Final term 2020

1. Define historiography?

Historiography is the method of doing historical research or of gathering and analyzing historical evidence

2. Explain validity of secondary data?

Reliability and Validity

Existing statistics and secondary data are not trouble free. Researchers must be concerned about validity and reliability .

A common error is the fallacy of misplaced concreteness. Someone gives a false impression of accuracy by quoting statistics in greater detail than warranted by how the statistics were collected.

Validity problems

Researcher's theoretical definition may not match with government agency or organization that collected the data. *Unemployed.*

Researcher lack control over how the data were collected. Data collection as part of job. No quality control – systematic errors. Typographical errors.

3. How can we categorized descriptive statistics give example?

Descriptive statistics describe numerical data. They can be categorized by the number of variables involved: univariate, bivariate, or multivariate (for one, two, and three or more variables). Univariate statistics describe one variable.

Researchers often want to summarize the information about one variable into a single number. They use three measures of central tendency, or measures of the center of the frequency distribution: mean, median and mode, which are often called averages (a less precise and less clear way to say the same thing). The mode is simply the most common or frequently occurring number. The median is the middle point. The mean also called the arithmetic average, is the most widely used measure of central tendency. A particular central tendency is used depending upon the nature of the data.

4. Different qualitative and quantitative research with example?

Qualitative research

To gain an in-depth understanding and explanation of some particular social phenomenon The data collection is done by interviewing; however, an understanding of the social phenomenon and personal lived experiences of individuals might be gained via non-intrusive qualitative approaches in which there searcher might use texts, journals, written narratives or observations.

Quantitative research

Quantitative research, on the other hand, explores descriptive analysis of characteristics through variables or answers questions about the relationships among variables.

5. Emnurate the part of main body of reseach report?

Introduction:

-- Background
-- Objectives
Methodology.
Results → can be divided into different areas.
Limitations.
Conclusions and recommendations
References.
Acknowledgements
Appended parts Data collection forms (questionnaires, check list, interview guide, other forms).
Detailed calculations. General tables. Other support material. Bibliography, if needed.

6. What points should one keep in mind while putting other research work done in table?

I. Give each table a number. II.
Give each table a title.
II. Label the row and column variables, and give name to each of the variable categories.
V. Include the totals of the columns and rows. These are called as marginal.
. Each number or place that corresponds to the intersection of category for each variable is cell of a table.
VI. Missing information to be given under the table

7. What is running record?

Files or existing statistical documents maintained by organizations. Vital statistics.

8. Explain participant and non-participant observation study?

Participant Observation

Participant observation is immersion in a culture. Ideally, the ethnographer lives and works in the community for six months to a year or more, learning the language and seeing patterns of behaviour over time. Long-term residence helps the researcher internalize the basic beliefs, fears, hopes and expectations of the people under study. (1989:45)

Nonparticipant Observation

Non-participant observation involves merely watching what is happening and recording events on the spot.

"Non-participant observation exists only where interactions are viewed through hidden camera and recorder or through one-way mirror" (1984: 143).

9. Enlist 5 qualitative research John W Creswell in his book?

Five qualitative research methods are discussed in this subject as discussed by John W. Creswell in his book. Following are the five qualitative research methods:

1. Narrative Research. 2. Phenomenology 3. Grounded Theory. 4. Ethnography. 5. Case Study

10. Explain function of record in focus group?

Keep a record of the content as well as emotional reactions and nature of group interactions.
Record the following:
-Date, time, and place.
-Names and characteristics of participants.
-Description of group dynamics
Opinions of the participants, as far as possible in their own words, especially the key statements.
Emotional aspects (reluctance, strong feelings attached to certain opinions)
- Vocabulary used.

Marks Questions

11. Difference between survey interview and field research interview?

Survey Interview: It has a clear beginning and end. • The same standard questions are asked and in same sequence.
• Interviewer appears neutral at all times. Interviewer asks questions, and the respondent answers. • It is almost always with one respondent alone. Professional tone and business like focus; diversions ignored. • Closed ended Qs are common; rare probes. • Interviewer controls the pace and direction of interview. Social context of interview is ignored and assumed to make no difference. • Interviewer attempts to mold the communication in a standard framework.

