Lesson 05

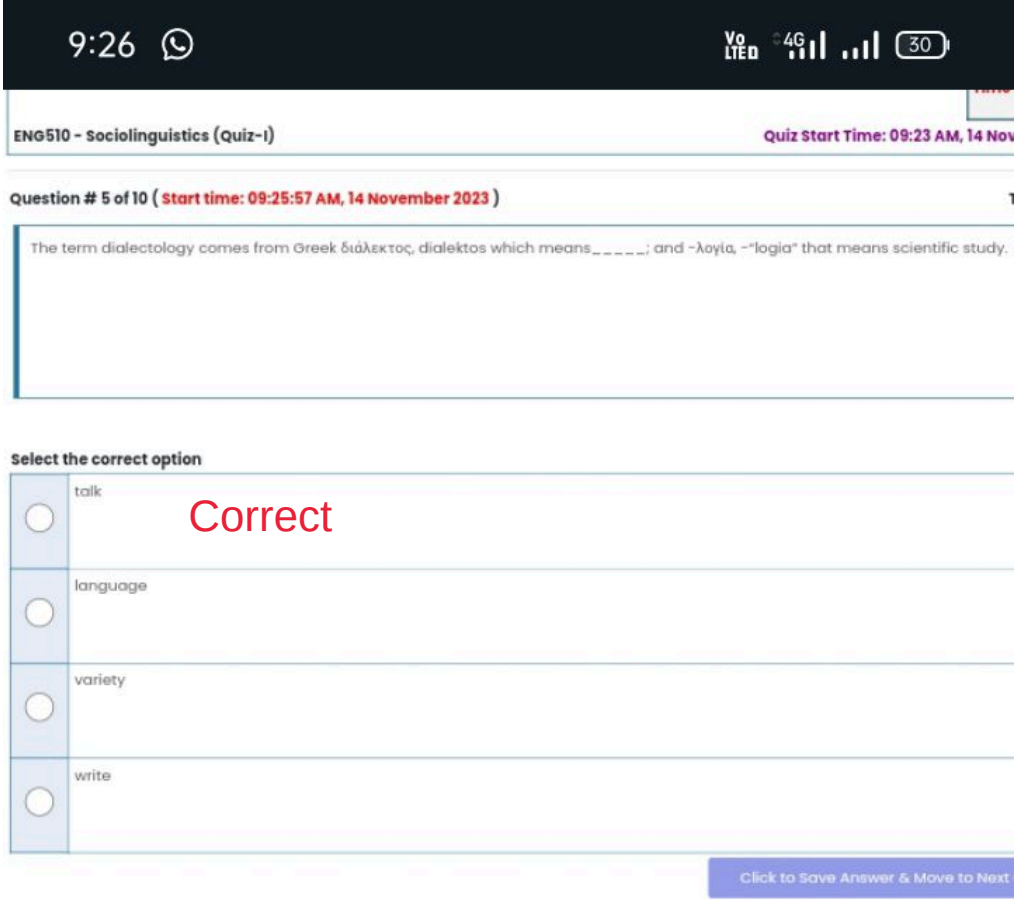

LANGUAGE CONTACT AND VARIATION- I

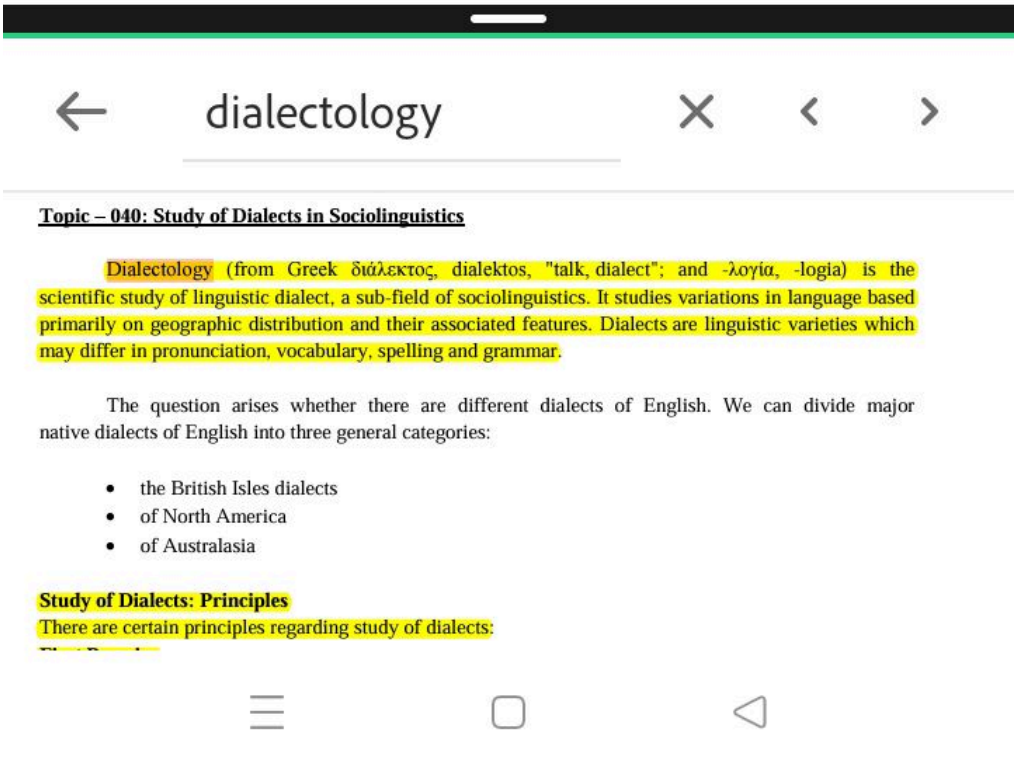

Topic- 021: Sociolinguistic Constraints on Language Contact

We need to consider certain concepts: What is language contact? How does it happen? What are the consequences? As a general observation and experience we know that different groups of speakers using different languages come into contact. Language contact occurs when speakers of two or more languages or varieties interact and influence each other. The study of language contact is called contact linguistics. Sometimes unrelated languages that are typical of creole language formation come in contact. We also look at a variable spreading due to contact between different varieties of English. A new variant is introduced into a relatively stable and elaborate system.

The question that arises is whether variation is free or structured. Before the 1960s, the general feeling in Western linguistics was that some of the variation observed in language was "free" and "unconstrained". There are some constraints on the outcomes of language contact other than the principle of localisation. A constraint relates to the aspect of space. Another constraint is concerned with speaker's attitudes. Another constraint is of social factors. Yet another is social rigidity in which an innovation is being introduced. So, language contact occurs in a variety of phenomena, including language convergence, borrowing and relexification. The most common products are pidgins, creoles, code-switching, and mixed languages. So, language contact is not as free as it seems to be.

Outcomes of language contact

Topic – 040: Study of Dialects in Sociolinguistics

Dialectology (from Greek διάλεκτος, dialektos, "talk, dialect"; and -λογία, -logia) is the scientific study of linguistic dialect, a sub-field of sociolinguistics. It studies variations in language based primarily on geographic distribution and their associated features. Dialects are linguistic varieties which may differ in pronunciation, vocabulary, spelling and grammar.

The question arises whether there are different dialects of English. We can divide major native dialects of English into three general categories:

- the British Isles dialects
- of North America
- of Australasia

Study of Dialects: Principles

There are certain principles regarding study of dialects:

- morphological
- phonological
- physiological

Click to Save

trudgill exa

As a rule, sociolinguists would like the principles accounting for language variation and change to be as general as possible. It's particularly heartening if principles which apply in other areas of the social sciences apply to some extent in the domain of language use. Peter Trudgill was the sociolinguist who first saw the potential for applying the gravity model to the study of sound changes. Trudgill examined the spread of innovative phonological variants in Swedish and the spread of uvular 'r' in Europe. He argued that these variables were better explained in terms of population gravity than by wave model.

Topic – 024: Access to the Codes

The British sociolinguist Robert Le Page is famous for his studies of variation in creole speaking communities in the Caribbean and Britain. Le Page was intrigued by the number of different styles or registers that were often in play in these communities. Sometimes individuals seemed to have quite

Question # 3 of 10 (Start time: 09:24:34 AM, 14 November 2023)

The speech habits peculiar to a particular person is known as a/an ____.

