

ENG504

Mid-Term

ABSTRACT

This comprehensive collection of notes is accurately crafted to empower students to excel academically, ensuring they achieve a minimum of 80% marks in their examinations. The content is organized with clarity and precision, focusing on key concepts, critical analyses, and practical applications tailored to the syllabus. These notes serve as a reliable resource for both thorough preparation and last-minute revision. Designed to inspire confidence and mastery, this guide is an essential tool for students striving for academic excellence.

Spring 2025

Q. Names of Cognitive Theories

- Information Processing Theory
- ACT Model (Anderson)
- Connectionism (Emergentism)
- Processability Theory

Q. Krashen's Monitor Model (5 Hypotheses)

1. **Acquisition-Learning Hypothesis**
2. **Monitor Hypothesis**
3. **Natural Order Hypothesis**
4. **Input Hypothesis**
5. **Affective Filter Hypothesis**

Q. Output Hypothesis (Swain)

Functions:

- Noticing/Triggering
- Hypothesis Testing
- Metalinguistic Reflection

Q. Processability Theory (Pienemann)

Learners follow a fixed sequence in acquiring grammatical structures depending on their cognitive capacity to process them.

Q. Connectionists in SLA

Two Approaches:

- **Processing Theorists:** focus on how learners process language in real time.
- **Emergentists/Constructivists:** language arises from repeated exposure and pattern recognition, not innate grammar.

Q. Chomsky's Criticism of Skinner

Chomsky argued that behaviorism can't explain the creative and generative nature of language. He proposed an innate **Universal Grammar (UG)** mechanism.

Q. Universal Grammar (UG) Approach

- Language acquisition is guided by inborn mental structures.
- UG provides a framework common to all languages.

Q. Teachability Hypothesis

Structures can only be taught when learners are ready to acquire them (in the next stage of the acquisition sequence).

Q. Perceptual Saliency Approach

Children attend to linguistically salient items first (e.g., endings of words), driving acquisition.

Q. Negative Evidence in SLA

- Input that shows learners what is not acceptable.
- Includes corrections, recasts, and feedback.

Q. Recasts (as Negative Feedback)

Rephrasing learner's error without overt correction. Helps learners notice errors and improve accuracy.

Q. Fossilization

The process by which incorrect linguistic forms become fixed despite exposure to input or instruction.

Q. Sociolinguistics

Study of how language varies and is used in different social contexts. Concerned with identity, power, and cultural norms.

Q. Cognitive vs Affective Factors

- **Cognitive:** intelligence, aptitude, memory
- **Affective:** motivation, anxiety, attitudes

Q. ACT Model (Anderson)

Learning occurs in stages:

1. Declarative
2. Procedural
3. Automatic

Q. Deep vs Surface Processing (Biggs)

- **Deep:** meaningful engagement, personal connection

- **Surface:** minimal engagement, task-focused only

Q. Zone of Proximal Development (ZPD)

The gap between what a learner can do alone and what they can do with help.

Q. Scaffolding

Temporary support provided by a teacher or peer to help learner achieve a task in the ZPD.

Q. Private Speech (Ohta, 2001)

1. Repetition
2. Vicarious Response
3. Manipulation

Q. Self-Regulation

The shift from external to internal control over learning. Achieved through scaffolding and interaction.

Q. Mediation

Language and cultural tools (especially L1) mediate learning, interaction, and cognition.

Q. BICS vs CALP (Cummins)

- **BICS:** Basic Interpersonal Communication Skills (social language)
- **CALP:** Cognitive Academic Language Proficiency (academic language)

Q. Functional Approaches (3 Names)

- Systemic Functional Linguistics (Halliday)
- Functional Typology
- Function-to-Form Mapping

Q. 3 Tools for Learning

- Scaffolding
- Mediation
- Inner Speech

Q. 3 Internal Factors Affecting SLA

- Age

- Personality
- Motivation

Q. Five Orientations (Clement et al., 1994)

1. Friendship and Travel
2. Identification with L2 group
3. Interest in culture
4. Career improvement
5. Understanding L2 media

Q. Self-Efficacy Theory

Belief in one's own ability to learn a language enhances performance and motivation.

Q. Language Awareness

Ability to analyze language form and function, essential for noticing gaps and improving performance.

Q. Form vs Function

- **Form:** structure/grammar of a language
- **Function:** communicative purpose of a structure

Q. Three Stages of Knowledge (Anderson)

1. Declarative
2. Procedural
3. Automatic

Q. Cognitive Theories in SLA

The major cognitive theories include:

- **Information Processing Theory** (McLaughlin, Anderson's ACT Model)
- **Processability Theory** (Pienemann)
- **Emergentist/Connectionist Approach** – language learning occurs through repeated exposure to linguistic patterns, without rule learning.

Q. Krashen's Monitor Model Hypotheses

Krashen proposed five hypotheses:

1. **Acquisition-Learning Hypothesis**
2. **Monitor Hypothesis**

3. **Natural Order Hypothesis**
4. **Input Hypothesis**
5. **Affective Filter Hypothesis.**

Q. Negative Evidence in SLA

Negative evidence refers to information provided to learners about what is not possible or grammatical in the target language (e.g., corrections, recasts). It helps learners modify incorrect hypotheses about the language.

Q. Importance of Negative Evidence

It is important because:

- It provides feedback on what is ungrammatical.
- Helps learners adjust their internal grammar.
- Recasts serve as subtle corrections that can aid language development.

Q. Chomsky's Criticism on Skinner (Behaviorism)

Chomsky criticized Skinner by stating:

- Language cannot be learned purely through stimulus-response mechanisms.
- Children create novel sentences they've never heard before, implying innate linguistic capability.
- He proposed the idea of **Universal Grammar (UG)**, an inborn faculty for language learning.

Q. Connectionist Approach in SLA

- Brain functions like a computer with neural networks.
- Learning happens by forming associations, not rules.
- Emphasizes **pattern recognition** through exposure and repetition.
- Seen as a **transition theory** explaining how associative patterns emerge in learners.