FR Interview: The beginning and end are not clear. • Questions and order are tailored to specific people and situations. • Interviewer shows interest in responses, encourages elaboration. It is like a friendly conversational exchange, with more interviewer questions. • It can occur in group setting or with others in area. Interspersed with jokes, stories, diversions. • Open ended Qs are common; probes frequent. • Interviewer and member jointly control the pace and direction of interview. Social context of interview is noted and seen as important for interpreting the meaning or responses. • Interviewer adjusts to member's norms and language usage.

12. Enlist 6 features of theoretical framework?

1. Make an inventory of variables
2. Specify the direction of relationship
3. Logic for the proposed relationship
4. Make an inventory of propositions
5. Arrange propositions sequentially
6. Present schematic diagram

14. Difference between ethnography and phenomenology?

Phenomenology: A phenomenological study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.

Ethnography: Ethnography is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values, behaviors, beliefs, and language of a culture-sharing group (Harris, 1968). An ethnography focuses on an entire cultural group which may be small, but typically it is large, involving many people who interact over time 'ethnography involves extended observations of the group, most often through participant observation.

15. Difference between scale and index?

Scale is a measure to capture the intensity, direction, level, or potency of a variable. Arranges responses on a continuum. A scale can use single indicator or multiple indicators. Ordinal level.

Index is a measure in which researcher adds or combines several distinct indicators of a construct into a single score. Composite score.

17. Differentiate between narrative research and phenomenological research?

Narrative research • "Narrative is understood as a spoken or written text giving an account of an event/action or series of events/actions, chronologically connected". • The procedures for implementing this research consist of focusing on studying one or two individuals, gathering data through the collection of their stories, reporting individual experiences, and chronologically ordering (or using life course stages) the meaning of those experiences.

A phenomenological study describes the meaning for several individuals of their

lived experiences of a concept or a phenomenon. • The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.

18. Differentiate between critical & realistic ethnography?

The realist ethnography is a traditional approach used by cultural anthropologists. It reflects a particular stance taken by the researcher toward the individuals being studied •
The critical ethnography involves the authors advocate for the emancipation of groups marginalized in society.

19. Challenges in implementing case study?

The case study researcher must decide which bounded system to study
The researcher must consider whether to study a single case or multiple cases.
Selecting the case requires that the researcher establish a rationale for his or her purposeful sampling strategy for selecting the case and for gathering information about the case.

20. What are the limitations of focused group discussion?

The moderator may influence the participants (bias).
FGDs have limited value in exploring complex beliefs of individuals.
FGDs can paint a picture of what is socially acceptable in a community rather than what is actually occurring or believed. (real and ideal problems)

21. Main body of report?

Introduction. -- Background -- Objectives Methodology. Results can be divided into different areas.
Conclusions and recommendations Acknowledgements. Limitations References.
Constitutes the bulk of the report. It includes: Introduction, methodology, results, and limitations of the study. It finishes with conclusions and recommendations based on results.

Long 5 Marks

22. Difference between cross sectional and longitudinal studies?

Cross-Sectional Studies are carried out once and represent a snapshot of one point in time. Data are collected just once, perhaps over a period of days or weeks or months, in order to answer the research question.

Longitudinal Studies are repeated over an extended period. The advantage of longitudinal studies is that it can track changes over time. For example, the researcher might want to study employees' behavior before and after a change in the top management, so as to know what effects the change accomplished. Here, because data are gathered at two different points in time, the study is not cross- sectional or of the one-shot kind, but is carried longitudinally across a period of time. Such studies, as when data on the dependent

variable are gathered at two or more points in time to answer the research question, are called longitudinal. Longitudinal studies can be panel studies and cohort studies which were discussed earlier.