Select the correct option

- ○ language
- ○ idiolect ✓
- ○ isogloss
- ○ dialect

peculiar

Topic – 038: Idiolects

An idiolect is the speech habits peculiar to a particular person. Stanford Encyclopedia of Philosophy: An idiolect is a language, the linguistic (i. e. syntactic, phonological, referential, etc.) properties of which can be exhaustively specified in terms of the intrinsic properties of some single individual, the person whose idiolect it is. The force of "intrinsic" is to exclude essential reference to features of the person's wider environment, and in particular to their linguistic community.

The unique usage encompasses vocabulary, grammar, and pronunciation. Idiolect as the variety of language unique to an individual differs from a dialect that is a common set of linguistic characteristics shared among some group of people.

Criticism on the Idea of Idiolect:

- Idiolects in this sense do not exist.
- The notion is useless.
- It is incoherent.

Question # 1 of 10 (Start time: 09:23:18 AM, 14 November 2023)

Distinction between `language' and 'dialect' is an influence of _____culture.

Select the correct option

- Greek
- European
- Western
- Roman

distinction between

Topic- 031: Difference Between a Language and a Dialect

It is a part of our culture to make a distinction between 'languages' and 'dialects'. In fact, we make two separate, distinctions using these terms, and we may draw conclusions from this fact about our culturally inherited view of language. We may contrast our culture in this respect with others where no distinction is made. For example, Haugen (1966) states that this was the case in England until the term dialect was borrowed in the Renaissance, as a learned word from Greek.

In fact distinction between `language' and 'dialect' is an influence of Greek culture. There were a number of clearly distinct written varieties in use in Classical Greece, each associated with a different area and used for a different kind of literature. Thus the meanings of the Greek terms which were translated as 'language' and 'dialect' were in fact quite different from the meanings these words have in English now. Their equivalents in French are perhaps more similar, since the French word 'dialecte' refers only to regional varieties which are written and have a literature in contrast with regional varieties

9:20

vulms.vu.edu.pk

Which of the following variations deals with language change over time?

over time

and typological comparison. This can involve a close investigation of specific grammatical phenomena in various languages/dialects, with a view to identifying the precise details of where they differ or are the same may.

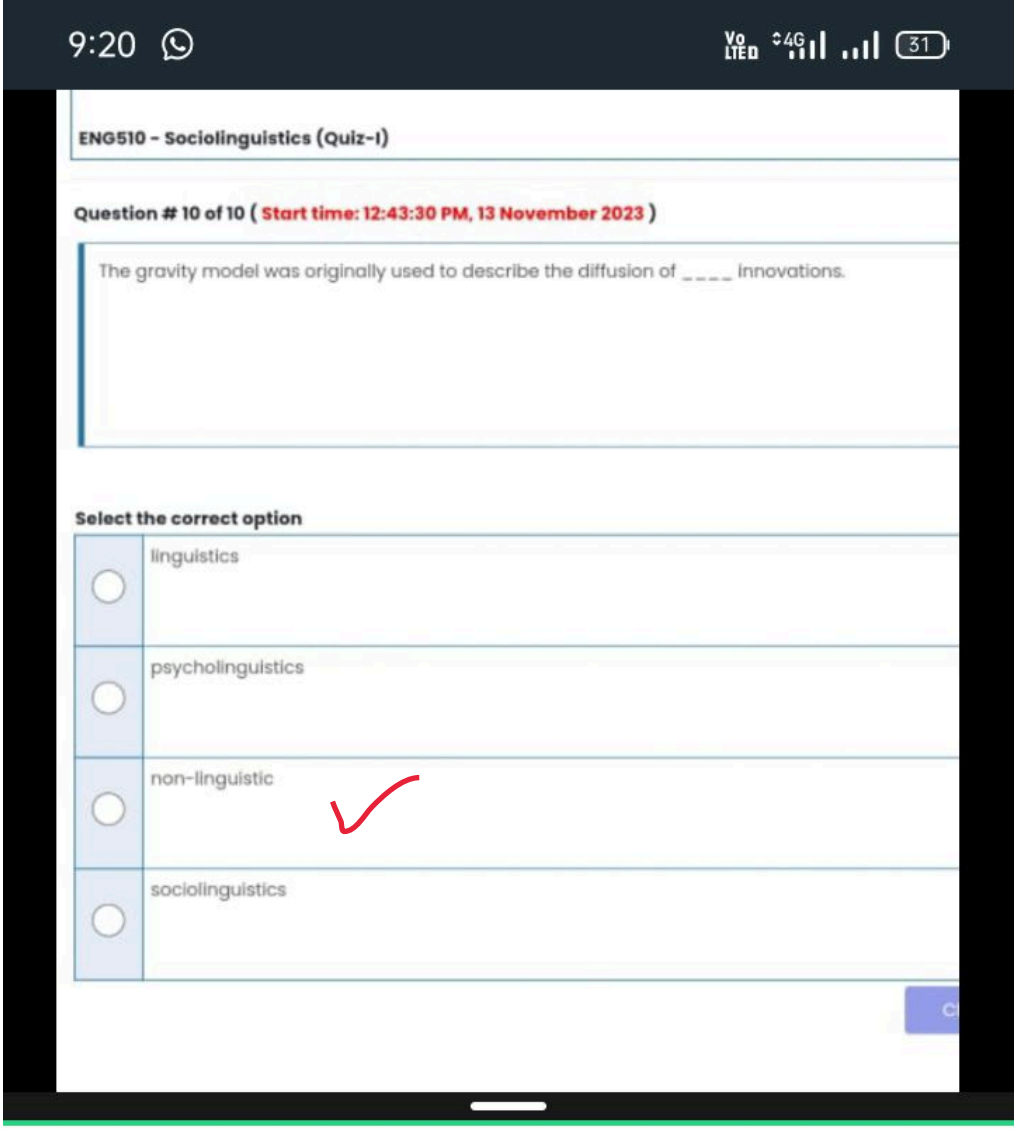

Now if you from a synchronic perspective about varieties of English and worldwide spread of English, the synchronic study of English may involve spelling differences, pronunciation differences, syntactic varieties, and above all vocabulary choices.

Topic – 029: Diachronic Variation

Diachronic linguistics is one of the two main temporal dimensions of language study identified by a Swiss linguist Ferdinand de Saussure. Diachronic variation deals with language change over time. Principal concerns of diachronic linguistics include: to describe and account for observed changes in particular languages.

The term diachronic consists of 'dia' that means 'throughout'; and 'chron' that means 'time'. Diachronic linguistics is the study of language through different periods in history. It maps the shifts and fractures and mutations of languages over the centuries. In gross outline, it is similar to evolutionary biology, which maps the shifts and transformations of rocks. For example, tracing the development of English from the Old English period to the twentieth century is a diachronic study.

The question arises what is the significance of diachronic linguistics and why it is important. The simple answer is that there are patterns which simply cannot be discerned without looking at a language at

