all other vertices.

A. Greedy

Page 154

B. Brute-Force

C. Bellman-Ford

D. Divide and conquer

Question No:85

(Marks:1)

Vu-Topper RM

In Prim's algorithm, we will make use of _____.

A. List

B. Array

C. Stack

D. Priority Queue

Page 150

Question No:86

(Marks:1)

Vu-Topper RM

What is the time complexity to extract a vertex from the priority queue in Prim's algorithm?

A. $(\log E)$

B. (V)

C. $(V+E)$

D. $O(\log V)$

Page 152

Question No:87

(Marks:1)

Vu-Topper RM

Bellman-Ford Algorithm does not allow $G(\text{graph})$ to have _____.

A. positive cost cycles

B. negative cost cycles

Page 159

C. positive weights edges

D. negative weights edges

Question No:88

(Marks:1)

Vu-Topper RM

Which of the following statement is false about Dijkstra's Algorithm?

A. It works on a weighted directed graph

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

B. It is used to solve Single-source shortest path

C. It can be applied on graphs having a negative weight function

D. Its implementation in data structure is possible through the priority queue

Question No:89

(Marks:1)

Vu-Topper RM

In _____ algorithm(s), at any time, the subset of edges A forms a single tree.

A. BFS

B. Prim's

Page 149

C. Kruskal's

D. kruskal's and Prim's

Question No:90

(Marks:1)

Vu-Topper RM

Floyd-Warshall Algorithm is based on _____.

A. Complexity theory

B. Greedy Approach

C. Divide and Conquer

D. Dynamic Programming

Page 161

Question No:91

(Marks:1)

Vu-Topper RM

Dijkstra's Algorithm cannot be applied on _____.

A. unweighted graphs

B. directed and weighted graphs

C. undirected and unweighted graphs

D. graphs having negative weight function

Question No:92

(Marks:1)

Vu-Topper RM

Bellman-Ford algorithm is slower than _____.

A. Prim's

B. Dijkstra's

Page 159

C. Graph Algorithm

D. Brute-force technique

Question No:93

(Marks:1)

Vu-Topper RM

In Bellman-Ford Algorithm, relaxation applies to every edge of the graph and repeat this _____ time.

A. V-1 **Page 159**

B. E-1

C. V+1

D. E+1

Question No:94

(Marks:1)

Vu-Topper RM

Which of the following is used in the data structure for implementing Dijkstra's Algorithm?

A. Stack's

B. Max heap

C. Priority queue

Google

D. Circular queue

Question No:95

(Marks:1)

Vu-Topper RM

In Prim's algorithm, If there is no edge from u to a vertex in S, we set the key value to _____.

A. 0

B. -1

C. ∞ **Page 151**

D. 1

Question No:96

(Marks:1)

Vu-Topper RM

Prim's algorithm is based on ----- strategy.

A. Greedy **Page 150**

B. Exponential

C. Divide and Conquer

D. Dynamic programming

Question No:97

(Marks:1)

Vu-Topper RM

Dijkstra's Algorithm is used to solve _____ problems.

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

D. Single-source shortest path

Page 154

Question No:98

(Marks:1)

Vu-Topper RM

The process of updating estimates in Dijkstra's algorithm is called _____.

- A. Insertion
- B. Updating
- C. Relaxation**
- D. Amendment

Page 154

Question No:99

(Marks:1)

Vu-Topper RM

_____ is commonly the running time of Dijkstra's Algorithm using the binary heap method.

- A. $\Theta(\log E)$
- B. $\Theta(V \log)$
- C. $\Theta(E \log V)$**
- D. $\Theta(\log V)$

Page 156

Question No:100

(Marks:1)

Vu-Topper RM

Kruskal's algorithm works by adding _____ in increasing order of weight (lightest edge first).

- A. Trees
- B. Edges**
- C. Vertices
- D. Weights

Page 147

Question No:101

(Marks:1)

Vu-Topper RM

Dijkstra's algorithm works on a weighted directed graph $G = (V, E)$ in which all _____ weights are non-negative.