23. Write the procedure of implementation in narrative research?

1. Determine if the research problem or question best fits narrative research. Narrative research is best for capturing the detailed stories or life experiences of a single life or the lives of a small number of individuals.
2 . Select one or more individuals who have stories or life experiences to tell, and spend considerable time with them gathering their stories through multiples types of information.
3. Collect information about the context of these stories. Narrative researchers situate individual stories within participants' personal experiences (their jobs, their homes), their culture (racial or ethnic), and their historical contexts (time and place).
4. Analyze the participants' stories, and then "restore' them into a framework that makes sense. Restoring is the process of reorganizing the stories into some general type of framework. 5. Collaborate with participants by actively involving them in the research. As researchers collect stories, they negotiate relationships, smooth transitions, and provide ways to be useful to the participants..

24. What is focus group discussion?write the purpose of FGD?

A focus group discussion is a group discussion of 6-12 persons
Guided by a facilitator,
Participants talk freely and spontaneously about a certain issue.

The purpose of FGD:

To obtain in-depth information on concepts, perceptions, and ideas of the group.
More than an question-answer interaction.
Group members discuss the topic among themselves.

Long 10 Marks

Role of recorder in FGD 10 marks

Functions of the Recorder

 Keep a record of the content as well as emotional reactions and nature of group interactions. Record the following: -

Date, time, and place. –

Names and characteristics of participants.

- Description of group dynamics (level of participation, presence of a dominant participant, level of interest).
- Opinions of the participants, as far as possible in their own words, especially the key statements. – Emotional aspects (reluctance, strong feelings attached to certain opinions). – Vocabulary used.

 Assist the facilitator by drawing his/her attention to missed topics or missed comments from the participants. Help the facilitator resolve the conflict if necessary. Make sure a copy of the list of topics and key probe questions is available and referred to during the FGD.

What is research 2

Gathering information needed to answer a question, and thereby help in solving a problem.

Systematic and organized effort to investigate.

Two types of grounded theory study 2

The two popular approaches to grounded theory are the systematic procedures of Strauss and Corbin (1990, 1998) and the constructivist approach of Charmaz (2005, 2006).

In the more systematic, the investigator seeks to systematically develop a theory that explains process, action, or interaction on a topic.

Charmaz‟s approach is known as the constructivist grounded theory method as it

adheres to a constructivist philosophical approach, wherein both the researcher and participants mutually co-construct meaning during data collection and analysis.

The Components of the Theoretical Framework

1. Make an inventory of variables
Identify the variables relevant to the study.
Search the literature, talk with informants, and observe

2. Specify the direction of relationship
Theorize the direction of relationship among the variable → negative or positive

3. Logic for the proposed relationship
Theorize the logical relationship between different variables.
Argument could be built up on the basis of previous studies, observations, inferences.

4. Make an inventory of propositions
Stipulation of logical relationship between two variables ends up in a proposition.
Number of interrelationships resulting in a number of propositions.
Each proposition supported by rigorous logic.
Take stock of the propositions.

5.Arrange propositions sequentially
Interlink the propositions and arrange them sequentially.
Axiomatic derivation.
This will be theoretical framework

6. Present schematic diagram
Helps in understanding the theorized relationships among the variables.

Types of case studies.?

Types of case studies:

In single instrumental case study, the researcher focuses on an issue or concern, and then selects one bounded case to illustrate this issue.

In collective/multiple case study, the one issue or concern is again selected, but the inquirer selects multiple case studies to illustrate the issue.

In intrinsic case study, focus is on the case itself because the case presents an unusual or unique situation

Data collection methods?

Data collection methods

. Primary or secondary data used. How primary data were collected – survey, experiment, observation. Multiple techniques used – triangulation.

What is case study research.?three characteristics?

What is case study research?

Study of an issue explored through one or more cases within a bounded system over time, through detailed, in-depth data collection involving multiple sources of information

it as a methodology, a type of design in qualitative research, or an object of study, as well as a product of the inquiry.

Espouses both quantitative and qualitative approaches to case study development and discusses explanatory, exploratory, and descriptive qualitative case studies.

Communication analysis in research method?

Communication analysis

Analyzing the content of text.

Content refers to words, meanings, pictures, symbols, ideas, themes, messages.

Text is anything written, visual, or spoken

Books, newspapers, advertisements, speeches, official documents, photographs, films, articles of clothing, works of art.

Brief note on sampling unit.?

That element or set of elements considered for selection in some stage of sampling.

Sampling can be single stage or multistage. Simple or complex.