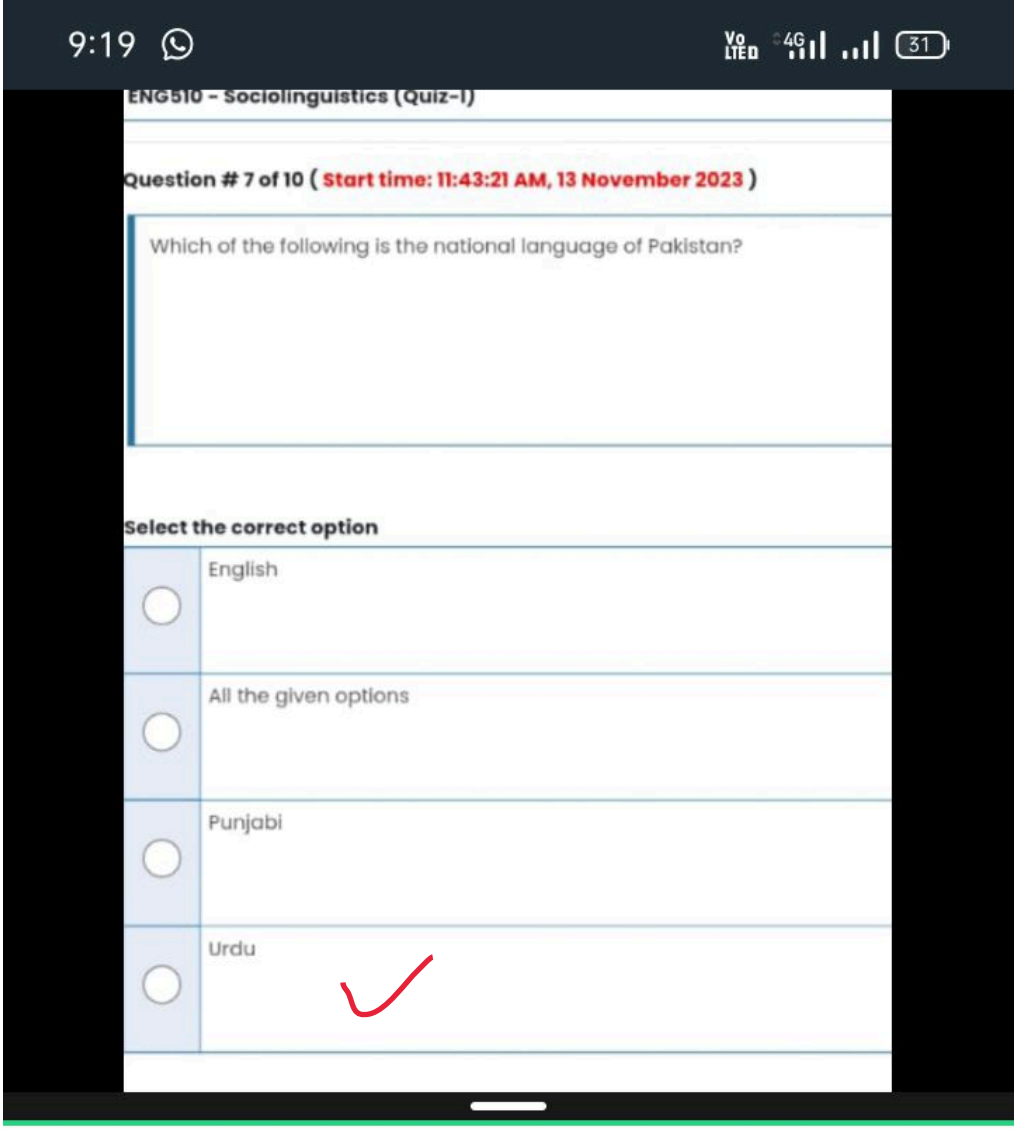

gravity model

Topic – 023: Spatial Diffusion by Gravity

Model of the diffusion of innovations was introduced by Peter Trudgill to sociolinguistics. Social innovations (including linguistic innovations) have been observed to 'hop' between large population centres in a (spatially) discontinuous manner. At its simplest, the gravity model predicts that the larger the city/town, the sooner an innovation is likely to show up there,i.e., the 'gravitational force' is provided by the weight of numbers of people.

The gravity model was originally used to describe the diffusion of non-linguistic innovations. Sociologists and economists had observed that innovations, such as the adoption of new brands of cars or the use of new types of seed among farmers, often moved irregularly across physical space. They found that they jumped from cities with the largest populations gradually moved to smaller cities and towns, and finally took hold in the smaller towns or villages. This meant that even if a small town was close to the starting point of an innovation, the people living there might be relatively late in adopting it. So the 'gravity' that the model refers to is the pull or attraction exerted by the sheer number of people in a given locale. You can get a rough idea of the gravity effects of major population bases if we consider the spread of a technological innovation. Take an example of the spread of Hummer vehicles in Pennsylvania. One way to chart their spread is to look for listings of Hummer dealerships in the phone book. The first dealerships opened in Philadelphia and Pittsburgh, the two largest cities in Pennsylvania. Philadelphia is in the far east of the state and Pittsburgh is in the far west of the state. The next opened just outside of

national

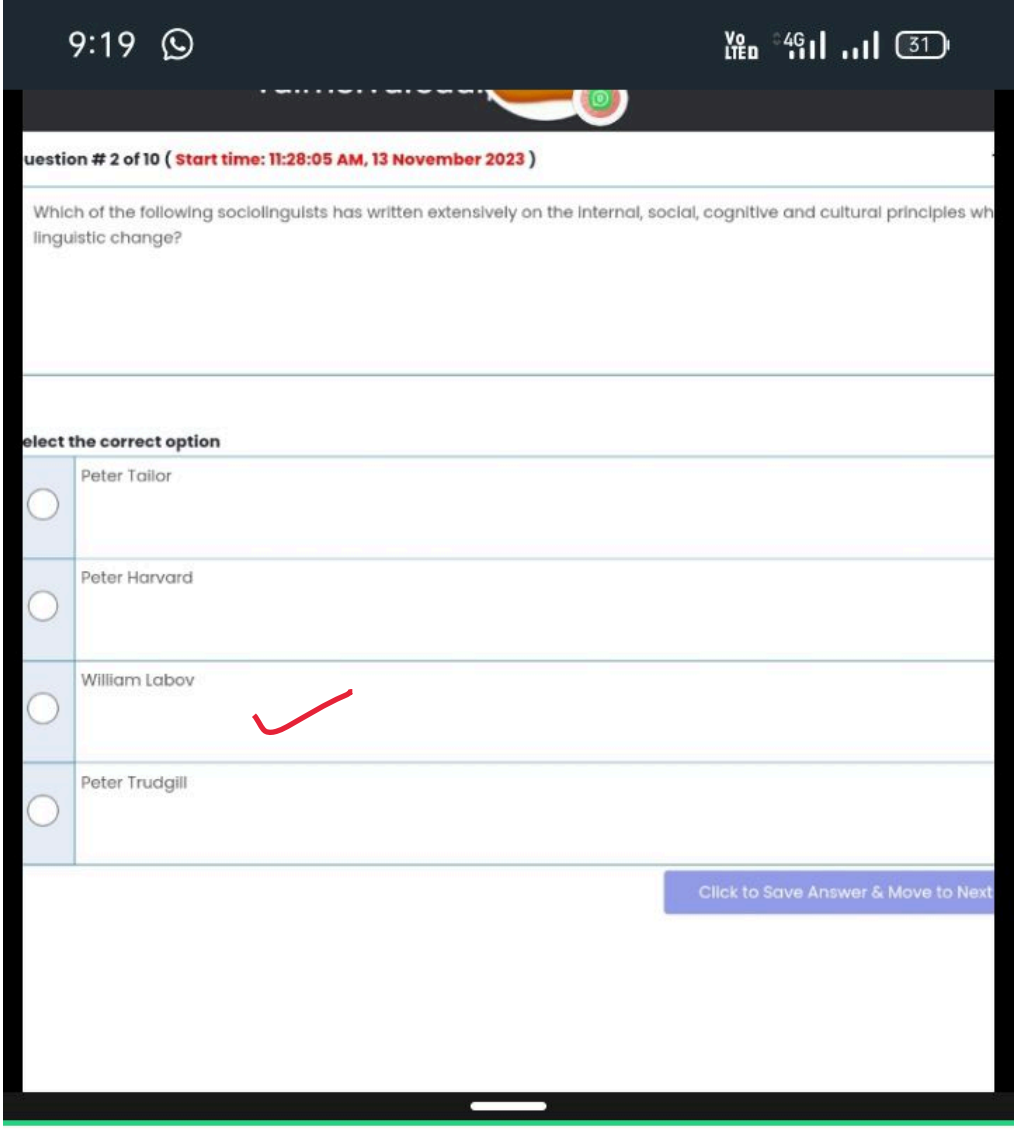

This makes a real situation. It is a description of a real situation found in many villages in the northern part of the African country of Cameroon, for example in Galim.

Topic –044: Language and Dialects in Pakistan

Pakistan is an amalgamation of heterogeneous groups with widely different linguistic characteristics. A large number of languages are spoken, for instance, official languages: Urdu and English. Urdu is the official language, though it is not the first language of the majority of the population. Apart from Urdu and English, which is limited to a small proportion of the population no language is commonly understood.