- A. links

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Question No:106

(Marks:1)

Vu-Topper RM

As the Kruskal's algorithm runs, the edges in viable set A induce a _____ on the vertices.

- A. Set
- B. Tree
- C. Graph
- D. Forest**

Page 147

Question No:107

(Marks:1)

Vu-Topper RM

In Dijkstra's algorithm the estimated value of source vertex $d[s]$ is:

- A. Equal to 1
- B. Equal to 0**
- C. Greater than 0
- D. Greater than 1

Page 154

Question No:108

(Marks:1)

Vu-Topper RM

Equivalence relation partitions the vertices into _____ classes of mutually reachable vertices and these are the strong components

- A. Variance
- B. Non classes
- C. Equivalence**
- D. Non equivalence

Page 136

Question No:109

(Marks:1)

Vu-Topper RM

The ancestor and descendent relation can be nicely inferred by the _____ lemma.

- A. Node
- B. Division
- C. Addition
- D. Parenthesis**

Question No:110

(Marks:1)

Vu-Topper RM

Networks are _____ in the sense that it is possible from any location in the network to reach any other location in the digraph.

A. Not graphs.

B. Complete

Page 135

C. Incomplete

D. Transportation

Question No:111

(Marks:1)

Vu-Topper RM

In strong components algorithm, first of all DFS is run for getting _____ times of vertices.

A. Start

Page 138

B. Finish

C. Middle

D. Both start & finish

Question No:112

(Marks:1)

Vu-Topper RM

Timestamp structure of _____ is used in determining the strong components of a digraph.

A. DFS

Google

B. BFS

C. MST

D. Both DFS, BFS

Question No:113

(Marks:1)

Vu-Topper RM

In Timestamped DFS-cycles lemma, if edge (u, v) is a tree, forward or cross edge, then _____

A. $f[u] > f[v]$

B. $f[u] < f[v]$

C. $f[u] \leq f[v]$

D. $f[u] \geq f[v]$

Question No:114

(Marks:1)

Vu-Topper RM

The component digraph is necessarily _____.

- A. Cyclic
- B. Strong
- C. Acyclic**
- D. Straight

Page 136

Question No:115

(Marks:1)

Vu-Topper RM

In computing the _____ components of a digraph, vertices of the digraph are partitioned into subsets.

- A. Best
- B. Worst
- C. Weakly connected
- D. Strongly connected**

Page 135

Question No:116

(Marks:1)

Vu-Topper RM

There exist a unique path between any _____ vertices of a free tree.

- A. One
- B. Two**
- C. five
- D. three

Question No:117

(Marks:1)

Vu-Topper RM

The _____ given by DFS allow us to determine whether the graph contains any cycles.

- A. Order
- B. Time stamps**
- C. BFS traversing
- D. Topological sort

Page 130

Question No:118

(Marks:1)

Vu-Topper RM

Forward edge is:

- A. (u, v) where u is a proper descendent of v in the tree.

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

B. (u, v) where v is a proper descendent of u in the tree.

C. (u, v) where v is a proper ancestor of u in the tree.

D. (u, v) where u is a proper ancestor of v in the tree.

Question No:119

(Marks:1)

Vu-Topper RM

Once you enter a strong component, every vertex in the component is

_____.

A. Removed

B. Reachable

Page 137

C. not reachable

D. reachable some times

Question No:120

(Marks:1)

Vu-Topper RM

In Generic approach determining of Greedy MST, we maintain a subset

A of _____.

A. Paths

B. Edges

Page 143

C. Cycles

D. Vertices

Question No:121

(Marks:1)

Vu-Topper RM

If you find yourself in maze the better traversal approach will be :

A. DFS

B. BFS

C. Level order

D. DFS

Question No:122

(Marks:1)

Vu-Topper RM

Computing the strongly connected components of a digraph is a/an

_____ of the problem to determine whether a digraph is strongly connected or not.

A. Size

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Vu-Topper RM

A free tree with n _____ have exactly $n-1$ _____.

