Definition of E-Assessment *Names of e-assessment*

mediated Electronic assessment, also known as e-assessment, online assessment, computer-assisted/mediated assessment and computer-based assessment, is the use of information technology in various forms of assessment such as educational assessment, health assessment, psychiatric assessment, and psychological assessment. This may utilize an online computer connected to a network. This definition embraces a wide range of student activities ranging from the use of a word processor to on-screen testing.

Introduction

E-assessment is becoming more widely used by exam awarding bodies, particularly those with multiple or international study centres and those that offer remote study courses.

Specific types of e-assessment include multiple-choice online/electronic submission, to a peer-assessment exercise in which students are required to assess each other's work. Different types of online assessments contain elements of one or more of the following components depending on the assessment's purpose: formative, diagnostic, or summative. Instant and detailed feedback may (or may not) be enabled.

In education assessment, large-scale examining bodies find the journey from traditional paper-based exam assessment to fully electronic assessment a long one. Practical considerations

xi. These text mining tools are in vogue in academia. *Long question*

- Voyant-tools.org : "Voyant Tools is a web-based reading and analysis environment for digital texts."
- Wordle : A robust word cloud generator with extensive shape, color and font options.
- Google Books NGram Viewer : Analyzes historical word occurrence, usage and changes over time and allows users to download data for more intensive research.
- Culturomics - Google Ngrams Add-on : An add-on for Google Ngrams to download data sets.
- Time Magazine Corpus : Offers access to American Mainstream Culutral Text Analysis via the complete text of the Time Magazine Archive (1923-2006)
- Juxta : Juxta is a cross-platform tool for collating, comparing, and analyzing any kind or number of textual objects.

xii. These tools facilitate in data visualization.

- R-Project : R is an integrated suite of software facilities for data manipulation, calculation and graphical display.
- Data-Driven Documents (D3js) : D3.js is a JavaScript library for manipulating documents based on data. D3 helps you bring data to life using HTML, SVG, and CSS.
- Walrus - Graph Visualization Tool : Walrus is a tool for interactively visualizing large directed graphs in three-dimensional space. By employing a fish-eye-like distortion, it provides a display that simultaneously shows local detail and the global context.

xii. The given diagram illustrates the learning tools.

and the possibilities of cultivating ubiquitous, learner-centred, autonomous learning.

L2 Reading Theories

Reading theories for both L1 and L2 have attempted to explain reading processes from three perspectives: structural, cognitive, and metacognitive. Structural perspectives are also referred to by researchers as the "bottom-up" (Chun and Plass 1997; Nunan 1991) or the "outside-in" (McCarthy 1999) views. They focus on the printed form of a text and postulate that meaning exists in the text and readers are passive recipients of the information.

According to this view reading is primarily a matter of decoding a series of written symbols into their aural equivalents in the quest to make sense of the text. For successful decoding, readers need to acquire a set of hierarchically ordered sub-skills that sequentially help improve comprehension ability (LaBerge and Samuels 1985). This view, however, has been criticized as being inadequate due to overemphasis on the formal features of the language, mainly words and structure, and downplaying the significance of contextual comprehension factors.

The cognitive view brings the role of background knowledge into play and highlights the interactive nature of reading and the constructive aspects of comprehension. It is also referred to as the "top-down" model and was introduced to counteract the over-reliance on linguistic forms in the structural perspective of reading (Chun and Plass 1997; Nunan, 1991). From the cognitive view, reading is regarded as a psycholinguistic guessing game, a process in which readers sample the text, make hypotheses, confirm or reject them, make new hypotheses, and so forth (Goodman, 1967). Background knowledge and schema development are seen as crucial in

5. Peer Support

Peer support is an integral ^{me} part of a blended approach, as teachers cannot hand to help learners all the time. Peer support is relevant in any learning environment but it is even more relevant in a blended approach because blended learning facilitates peer support. It is easier to ask one's peers a question online than in the classroom, whether for lack of time or fear of appearing stupid. Peer support fills gaps in understanding. It also encourages the sharing of ideas about

situations. Integrating technology isn't about using complex technology programs but rather simplifying technology choices and focusing on how technology connects to learning.

Preparing for the Future

^{now} Integrating technology into the curriculum is necessary to stay updated and take benefit of the latest technological advances happening around the globe. We must prepare our teachers and students for the digital future and one part of that means equipping them with technology. In today's world and the future era, online education as well as the capability of using computers, laptops, tablets and the like are a must.

These 21st-century skills are essential to be successful in this day and age. Jobs that may not have had a digital component in the past may have one now. Education isn't just about memorizing facts and vocabulary words; it's about solving complex problems and collaborating with others in the workforce. Ed-tech in the classroom prepares students for their future and sets them up for this increasing digital economy.

Therefore, regardless of the field of education one belongs to, technology integration is a must for future preparation. The teachers and students who will be unable to do so will lag