The national language Urdu has a number of handicaps. The regional languages - Punjabi, Baluchi, Sindhi and Pashto, though rich in literature- rely heavily on oral tradition and moreover, lack a unitary system of speech form (Mansoor, 1993). Apart from Urdu and English, which is limited to a small proportion of the population no language is commonly understood. The national language Urdu is not indigenous and suffers from a number of handicaps. To complicate the situation even more, all speakers

©Copyright Virtual University of Pakistan

social, cognitive

Since similar words may undergo the same change at different times (case of can and may, which turned into modals at different speed) we need to conclude that even if we knew the starting date and direction of a change, we could not know in advance how long it would take (Bauer, 1994). Furthermore, it is difficult to determine whether ongoing variation in frequency distributions is the beginning of a full-fledged linguistic change or simply "an insignificant, temporary 'blip'" (Graddol, 1997).

Another problem is the fact that even trends that seem to develop steadily may change for reasons that are inconceivable at the moment of making a prediction. In the very first place, there are a number of elaborate discussions of how and why languages change. For an overview of central approaches addressing the topic on a general level (Schneider, 1997).

Labov (1994) has written extensively on the internal, social, cognitive and cultural principles which drive linguistic change. As for the generally applying principles, one which is widely accepted in the study of linguistic change is the so-called "Uniformitarian Axiom". It states that "[n]othing (no event, sequence of events, a constellation of properties, general law) that cannot for some good reason be the case in the present was ever true in the past" (Lass, 1980). For predictions, the uniformitarian principle is simply extrapolated to the future, which means that any general principles that hold true now are expected to apply to future linguistic stages.

If linguistic change worked according to lay-people's perspective, who usually assume "that what is happening now will simply continue" (Graddol, 1997,p. 18), this could be graphed as a linear pattern. However, a common observation is that this is not how linguistic innovations spread. Instead, linguistic change is more aptly represented graphically as an exponential S-shaped growth curve which has, for instance, been observed in the historical separation of modal verbs from ordinary verbs or in the development of the use of the progressive (Aitchison, 1991).

Question # 9 of 10 (Start time: 12:43:01 PM, 13 November 2023)

Which of the following languages is used in district Hazara?

Select the correct option

- Sindhi
- Punjabi
- Hindko
- Pashto

hazara

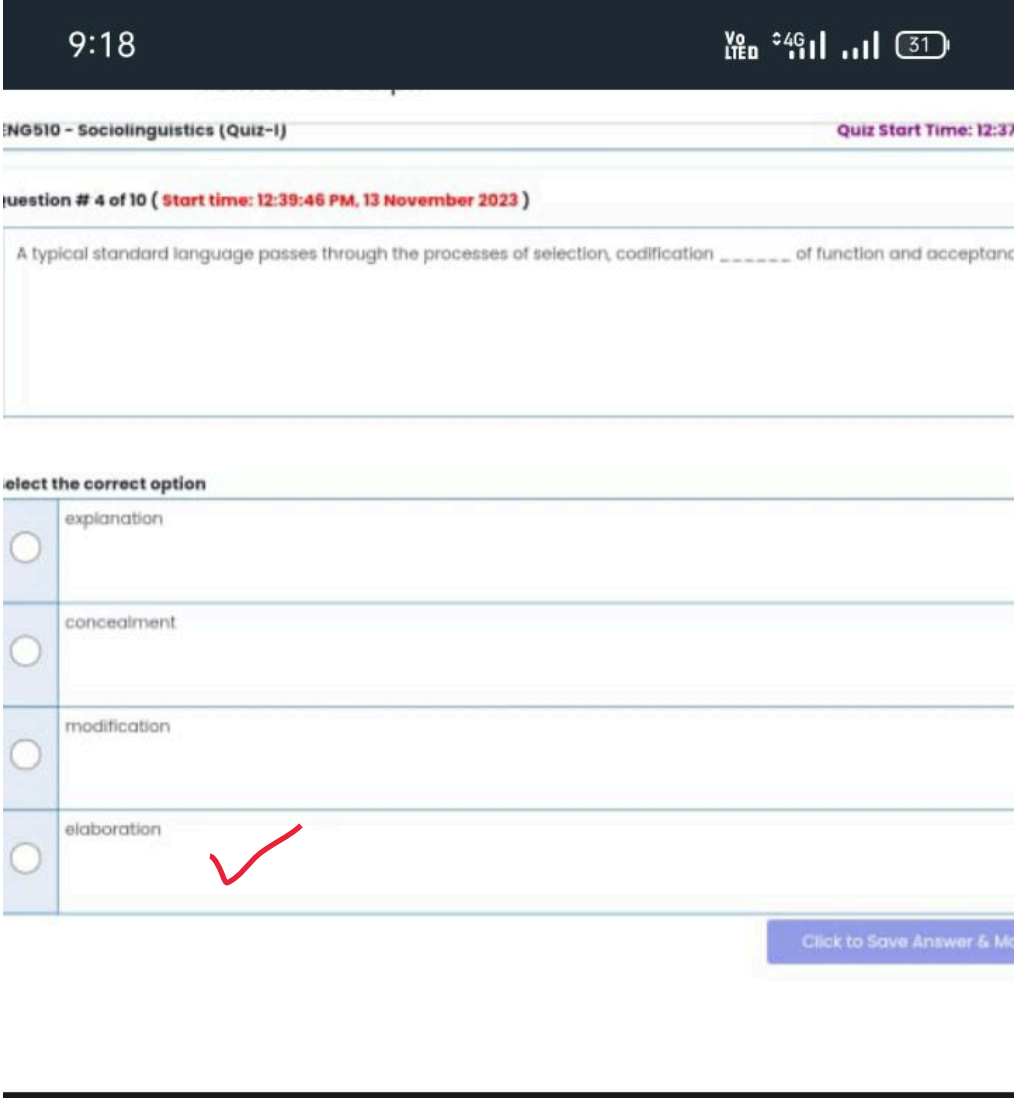

that is not less than 70, are spoken in this region (Mansoor, 1993).