A. vertices,edges

Page 142

- B. vertices,nodes
- C. nodes,vertices
- D. vertices,nodes

Question No:124

(Marks:1)

Vu-Topper RM

_____ components are not affected by reversal of all edges in terms of vertices reachability.

- A. First two
- B. Last two
- C. Weakly connected

D. Strongly connected

Page 139

Question No:125

(Marks:1)

Vu-Topper RM

Adding any edge to a free tree creates a unique _____.

A. Vertex

B. Cycle

Page 142

C. Edge

D. Strong component

Question No:126

(Marks:1)

Vu-Topper RM

In computing the strongly connected components of a digraph, vertices of the digraph are _____ into subsets.

- A. Joined
- B. Deleted
- C. Created

D. Partitioned

Page 135

Question No:127

(Marks:1)

Vu-Topper RM

For _____ graphs, there is no distinction between forward and back edges.

- A. Large
- B. Medium
- C. Directed

D. Undirected

Page 130

Question No:128

(Marks:1)

Vu-Topper RM

A topological sort of a DAG is a _____ ordering of the vertices of the DAG such that for each edge (u, v) , u appears before v in the ordering.

A. Linear

Page 134

- B. Parallel
- C. Sequence
- D. Non-Linear

Question No:129

(Marks:1)

Vu-Topper RM

By breaking any edge on a cycle created in free tree, the free _____ is restored.

A. Tree

Page 142

- B. Edge
- C. Cycle
- D. Vertex

Question No:130

(Marks:1)

Vu-Topper RM

Which technique is used in the implementation of Kruskal solution for the MST?

A. Greedy Technique

Page 142

- B. Divide-and-Conquer Technique
- C. Dynamic Programming Technique

بری صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

For More Help Contact What's app 03224021365

D. The algorithm combines more than one of the above techniques i.e. Divide-and-Conquer and Dynamic Programming

Question No:131

(Marks:1)

Vu-Topper RM

A strongly connected component only apply to:

A. Directed Graph **Page 135**

B. Undirected Graph

C. Breadth First Search

D. Minimum Spanning Tree

Question No:132

(Marks:1)

Vu-Topper RM

The relationship between number of back edges and number of cycles in DFS is,

A. Both are equal

B. Back edges are half of cycles

C. Back edges are one quarter of cycles

D. There is no relationship between no. of edges and cycles

Page 131

Question No:133

(Marks:1)

Vu-Topper RM

Digraphs _____ in communication and transportation networks.

A. are used **Page 135**

B. are not used

C. parts are used

D. final value is used

Question No:134

(Marks:1)

Vu-Topper RM

Back edge is:

A. (u, v) where v is an ancestor of u in the tree. **Page 128**

B. (u,v) where u is an ancestor of v in the tree.

C. (u, v) where v is an predecessor of u in the tree.

D. None of above

There are no _____ edges in undirected graph.

- A. Back
- B. Both
- C. Cross**
- D. Forward

Page 130

Question No:136

(Marks:1)

Vu-Topper RM

In strong components algorithm, the form of graph is used in which all the _____ of original graph G have been reversed in direction.

- A. Edges**
- B. Trees
- C. Vertices
- D. Both edges & vertices

Page 138

Question No:137

(Marks:1)

Vu-Topper RM

Which activity creates a unique cycle in a free tree:

- A. adding root
- B. adding any edge**
- C. adding any vertex
- D. adding any sub tree

Page 142

Question No:138

(Marks:1)

Vu-Topper RM

You have an adjacency list for G, what is the time complexity to compute Graph transpose G^T ?

- A. $(V + E)$**
- B. $(V E)$
- C. (V)
- D. (V^2)

Page 138

Question No:139

(Marks:1)

D. (u, v) where u and v are either ancestor or descendent of one another.

Question No:152

(Marks:1)

Vu-Topper RM

In digraph $G=(V,E)$; G has cycle if and only if

A. The DFS forest has forward edge.

B. The DFS forest has back edge

Page 131

C. The DFS forest has both back and forward edge

D. BFS forest has forward edge

Question No:153

(Marks:1)

Vu-Topper RM

For each vertex $u \in (V - S)$,we associate a key _____.