In single stage, sampling units are the same as elements.

In multistage, different levels of sampling units may be employed. Sampling of Mohallahs, the of households, and then adults. Primary, secondary, final.

What is grounded theory?

What is grounded theory?

Grounded Theory is an inductive methodology. It is a systematic methodology in the social sciences involving the construction of theory through the analysis of data.

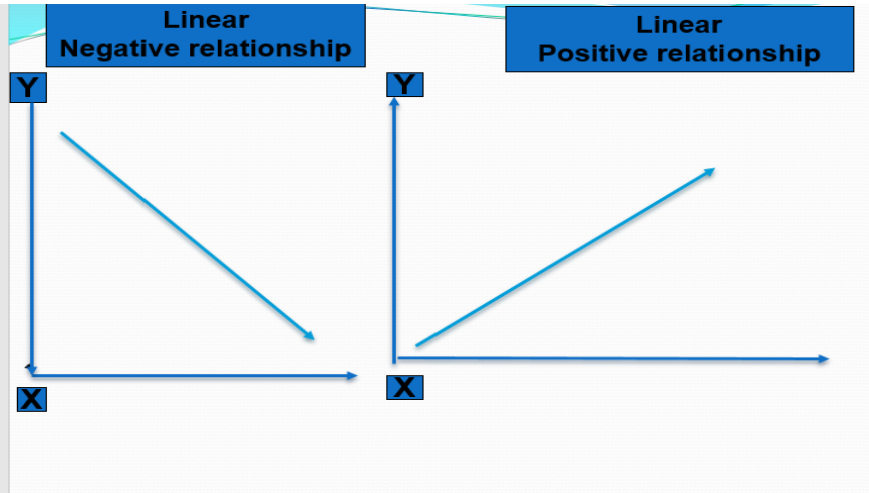

Ethnography and ethno-methodology?

Ethnography and Ethno-methodology

Ethno means people distinct by their culture. Graphy refers to description. Understanding the culture of people.

Methodology: how people create reality as well as its interpretation. Meanings attached to a reality.

Linear negative and linear positive?

Purposive sampling.

Purposive Sampling

Researcher lays down the criteria for the subjects.

Also called as *judgmental or expert opinion sample*. Selection depends upon the judgment of selector.

Characteristics of scientific method?

1. Empirical 2. Verifiable 3. Cumulative4. Deterministic 5. Ethical and ideological neutrality

6. Statistical generalization 7. Rationalism

Define double blind experiment?

Double blind experiment: to control experimenter expectancy. Both the subjects and experimenters are blind to details of experiment.

The double blind experiment is designed to control EE. Both the subjects and those in contact with them are blind to details of the experiment.

Three types of control?

Three types of controls

Manipulation: control over stimulus/treatment.

Holding conditions constant i.e. control over the environment (the confounding factors).

Control over the composition of groups – balancing. Find out the way that individual differences do not confound the X variable under investigation. Randomization is the answer .

How to locate research report?

Locate Research Reports:

Articles in scholarly journals.

Locating the relevant articles is difficult.

Many academic field have “abstracts” or “indexes” for scholarly literature.

Look in reference section of library

Also available on computer.

Validity in experiment?

Validity in Experiments

Validity refers to confidence in cause and effect relationship.

Internal validity is high in Laboratory experiments.

External validity (generalizability) is not sure.

Exploratory and descriptive research?also their goals?

a. Exploratory Research:

▪ Initial research conducted to clarify and define the nature of the problem. Exploring a new topic.

▪ Specifically, there could be number of goals of exploratory research.

Goals of Exploratory Research:

▪ Become familiar with the topic. Develop well grounded picture of the situation.

▪ Develop tentative theories.

▪ Determine the feasibility of study.

▪ Formulate questions and refine issues for more systematic inquiry.

▪ Develop techniques and a sense of direction for future research

b. Descriptive Research:

Research designed to describe characteristics of the phenomenon understudy.

Helps in diagnostic analysis

Goals of Descriptive Research:

▪ Describe the situation/characteristics. Provide an accurate profile of a group.

▪ Give a verbal or numerical picture (%).