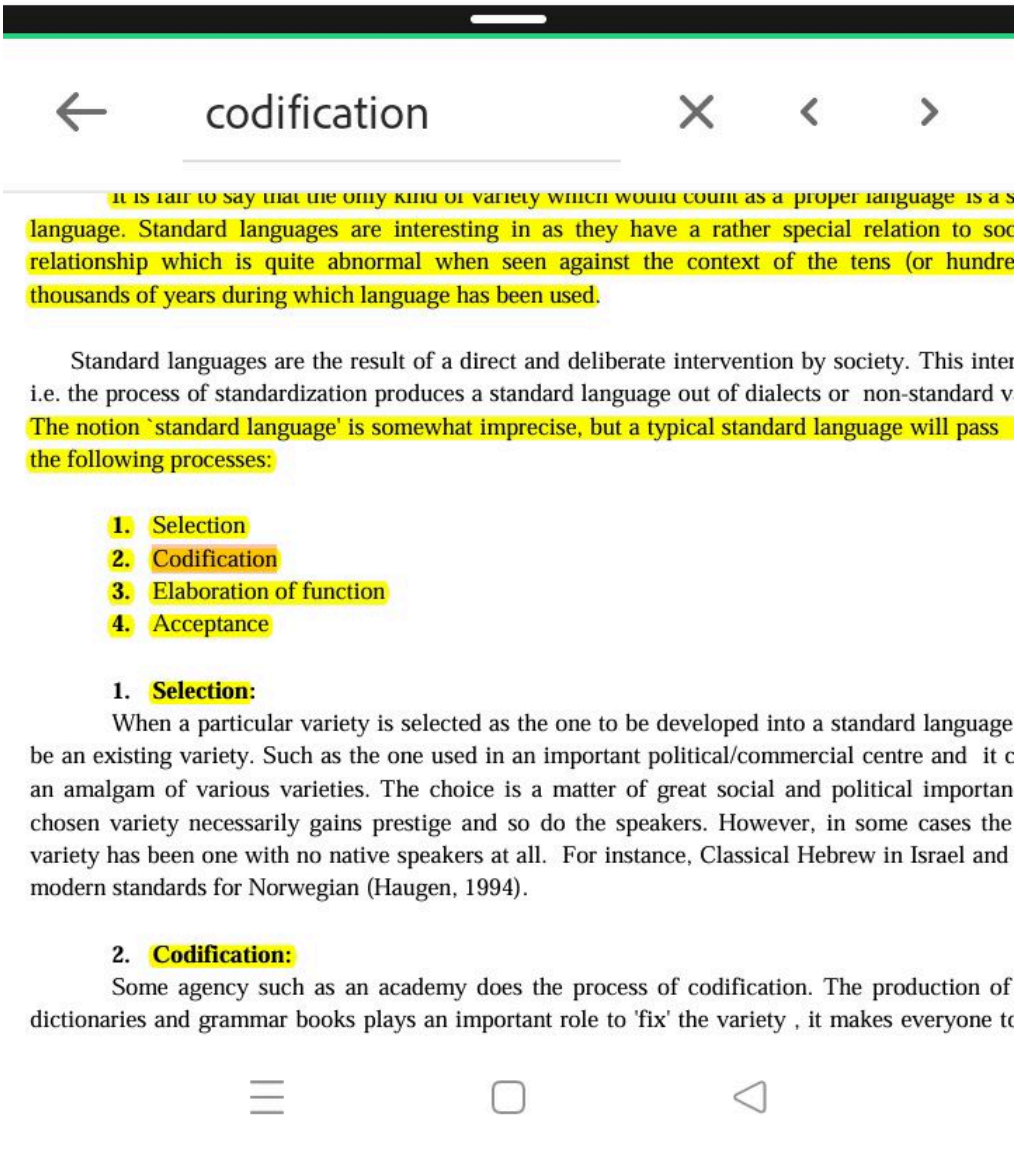

According to Rafique (1993-94), these languages heavily lean upon Persian and Arabic. Balochi, due to the area's geographical affinity to Iran, is more akin to the Persian than any other language. Speakers of Punjabi make up 56.1 % of the population. 48 % speak it as a first language. The 'soft' boundaries of Punjabi and Urdu, and the element of mutual intelligibility between the two languages have been instrumental in the spread of Urdu, Sindhi, Baluchi, Pashto and other regional languages. To Saigol (1993), Sindhis makeup 26.6%, Baluchis 5.1% and Pathans 13.1%of the population, corresponding to the four provinces of the country.

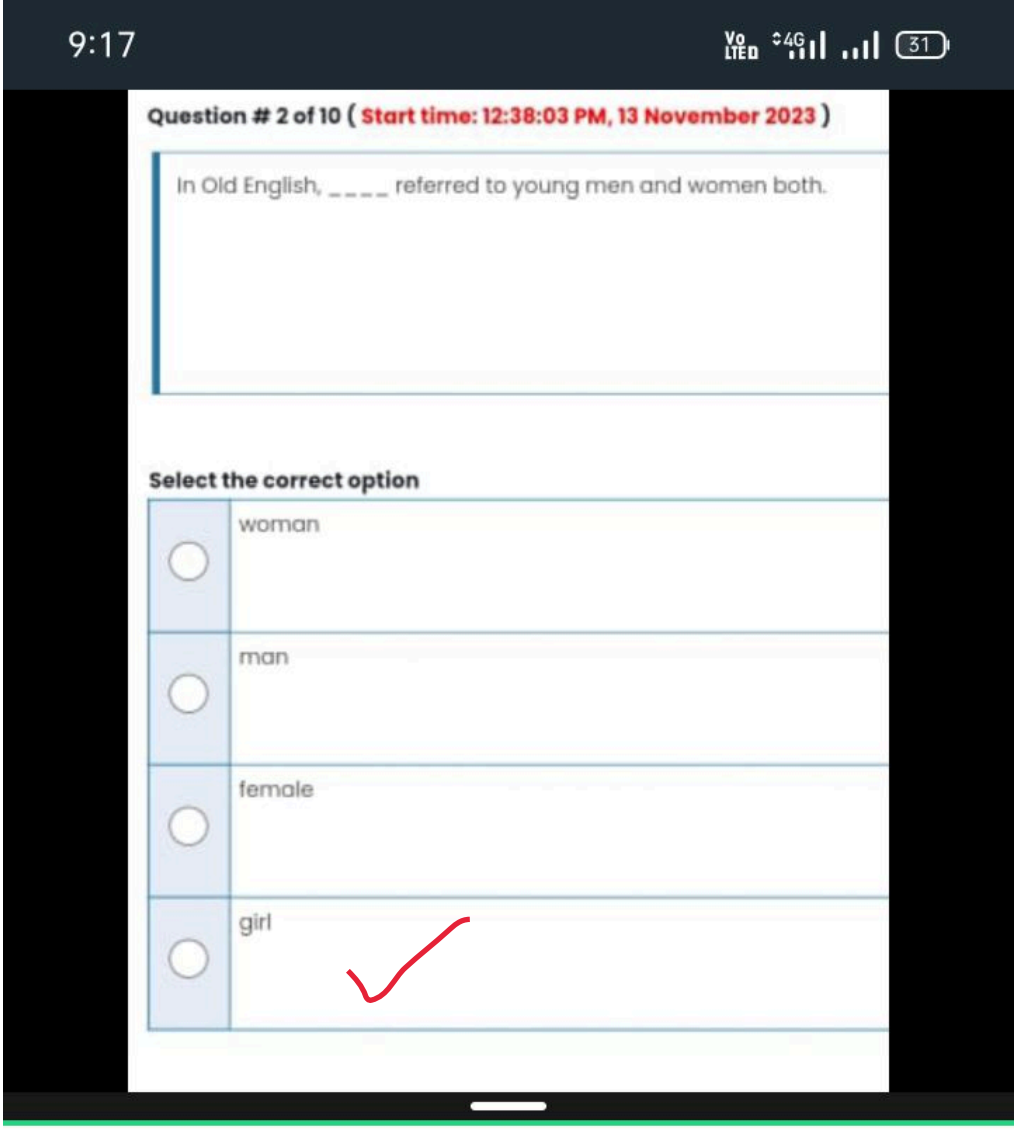

Sindhi is spoken in rural Sindh whereas Urdu in urban Sindh, and Gujrati in influential minorities. In N.W.F.P. Pashto is the language of majority of the population, though one district Hazara uses Hindko. Baluchistan has multiple languages: it has Baluchi, Pashto, Brohi and a sprinkling of Sraiki and Punjabi.

Topic – 045: Language in Society

Language and social interaction have a reciprocal relationship. Language shapes social interactions and social interactions shape language. Anthropological linguistics looks at: Language in specific culture and how it is affected. Sociolinguistics is the study of the connection between language and society and the way people use language in different social situations. When we say language is a social-cultural-geographical phenomenon, what does it mean? We also need to think about how does society affect language? It is in society that man acquires and uses language. Kinds of problems in this relationship include communities which develop a standard language, and the reactions of minority adds to this (as in Belgium, India, Pakistan or Wales); people have to be educated to linguistic level where they can cope with the demands of a variety of social situations. Communication exists between nations or groups using a different language. Problems are caused by linguistic change in response to social factors. The problems are caused or solved by bilingualism or multilingualism. Scope of sociolinguistics includes

codification
it is fair to say that the only kind of variety which would count as a proper language is a s
language. Standard languages are interesting in as they have a rather special relation to soc
relationship which is quite abnormal when seen against the context of the tens (or hundre
thousands of years during which language has been used.
Standard languages are the result of a direct and deliberate intervention by society. This inter
i.e. the process of standardization produces a standard language out of dialects or non-standard v
The notion `standard language' is somewhat imprecise, but a typical standard language will pass
the following processes:
1. Selection
2. Codification
3. Elaboration of function
4. Acceptance
1. Selection:
When a particular variety is selected as the one to be developed into a standard language
be an existing variety. Such as the one used in an important political/commercial centre and it c
an amalgam of various varieties. The choice is a matter of great social and political importan
chosen variety necessarily gains prestige and so do the speakers. However, in some cases the
variety has been one with no native speakers at all. For instance, Classical Hebrew in Israel and
modern standards for Norwegian (Haugen, 1994).
2. Codification:
Some agency such as an academy does the process of codification. The production of
dictionaries and grammar books plays an important role to 'fix' the variety , it makes everyone t

young men

- Now look every man to himself.
- Modern English, and example from Modern English is: Now it's for every man t himself.' (Roberts, 2007,p.59)

4. Semantic:

- In diachronic linguistics semantic change is a change in one of the meanings of a wo
- Every word has a variety of senses and connotations, which can be added, ren altered over time.

Some Examples:

In Old English, "girl" referred to young men and women both.