A. $\text{key}[v-s]$

B. $\text{key}[s]$

C. $\text{key}[u]$

D. $\text{key}[v]$

Question No:154

(Marks:1)

Vu-Topper RM

In Kruskal's algorithm, the vertices will be stored in _____.

A. loops

B. sets

C. nodes

D. links

Question No:155

(Marks:1)

Vu-Topper RM

An edge (u, v) _____ $E - A$ is safe if A _____ $\{(u, v)\}$ is viable.

A. ϵ, U

B. U, ϵ

C. ϵ, Π

D. Π, U

Question No:156

(Marks:1)

Vu-Topper RM

Which of the following statement is true.

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

- A. Kruskal's algorithm is used to find minimum spanning tree of a graph, time complexity of this algorithm is $O(EV)$
- B. Kruskal algorithm is multiple source technique for finding MST.
- C. Both I and II
- D. Kruskal's algorithm (choose best non-cycle edge) is better than Prim's (choose best Tree edge) when the graph has relatively few edges**

Question No:0_1

(Marks:1)

Vu-Topper RM

If we encode and compress text using ASCII standard each character is represented b

- A. Fixed length code word of 4 bits
- B. Variable length code word up to 4 bits
- C. Fixed length code word of 8 bits**
- D. Variable length code word up to 8 bits

Question No:157

(Marks:1)

Vu-Topper RM

In Activity Selection, we say that two activities are non-interfering if their start-finish interval _____ overlap.

- A. Do
- B. Do not. ok**

False

Question No:181

(Marks:1)

Vu-Topper RM

Huffman algorithm uses a greedy approach to generate an prefix code T that minimizes the expected length $B(T)$ of the encoded string.

True

False

Question No:182

(Marks:1)

Vu-Topper RM

An optimization problem is one in which you want to find the _____ solution.

A. Not a solution

B. An algorithm

C. Good solution

D. The best solution

ok

Question No:183

(Marks:1)

Vu-Topper RM

Although it requires more complicated data structures, Prim's algorithm for a minimum spanning tree is better than Kruskal's when the graph has a large number of vertices

True

False

Question No:184

(Marks:1)

Vu-Topper RM

If a problem is in NP, it must also be in P.

A. True

B. False

C.

unknown

Question No:185

(Marks:1)

Vu-Topper RM

What is generally true of Adjacency List and Adjacency Matrix representations of graphs?

A. Lists require less space than matrices but take longer to find the weight of an edge (v1,v2)

B. Lists require less space than matrices and they are faster to find the weight of an edge (v1,v2)

C. Lists require more space than matrices and they take longer to find the weight of an edge (v1,v2)

D. Lists require more space than matrices but are faster to find the weight of an edge (v1,v2)

Question No:186

(Marks:1)

Vu-Topper RM

If a graph has v vertices and e edges then to obtain a spanning tree we have to delete

A. v edges.

B. $v - e + 5$ edges

C. $v + e$ edges.

D. None of these

Question No:187

(Marks:1)

Vu-Topper RM

Maximum number of vertices in a Directed Graph may be $|V^2|$

True

False

Question No:188

(Marks:1)

Vu-Topper RM

The Huffman algorithm finds a (n) __solution.

A. Optimal

B. Non-optimal

C. Exponential

D. Polynomial

Question No:189

(Marks:1)

Vu-Topper RM

Edge (u, v) is a forward edge if

A. u is a proper descendant of v in the tree

B. v is a proper descendant of u in the tree pg#129

C. None of these

Question No:190

(Marks:1)

Vu-Topper RM

In counting sort, once we know the ranks, we simply _ numbers to their final positions in an output array.

A. Delete

B. copy

C. Mark

D. arrange

Question No:191

(Marks:1)

Vu-Topper RM

Dynamic programming algorithms need to store the results of intermediate sub-problems.

True

False

Question No:192

(Marks:1)

Vu-Topper RM

_____ is a graphical representation of an algorithm

A. notation

B. notation

C. Flowchart

D. Asymptotic notation

Question No:193

(Marks:1)

Vu-Topper RM

Which of the following is calculated with **big o notation**?