▪ Present basic background information.

▪ Create a set of categories or classify.

▪ Clarify sequence, set of stages.

▪ Focus on 'who', 'what', 'when', 'where' and 'how' but not on 'why'.

Rights of participants in study?

Rights of the participants

No physical harm, discomfort, pain, embarrassment, or loss of privacy.

Follow three guidelines:

1. Explain study benefits.

2. Explain respondent rights and protections.

3. Obtain informed consent.

Define field research?

Observation can be participant or non-participant.

In participant observation the researcher directly observes and participates in small scale social settings in the present time.

Also referred to as field research, ethnography, or anthropological study.

Duties of field researchers?

A field researcher does the following:

1.Observes ordinary events and everyday activities as they happen in natural settings, in addition to unusual occurrences.

2. Becomes directly involved with people being studied and personally experiences the process of daily life in the field setting.

3. Acquires an insider's point of view while maintaining the analytic perspective or distance of an outsider.

4. Uses a variety of techniques and social skills in a flexible manner as the situation demands.

5. Produces data in the form of extensive, written notes, as well as diagrams, maps, pictures to provide very detailed descriptions.

6. Sees events holistically (as a whole unit) and individually in their social context.

7. Understands and develops empathy for members in a field setting, and does not just record 'cold' objective facts.

8. Notices both explicit (recognized, conscious, spoken) and tacit (less recognized, implicit, unspoken) aspects of culture.

9. Observes ongoing social processes without upsetting, or imposing an outside point of view.

10. Copes with high levels of personal stress, uncertainty, ethical dilemmas, and ambiguity.

Importance of theory in science.

Role of Theory

Theory as orientation. Framework. Phenomenon may be studied in different ways. Narrows the range of facts to be studied. Study of football.

Theory as conceptualization and classification. Provides concepts.

Theory in summarizing role. Empirical generalizations.

Theory predicts facts. Extrapolation.

Theory points gaps in knowledge.

Limitation of trivariate table?

Difficult to interpret if control variable has more than four categories.

Total number of cases may be limiting factor because cases are divided into cells in partials. Thinning out of data. On average 5 cases per cell recommended.

Three ways of gaining research literature?

Computer: on line systems.

Scholarly journals.

Books – containing reports of original research, or collection of research articles. READERS or Book of Readings.

Dissertations.

Government documents.

Policy reports and presented papers.

Bibliographic indexes.

Reference and bibliography

A bibliography is the listing of the works that are relevant to the topic of research interest arranged in alphabetical order of the last names of authors.

A reference list is a subset of the bibliography, which includes details of all the citations used in the literature survey and elsewhere in the report, arranged again, in the alphabetical order of the last names of authors.

Types of phenomenology?

Types of Phenomenology

Two approaches to phenomenology are highlighted in this discussion: Hermeneutic phenomenology

Empirical, transcendental, or psychological phenomenology .

Hermeneutical phenomenology describes research as oriented toward lived experience (phenomenology and interpreting the "texts" of life (hermeneutics) as available in blogs and tweets etc.

Transcendental or psychological phenomenology is focused less on the interpretations of the researcher and more on a description of the experiences of participants.

Sampling bias?

Sampling bias. Only well educated people will write. Views of poorly educated people are not there.

Sources of concept sampling?

Sources of Concepts:

- We create concepts from personal experience. Mass, speed, family.
- We borrow from other disciplines.
- We develop a specialized jargon or terminology for a particular subject.

Several ways to protect confidentiality?

Several ways to protect the confidentiality

Obtaining signed nondisclosure documents.

Restricting access to respondent's identification

Revealing respondent information only with written consent.

Restricting access to data instruments where the respondent is identified.

Nondisclosure of data subsets.

Criteria of sample design?

Depends upon a number of criteria like:

1. Degree of accuracy.
2. Resources.
3. Advance knowledge of population.
4. National vs. local project. Geographic proximity of population.
5. Need for statistical analysis. Projecting beyond the sample or the sample only.

Main points of conceptual model?

Conceptual Model

Researcher elaborates the relationship among the variables.

Explains the logic underlying these relationships.

Describes the nature and direction of the relationships