Awful— originally meant "inspiring wonder (or fear)". Used originally as a shortening of awe", in contemporary usage the word usually has a negative meaning.

Silly (Old English sēlig 'happy, fortuitous') had by the 15th century the sense of 'des pity' and then developed to 'ignorant, feeble-minded' and later 'foolish'.

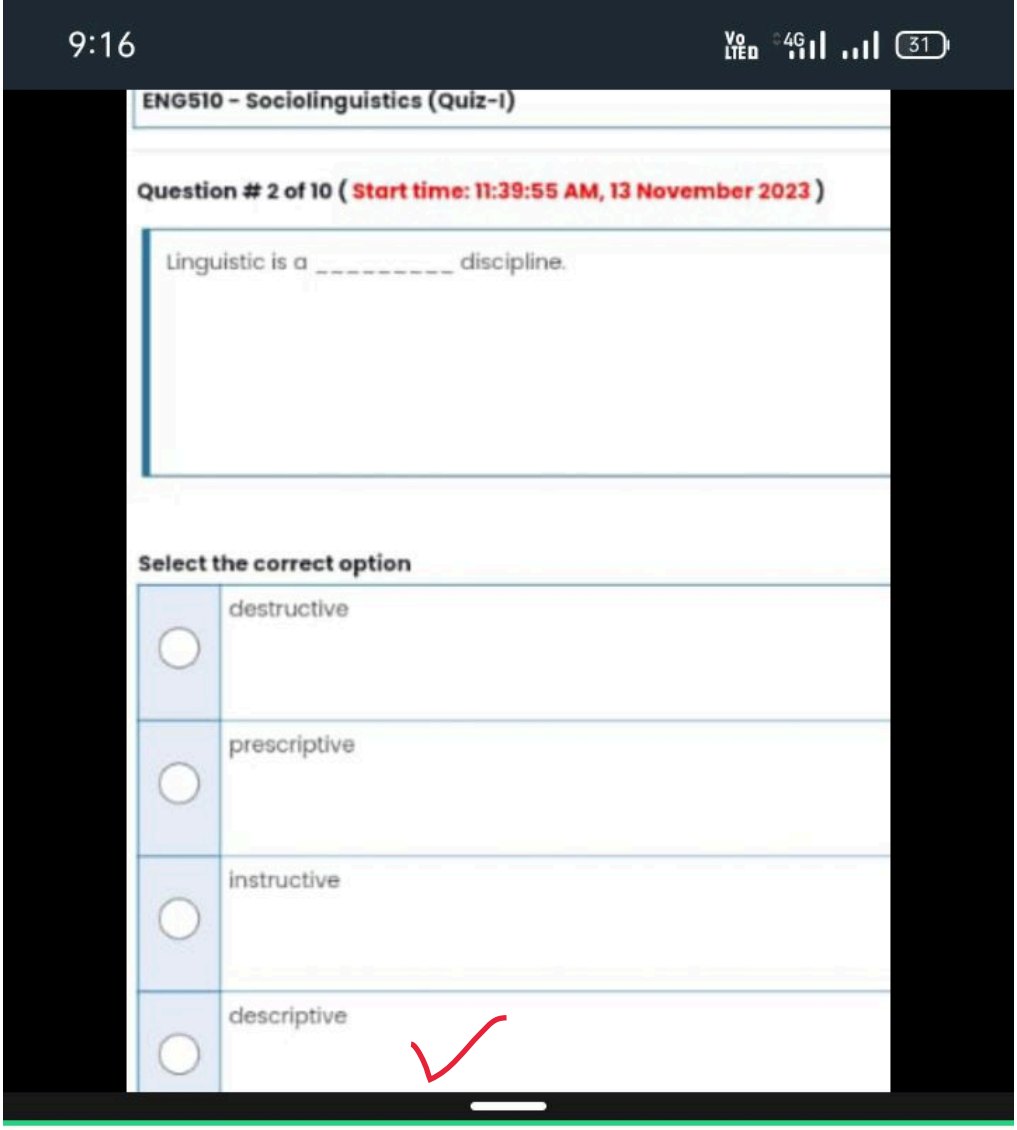

Cultural diachronic study of English may involve, spelling differences, pronunciation di ,diachronic varieties and vocabulary choices.

Study of Diachronic Varieties and Scope:

Follwing is the scope of studying diachronic varieties:

- To reconstruct the pre-history of languages and determine their relatedness and grou into language families
- To develop general theories about how and why language changes
- To describe the history of communities
- To study the history of words, i.e. Etymology

Topic – 045: Language in Society

Language and social interaction have a reciprocal relationship. Language shapes social interactions and social interactions shape language. Anthropological linguistics looks at: Language in specific culture and how it is affected. Sociolinguistics is the study of the connection between language and society and the way people use language in different social situations. When we say language is a social-cultural-geographical phenomenon, what does it mean? We also need to think about how does society affect language? It is in society that man acquires and uses language. Kinds of problems in this relationship include communities which develop a standard language, and the reactions of minority adds to this (as in Belgium, India, Pakistan or Wales); people have to be educated to linguistic level where they can cope with the demands of a variety of social situations. Communication exists between nations or groups using a different language. Problems are caused by linguistic change in response to social factors. The problems are caused or solved by bilingualism or multilingualism. Scope of sociolinguistics includes the interaction of language and various sociologically definable variables such as social class, specific social situation, status and roles of speakers etc.

Language can vary, not only from one individual to the next, but also from one sub-section of speech-community (family, village, town, region) to another. People of different age, sex, social classes, occupations, or cultural groups in the same community will show variations in their speech. Thus, language varies in geographical and social space.