A. Lower bounds

B. Upper bounds

C. Both upper and lower bound

بري صحبت سے تہائی بہتر ہے اور تہائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

D. Medium bounds

Question No:194

(Marks:1)

Vu-Topper RM

Merge sort makes two recursive calls. Which statement is true after these recursive calls finish, but before the merge step?

A. The array elements form a heap

B. Elements in each half of the array are sorted amongst themselves.

C. Elements in the first half of the array are less than or equal to elements in the second half of the array

D. None of the above

Question No:195

(Marks:1)

Vu-Topper RM

What is the solution to the recurrence $T(n) = T(n/2) + n$, $T(1) = 1$

A. $O(\log n)$

B. $O(n)$

C. $O(n \log n)$

D. $O(2n)$

Question No:196

(Marks:1)

Vu-Topper RM

Consider the following Huffman Tree The binary code for the string TEA is

A. 00 010

B. 011 00 010

C. 10 00 110

D. 11 10 110

- A. $O(\log n)$
- B. $O(n \log n)$
- C. $O(n^2 \log n)$
- D. $O(\log^2 n)$

Question No:291 (Marks:1) **Vu-Topper RM**
word Algorithm comes from the name of the muslim author ____
Abu Ja'far Mohammad ibn Musa al-Khowarizmi.

Question No:292 (Marks:1) **Vu-Topper RM** Al-Khwarizmi's work was written in a book titled ____
al Kitab al-mukhtasar fi hisab al-jabr wa'l-muqabalah

Question No:293 (Marks:1) **Vu-Topper RM**
Random access machine or RAM is a/an
A. Machine build by Al-Khwarizmi
B. Mechanical machine
C. Electronics machine
D. Mathematical model

Question No:294 (Marks:1) **Vu-Topper RM** A
RAM is an idealized machine with ____ random-access memory.
A. 256MB
B. 512MB
C. 100GB
D. an infinitely large

Question No:295 (Marks:1) **Vu-Topper RM**
What will be the total number of max comparisons if we run brute-force maxima algorithm with n elements?
A. $2n$
B. $2nn$

بري صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

C. n

D. $8n$

Question No:296

(Marks:1)

Vu-Topper RM

Consider the following code: For($j=1; j<n; j++$)

For($k=1; k<15; k++$)

For($l=5; l<n; l++$)

{

Do_something_constant();

}

What is the order of execution for this code.

A. $O(n)$

B. $O(n^3)$

C. $O(n^2 \log n)$

D. $O(n^2)$

Question No:297

(Marks:1)

Vu-Topper RM

Is it possible to sort without making comparisons?

Yes

No

Question No:298

(Marks:1)

Vu-Topper RM

When we call heapify then at each level the comparison performed takes time

A. It will take $\Theta(1)$

B. Time will vary according to the nature of input data

C. It can not be predicted

D. It will take $\Theta(\log n)$

Question No:299

(Marks:1)

Vu-Topper RM

In Quick sort, we don't have the control over the sizes of recursive calls

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

A. True

B. False

C. Less information to decide

D. Either true or false

Question No:300

(Marks:1)

Vu-Topper RM

For Chain Matrix Multiplication we cannot use divide and conquer approach because,

A. We do not know the optimum k

B. We use divide and conquer for sorting only

C. We can easily perform it in linear time

D. Size of data is not given

Question No:301

(Marks:1)

Vu-Topper RM

Suppose we have three items as shown in the following table, and suppose the capacity of the knapsack is 50 i.e. $W = 50$.

Item	Value	Weight
1	60	10
2	100	20
3	120	30

The optimal solution is to pick

A. Items 1 and 2

B. Items 1 and 3

C. Items 2 and 3

D. None of these

Question No:302

(Marks:1)

Vu-Topper RM

who invented the quick sort

C.A.R. Hoare

main elements to a divide-and-conquer

Divide, conquer, combine.

Question No:304

(Marks:1)

Vu-Topper RM

Mergesort is a stable algorithm but not an in-place algorithm.

True

False

Question No:305

(Marks:1)

Vu-Topper RM

Counting sort the numbers to be sorted are in the range 1 to k where k is small.

True

False

Question No:306

(Marks:1)

Vu-Topper RM

In selection algorithm, because we eliminate a constant fraction of the array with each phase, we get the

A. Convergent geometric series

B. Divergent geometric series

C. None of these

Question No:307

(Marks:1)

Vu-Topper RM

In RAM model instructions are executed

One after another

Parallel

Question No:308

(Marks:1)

Vu-Topper RM

Due to left-complete nature of binary tree, heaps can be stored in

A. Link list

B. Structure

C. Array

D. None of above

If Matrix-A has dimensions “3x2” and Matrix-B has dimensions “2x3”, then multiplication of Matrix-A and Matrix-B will result a new Matrix-C having dimensions.

A. 3x2

B. 2x3

C. 2x2

D. 3x3

ok

Question No:395

(Marks:1)

Vu-Topper RM

A/an _____ is one in which you want to find, not just a solution, but the best solution.

A. Optimization problem

ok

B. Divide and Conquer

C. NP complete problem

D. Best problem

Question No:396

(Marks:1)

Vu-Topper RM

Fractional Knapsack is founded on _____ method.

A. Greedy

ok

B. Recursive

C. Divide and Conquer

D. Dynamic programming

Question No:397

(Marks:1)

Vu-Topper RM

Find the maximum value of the items which can carry using knapsack weight capacity

=50

ITEM WEIGHT	10	20	30	70
----------------	----	----	----	----

بري صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

For More Help Contact What's app 03224021365

VALUE	70	20	80	200
-------	----	----	----	-----

- A. 90
- B. 280
- C. 200
- D. 100**

Question No:398

(Marks:1)

Vu-Topper RM

If the graph is represented using an adjacency matrix, then Breadth-first search takes-----time.

- A. $O(E+1)$
- B. $O(V^2)$**
- C. $O(V)$
- D. $O(E)$

Question No:399

(Marks:1)

Vu-Topper RM

In inductive approach of knapsack problem, we consider 2 cases,

____ Or ____.

- A. Recursive, Iterative
- B. Median, Mode
- C. Leave object, Take object**
- D. Sequentially, Parallel

ok

Question No:400

(Marks:1)

Vu-Topper RM

A Greedy algorithm can NOT be used to solve all the _____ problems.

- A. Dynamic programming**
- B. Memorization programming
- C. Edit-distance programming
- D. Storing value programming

ok

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Question No:401

(Marks:1)

Vu-Topper RM

In Huffman encoding, the _____ is the number of occurrences of a character divided by the total characters in the message.

A. Counting

B. Parsing

C. Relative Probability

ok

D. Weight

Question No:402

(Marks:1)

Vu-Topper RM

The Binary Tree constructed by a Huffman Encoding is a:

A. Full Binary Tree

B. Partial Binary Tree

C. Incomplete Binary Tree

D. None of the given option

Question No:403

(Marks:1)

Vu-Topper RM

Following is not the application of Edit Distance Problem.

A. Speech recognition

B. Spelling correction

C. Ascending order

D. Computational Molecular Biology

Question No:404

(Marks:1)

Vu-Topper RM

Consider three matrices X, Y, Z of dimensions 1×2 , 2×3 , 3×4 respectively. The number of multiplications of $X(YZ)$ is:

A. 32

ok

B. 26

C. 24

D. 16

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Question No:405

(Marks:1)

Vu-Topper RM

In-----Knapsack Problem, limitation is that an item can either be put in the bag or not. Fractional items are not allowed.

A. 0

B. 1

C. 0/1

D. Fractional

Question No:406

(Marks:1)

Vu-Topper RM

An in-place sorting algorithm is one that uses additional array for storage.

A. Always

B. Permanently

C. Does not

D. Sometime

Question No:407

(Marks:1)

Vu-Topper RM

If Matrix-A has dimensions "pxq" and Matrix-B has dimensions "qxr", then multiplication of Matrix-A and Matrix-B will result a new Matrix-C having dimensions.

A. P x q

B. P x r

C. q x r

D. q x p

Question No:408

(Marks:1)

Vu-Topper RM

Counting sort is suitable to sort the elements in range 1 to K.

A. K is large

B. K is small

C. K may be large or small

D. None

بري صحبت سے تہائی بہتر ہے اور تہائی سے نيك صحبت بہتر ہے

Question No:409

(Marks:1)

Vu-Topper RM

When matrix A of 5×3 is multiply with matrix B of 3×4 then the multiplication required is:

A. 15

B. 12

C. 36

D. 60

Question No:410

(Marks:1)

Vu-Topper RM

-----is a linear time sorting algorithm.

A. Merge sort

B. Quick sort

C. Bubble sort

D. Radix sort

Question No:411

(Marks:1)

Vu-Topper RM

In Dynamic Programming approach, we do not store the solution to each sub problem in case if it reappears.

True

False

Question No:412

(Marks:1)

Vu-Topper RM

Dynamic Programming approach is usually useful in solving optimization problem.

True

False

Question No:413

(Marks:1)

Vu-Topper RM

Which of the following algorithms provides an optimal solution for the activity selection problem?

A. Divide and Conquer

B. Brute force

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

C. Greedy
D. Recursive

ok

Question No:414

(Marks:1)

Vu-Topper RM

A graph is _____ if every vertex can reach every other vertex.

A. Connected

ok

- B. Cycle
- C. Acyclic
- D. Loop

Question No:415

(Marks:1)

Vu-Topper RM

In Huffman encoding when a new node is created by combining two nodes, the new node is placed in the _____.

A. Priority queue

ok

- B. Linked list
- C. Min heap tree
- D. Graph traversal

Question No:416

(Marks:1)

Vu-Topper RM

In _____ algorithm, you hope that by choosing a local optimum at each step, you will end up at a global optimum.

- A. Simple
- B. Divide and conquer
- C. Greedy**
- D. Brute Force

ok

Question No:417

(Marks:1)

Vu-Topper RM

The string "Imncde" is coded with ASCII code, the message length would be _bits.

- A. 24
- B. 36
- C. 48**
- D. 60

بري صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

Question No:418

(Marks:1)

Vu-Topper RM

For graph traversal, Breadth-first search strategy _____

- A. Is always recursive
- B. Cannot be recursive
- C. Cannot be non-recursive
- D. Can be both recursive and non-recursive** ok

Question No:419

(Marks:1)

Vu-Topper RM

In activity scheduling algorithm , the width of a rectangle __

- A. Is always ignored
- B. Directs towards recursion
- C. Should be maximized
- D. Indicates the duration of an activity**

Question No:420

(Marks:1)

Vu-Topper RM

If the graph is represented using an adjacency list, then Breadth-first search take time

- A. $O(V^2)$
- B. $O(V)$
- C. $O(V+E)$**
- D. $O(E+1)$

Question No:421

(Marks:1)

Vu-Topper RM

Suppose you are given infinite coins of 1, 2, 3, and 4. Select the ways of the minimum number of coins that required to achieve a sum of 6:

- A. 1
- B. 2** ok
- C. 3
- D. 4

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Question No:422

(Marks:1)

Vu-Topper RM

sing ASCII standard the string “greedy” will be encoded with

A. 48 bitS

B. 20 bits

C. 44 bits

D.40 bits

Question No:423

(Marks:1)

Vu-Topper RM

The Huffman codes provide a method of _____ data efficiently.

A. Reading/Writing

B. Encoding/Decoding

ok

B. Divide/Conquer

C. Inserting/Deleting

Question No:424

(Marks:1)

Vu-Topper RM

In the context of activity selection algorithm, time s dominated by sorting of the activities by-----.

A. Start Times

B. Finish Times

C. Average Times

D.CPU Burst Times

Question No:425

(Marks:1)

Vu-Topper RM

Time complexity of the “0-1” knapsack algorithm depends on _____

A. Number of items

B. Capacity of the knapsack

C. Size of the Table

D. Number of items and capacity of knapsack

ok

Question No:426

(Marks:1)

Vu-Topper RM

The greedy approach gives us an optimal solution when the coins are all powers of a _____ denomination.

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے