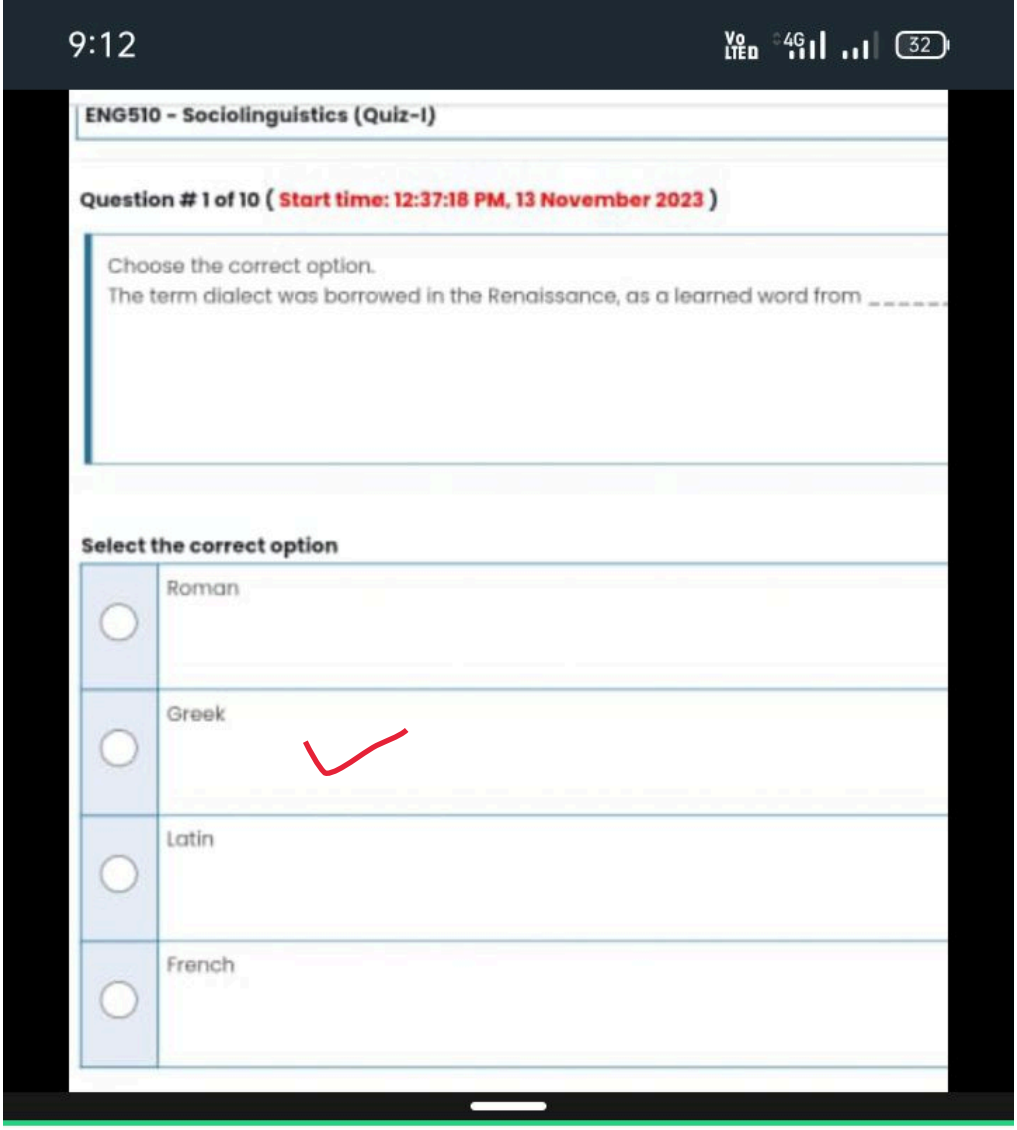

Linguists generally recognize two major language families in Papua New Guinea comprising between 700 and 800 languages, Austronesian and non-Austronesian (or Papuan). However, in Papua New Guinea there is no one-to-one mapping between village names, groups, and language names. Sometimes, up to four local names apply to what a district officer decided to call 'one' village, and some names are common to three or four sites. In addition, many groups have no special names for their languages. The Sare people of the Sepik, for example, call their language Sare, but this means simply 'to speak or talk'.

Explanations for the Existence of Extreme Linguistic Fragmentation of New Guinea:

©Copyright Virtual University of Pakistan

First, 40,000 years of human habitation affords sufficient time-depth for natural processes of change and diversification to produce a multitude of languages. Secondly, the rugged nature of the terrain poses physical barriers to human social interaction. Thirdly, cultural attitudes play an important role in fostering and maintaining diversity. Diversity is cultivated in Melanesia as a badge of identification. Overall, a complicated situation where it is even difficult to draw lines between languages and dialects.

Lesson 07

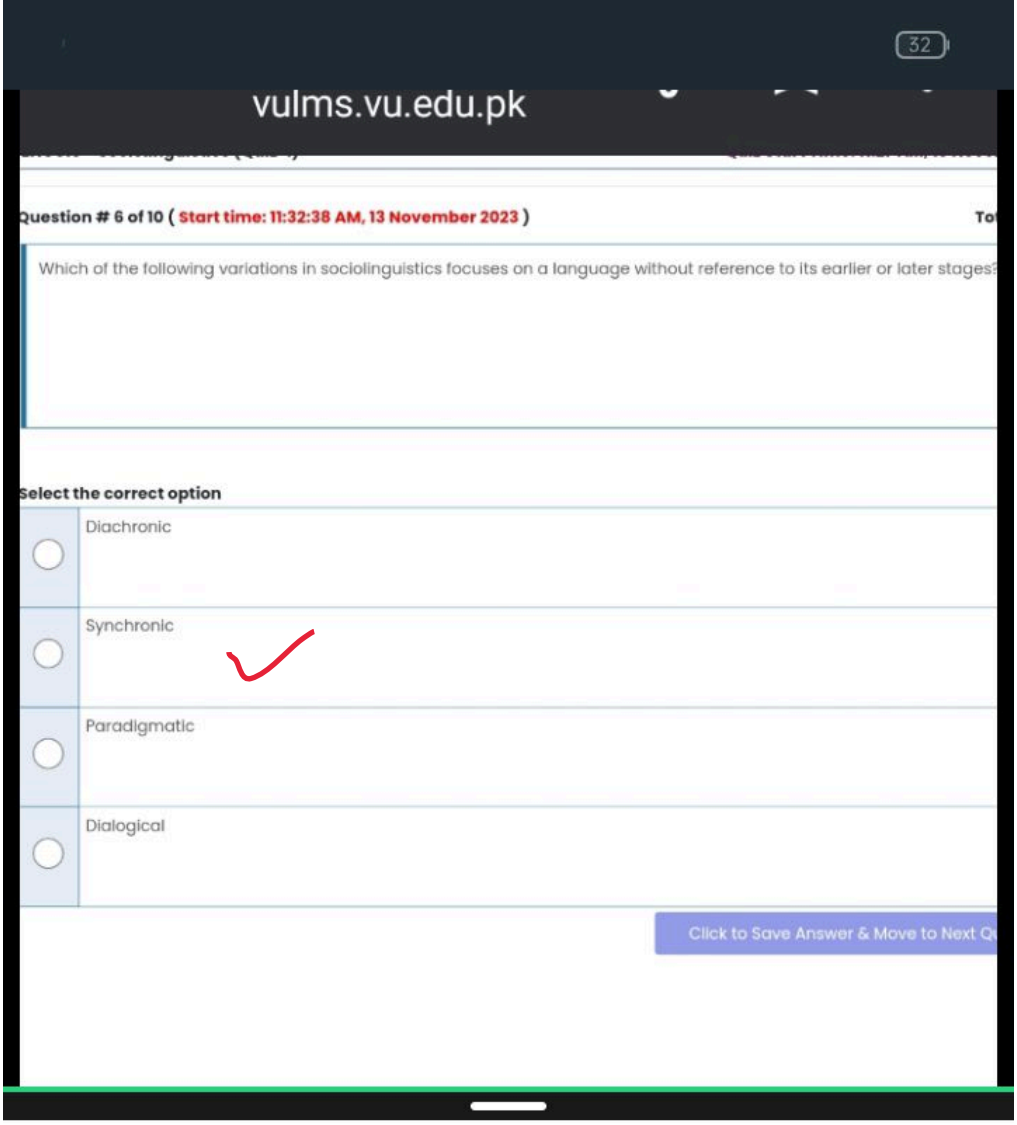

SOME CONCEPTS RELATED TO LANGUAGE VARIETIES

Topic- 031: Difference Between a Language and a Dialect

It is a part of our culture to make a distinction between 'languages' and 'dialects'. In fact, we make two separate, distinctions using these terms, and we may draw conclusions from this fact about our culturally inherited view of language. We may contrast our culture in this respect with others where no distinction is made. For example, Haugen (1966) states that this was the case in England until the term dialect was borrowed in the Renaissance, as a learned word from Greek.

In fact distinction between `language' and 'dialect' is an influence of Greek culture. There were a number of clearly distinct written varieties in use in Classical Greece, each associated with a different area and used for a different kind of literature. Thus the meanings of the Greek terms which were translated as 'language' and 'dialect' were in fact quite different from the meanings these words have in English now. Their equivalents in French are perhaps more similar, since the French word 'dialecte' refers only to regional varieties which are written and have a literature in contrast with regional varieties which are not written are called 'patois'.

There is nothing absolute about the distinction which English happens to make between 'languages' and 'dialects'. What then is the difference, for English speakers, between a language and a dialect? There are two separate ways of distinguishing them, and this ambiguity is a source of great confusion. Haugen (1966), argues that the reason for the ambiguity, and the resulting confusion, is precisely the fact that 'dialect' was borrowed from Greek, where the same ambiguity existed.Sometimes, there is a difference of size, because a language is larger than a dialect,a variety called a language contains more items than one called a dialect. In this sense we may refer to English as a language, containing the sum total of all the

without reference to

Topic – 028: Synchronic Variation

Synchronic linguistics is the study of a language at a given point in time. A synchronic approach (from Greek συν- "together" and χρόνος "time") considers a language at a moment in time without taking its history into account. Synchronic linguistics is contrasted with diachronic linguistics (or historical linguistics), the study of a language over a period of time.

One can approach all different aspects of language, such as grammar, syntax, semantics, phonology etc., from two different points of view. Synchronic variation in sociolinguistics focuses on the following:

- Explores the functioning of language at a single time point
- Without reference to earlier or later stages
- Explores varieties of dialects and their various features

"A synchronic study of language is a comparison of languages or dialects that are used within some defined spatial region and during the same period of time. As far as the scope of a synchronic study is concerned, a study in synchronic variation may focus on grammatical phenomena such as word order, negation, and features of clause-linking. Synchronic variation examines communities of speakers. It explores attitudes towards spatially co-existing varieties. There can be a cross-linguistic and typological comparison. This can involve a close investigation of specific grammatical phenomena in various languages/dialects, with a view to identifying the precise details of where they differ or are the same may.

Now if you from a synchronic perspective about varieties of English and worldwide spread of English, the synchronic study of English may involve spelling differences, pronunciation differences, syntactic varieties, and above all vocabulary choices.

diffusion of

Topic – 023: Spatial Diffusion by Gravity

Model of the diffusion of innovations was introduced by Peter Trudgill to sociolinguistics. Social innovations (including linguistic innovations) have been observed to 'hop' between large population centres in a (spatially) discontinuous manner. At its simplest, the gravity model predicts that the larger the city/town, the sooner an innovation is likely to show up there,i.e., the 'gravitational force' is provided by the weight of numbers of people.

The gravity model was originally used to describe the diffusion of non-linguistic innovations. Sociologists and economists had observed that innovations, such as the adoption of new brands of cars or the use of new types of seed among farmers, often moved irregularly across physical space. They found that they jumped from cities with the largest populations gradually moved to smaller cities and towns, and finally took hold in the smaller towns or villages. This meant that even if a small town was close to the starting point of an innovation, the people living there might be relatively late in adopting it. So the 'gravity' that the model refers to is the pull or attraction exerted by the sheer number of people in a given locale. You can get a rough idea of the gravity effects of major population bases if we consider the spread of a technological innovation. Take an example of the spread of Hummer vehicles in Pennsylvania. One way to chart their spread is to look for listings of Hummer dealerships in the phone book. The first dealerships opened in Philadelphia and Pittsburgh, the two largest cities in Pennsylvania. Philadelphia is in the far east of the state and Pittsburgh is in the far west of the state. The next opened just outside of Harrisburg, a smaller, more central city, but it is also the state capital. Only after dealerships had opened in these three cities did they begin to appear in smaller towns nearer the starting point of the innovation – Trevose (near Philadelphia), Monroeville (near Pittsburgh) and Emmaus (north of Philadelphia). This is exactly the kind of pattern we would predict from the gravity model, with the innovation appearing first in the main urban centres and then spreading to smaller towns outside the cities. The gravity model was originally used to describe the diffusion of non-linguistic innovations. Sociologists and economists had

Topic – 040: Study of Dialects in Sociolinguistics

Dialectology (from Greek διάλεκτος, dialektos, "talk, dialect"; and -λογία, -logia) is the scientific study of linguistic dialect, a sub-field of sociolinguistics. It studies variations in language based primarily on geographic distribution and their associated features. Dialects are linguistic varieties which may differ in pronunciation, vocabulary, spelling and grammar.

The question arises whether there are different dialects of English. We can divide major native dialects of English into three general categories:

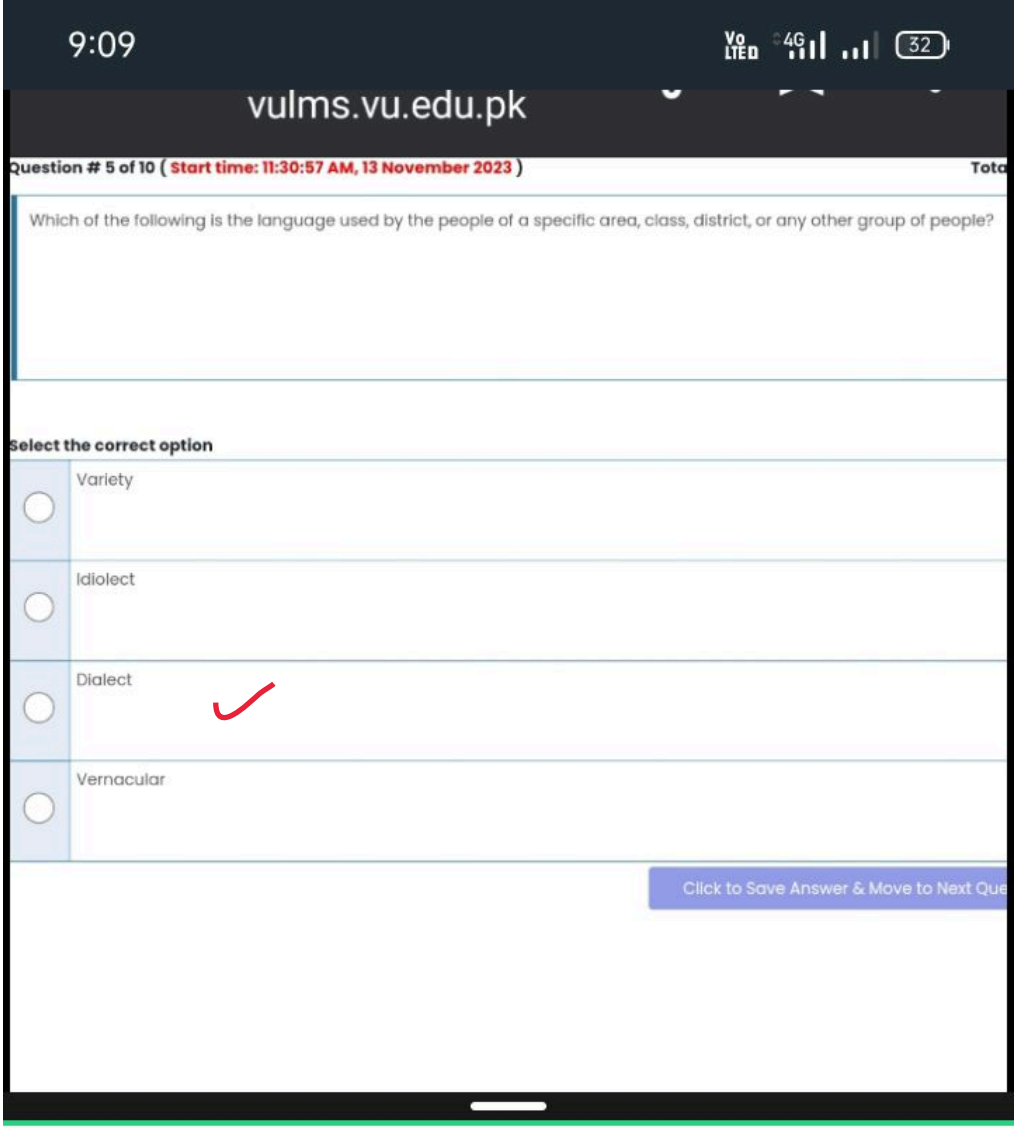

- the British Isles dialects
- of North America
- of Australasia

Study of Dialects: Principles

There are certain principles regarding study of dialects:

First Premise:

Linguistics is a descriptive rather than a prescriptive discipline.

specific area

Indian English, etc. Hence the greater `size' of the language English. The other contrast between 'language' and 'dialect' is a question of prestige, a language having prestige which a dialect lacks.

Whether some variety is called a language or a dialect depends on how much prestige one thinks it has for most of the people. For example, people in Britain habitually refer to languages which are unwritten (or which they think are unwritten) as dialects, or 'mere dialects', irrespective of whether it is a proper language to which they are related.

Topic – 032: Some Examples of Dialects

A dialect is the language used by the people of a specific area, class, district, or any other group of people. The term 'dialect' is a very powerful and common way of characterization, which elaborates the geographic and social background of any character. George Bernard Shaw's Pygmalion is a very easy way to explain the idea. In this play a Cockney girl is adopted by a well-to-do gentleman. This play is

difficult to read because of Cockney otherwise it will not be effective. Another example is of Huckleberry Finn (By Mark Twain). Look at the language of two characters here:

Jim: "We's safe, Huck, we's safe! Jump up and crack yo' heels. Dat's de good ole Cairo at

9. *vua*	*i-mai*	*nga-songo*
10. *eilep*	*i-me*	*a-ngas*

Linguists generally recognize two major language families in Papua New Guinea comprising between 700 and 800 languages, Austronesian and non-Austronesian (or Papuan). However, in Papua New Guinea there is no one-to-one mapping between village names, groups, and language names. Sometimes, up to four local names apply to what a district officer decided to call 'one' village, and some names are common to three or four sites. In addition, many groups have no special names for their languages. The Sare people of the Sepik, for example, call their language Sare, but this means simply 'to speak or talk'.

Explanations for the Existence of Extreme Linguistic Fragmentation of New Guinea:
