Reemphasizing their idea, to ensure that they have conveyed to the listener exactly what they wanted to convey. This process is known as **_____. ----repetition**

Short, pithy sayings that reflect the accumulated wisdom, prejudices, and superstitions of the human race are known as**_____. ---- Proverbs**

Which of the following is the major determining factor in the use of terms of address? **----- culture**

In Urdu language, pāni- shāni is _____ phenomenon**. ---- Reduplication**

The sentence, 'kitna khubsurat scene hai' is an example of ___ type of mixing**. ----noun**

As far as folklore in Pakistan is concerned, there is a lot of oral literature available in the _____languages of Pakistan. **---- regional**

General practices of _____ in Pakistan are also reflected in names and tittles**. ----code mixing**

Which of the following is a resultant process of frequent code mixing? **----language hybirdization**

Which of the following can help people in establishing interpersonal relationship? -----**greetings**

There are _____ types of descent involved in kinship**. ---3**

Define Reduplication.

Reduplication in linguistics is a morphological process in which the root or stem of a word (or part of it) or even the whole word is repeated exactly or with a slight change.

Define Ethnography of communication.

Hymes is best known for his founding role in the ethnography of communication. He proposed the term 'ethnography of speaking'. But later he amended it to 'ethnography of communication'. It was a new approach to understanding language in use. Ethnographies of communication must 'discover and explicate the competence that enables members of a community to conduct and interpret speech'. The exploration and documentation of communicative competence within a speech community is the essence of the ethnography of communication. As a means to this end, Hymes defines the social units and units of analysis for ethnographies of communication.

Impacts of language contact.

In the context of multilingualism issues of linguistic identity and relevant social issues emerge; and language contact in the social network of multilingual society makes it a very complicated situation. In other words there are various social and cultural push and pull forces that operate on various contact languages. As far as the impact of language contact is concerned, it becomes

evident in various forms such as code switching, code mixing, language-shift and language desertion.

Define Diglossia.

Diglossia is a relatively stable language situation in which, in addition to the primary dialects of the language there is a very divergent, highly codified superposed variety. Ferguson's definition of diglossia: "The vehicle of a large and respected body of written literature, either of an earlier period or in another speech community, which is learned largely by formal education and is used for most written and formal spoken purposes but is not used by any sector of the community for ordinary conversation".

Issues of language identity in Pakistan.

Name the discipline that should be related to sociolinguistics.

Two basic perspectives on the study of language are the following:

1. Anatomy of Language (Structure)
2. Physiology of Language (Functioning)

Sociolinguistics is the descriptive study of the effect of any and all aspects of society, including cultural norms, expectations and context, on the way language is used, and society's effect on language. It shares the general goal with a lot of other disciplines. In its broad goal of describing language and its

High and Low varieties of language. Define.

High and low refer to the varieties of the same language used in different situations. Low is the non-standard form spoken by regular people in their everyday lives. High is the standard and/or upper variety that is used in official situations and as the written form.

High/low distinction is used when the standard variety of the language differs significantly from its colloquial dialects. Sometimes the difference between the high and low varieties is so big that the language has become diglossic. That's the case for example with Arabic and Swiss German. Everyday speech spoken by Arabs and German-speaking Swiss people are local dialects and thus low varieties but their written language as well as the language spoken in official situations is the high variety, in Switzerland High German, and in the Arab countries Standard Arabic.

High and low varieties are said to have their own domains where they are used. They represent the same language but the choice between them is determined by social settings.

Horizontal and Vertical Channels.

It is very important for sociolinguists to have a sense of what the patterns of associations are between people who are friends or roughly social equals within a community. This is because the diffusion of linguistic change happens relatively fast and very efficiently along what we might call **horizontal channels** e.g., within one age group and a social cohort. What we might call **vertical channels** e.g., channels between generations or across big social divides are a comparatively slow and inefficient means of transmitting innovation. So, it is common knowledge that kids talk like their friends, not their parents.

Explain Linguistic Imperialism.

English is playing a fundamental role in the promotion of global inequalities and structures of dependency. Phillipson refers to it as linguicism, and asserts, "the ideologies and structures which are used to legitimate, effectuate and reproduce an unequal division of power and resources (both material and non-material) between groups which are defined on the basis of their language i.e., of their mother tongue." He calls it linguistic imperialism and states, "an essential constituent of imperialism as a global phenomenon involving structural relations between rich and poor countries in a world characterized by inequality and injustice." According to Phillipson, imperialism is a type of relationship whereby "one society or collective in more general terms can dominate another" and which manifests itself in a variety of ways: economically, politically, militarily, culturally and socially.

Issues in primary education in Pakistan.

Issues related to primary education in Pakistan include low level of public investment as public expenditure on education has been 2.2 percent of GNP in recent years. There has been more focus of funds on higher education. Another issue is of lower income class and particularly it is related to the issues of private education where there is always a compromise on quality.

Role of English in Law, Politics and Government in Pakistan.

English has dominated the political and official landscape in Pakistan as in other developing countries for a long time as the language for development. It is also the language of government, law, and politics. English as a language of government has an everyday usage at higher levels and for official documentation as well as for formal meetings. As far as English as a language of law is concerned, it has a colonial heritage; and the availability of legal documents is mostly in only English language. When it comes to English as language of politics the emblematic status of English due to its historical association with the elite has helped in making

it a language associated with prestige. There are various political factors that also play a significant role.

How language is related to power. Explain.

When we think of language and power we need to think how they both inter-relate. Language use does not take place in vacuum. In the same way power exertion also does not happen in vacuum. Regarding the Pakistani social context we also need to keep in mind the changing social scenario and political aspect of this social context. In fact language is as a determiner of power. It is a dividing and a unifying force. Ideological power, linguistic power, economic power and power of media all interrelate.

Idiom in Sociolinguistics.

Any expression that means something other than its words seem to suggest can be called an idiom. The study of language constantly requires in interpretation of socially determined meaning. Proverbs and idioms are also determined by a socio-geographical experience. Proverbs, like riddles, jokes or fairy tales, do not fall out of the sky and neither are they products of a mythical soul of the folk. Instead they are always coined by people in context.

Here are some examples in this regard:

- 'More beauty than a peacock, but the intelligence of a block of wood' (Mangolian).
- 'A doll's head and an empty brain' (Polish)'.
- "Women are wacky, women are vain; they'd rather be pretty than have a good brain (English, USA)".
- "Women have only half a brain" (Arabic).
- "aurat naqis- ul- aqal hoti hai" (Urdu).

3 social media trends.

Higher engagement of emerging social media rates between brands and customers. Brands are suddenly realizing the impact of social media engagement and creating lasting. According to Instagram, at least 80% of its users already follow a brand on the network.

Customizable Chatbots:

- Incoming social messages to your brand need a response.
- An organization receives hundreds or thousands of similar customer service questions
- Solution is chatbots.

In-Platform messaging and Instagram stories

- Instagram stories

• Snapchat
• Instagram stories accrued more than 250 million daily users.
• 173 million daily active Snapchat users

3 education drawback in Pakistan.

Drawbacks in the education system include

1. Little understanding of curricular objectives
2. Inexperienced teachers
3. Defective methods

National language of Pakistan.

The linguistic situation of Pakistan is a highly complex arena with several regional languages, a national language (Urdu) and English as an international language/ as a foreign/as second language. There is immense regional and linguistic diversity in Pakistan. We have Pakhtuns, Balochis, Punjabis, and Sindhis. Diverse cultural traditions exist and people speak different languages. Urdu is written in a modified version of the Persian script, from right to left. It is not indigenous to Pakistan and in its literary form it emphasizes words of Persian and Arabic origin. It enjoys great prestige as a symbol of the Pakistan movement and as the national language of Pakistan. The greatest concentration of speakers of Urdu is in Punjab and Karachi. Urdu is preferred against all the regional and local languages for use in all the formal situations, though with the passage of time English is taking its place in the formal sphere of life. In spite of its status as the national language, however, only a few percent of Pakistanis speak Urdu as their first language. Since independence it has the status as a national language, but there has always been a demand for cultural autonomy in other provinces, and resentment against discriminating govt. policies. There is a tension between Urdu and local languages on one level, and Urdu and English on the other level. But, Urdu has always been favored in all the language policies.

Issue of data collection.

Data collection in sociolinguistics is of crucial significance and due to its significance the issues attached to it also become significant. Various data collection techniques are employed in analyzing social variation and language use. There are various options available such as:

1. Working with the existing data
2. Generating new data
3. The sociolinguistic interview

4. Free conversation

5. Issues

Social media and unusual spellings.

Language, media and society make a trio. In this technological age of computers and social media, spellings are speedily changing. If we say that spellings are going almost extinct it will not be completely wrong. What we need to think is how far and how much we are affected by social media. Every day we use a variety of options available such as:

• Twitter • Facebook • Instagram • WhatsApp • Websites • SMS

As an individual think of how much of time do you spend on social media; and what kind of activities you are involved in? This would give you a realization that most of it is in written form. Also think about what kind of writing you come across. With autocorrect, twitter, and text lingo, it appears that people are becoming progressively more unconcerned with their ability to spell. This has a tremendous impact on spelling. We as users need to consider what the practices are. As people type at speed online, there is now a "general attitude" that there is no need to correct mistakes or conform to regular spelling rules. Children brought up with the internet do not question wrongly spelt words.

Three features of kinship.

Morgan identified six basic patterns of kinship terminologies:

1. Hawaiian kinship only distinguishes between sex and generation. Thus, siblings and cousins are not distinguished the same terms are used for both types of relatives.

2. Sudanese kinship No two types of relatives share the same term. Siblings are distinguished from cousins, and different terms are used for each type of cousin i.e. father's brother's children, father's sister's children, etc.

3. Eskimo kinship In addition to sex and generation, it also distinguishes between lineal relatives those related directly by a line of descent and collateral relatives those related by blood, but not directly in the line of descent.

Three types of non-linguistic communication.

Nonlinguistic communication may be conventional orspontaneous. Conventional nonlinguistic means =Gestures incomprehensible to the unlimited, usually stipulated beforehand and sometimes codified into rules of usage.

Spontaneous gestures are divided into four groups:

1. Pointing gestures

2. Gestures that convey or reveal emotions
3. Emphatic gestures
4. Rhythmical gestures

Define term media.

Media is the plural form of medium, which (broadly speaking) describes any channel of communication. This can include anything from printed paper to digital data, and encompasses art, news, educational content and numerous other forms of information. Digital media, which makes up an increasingly vast portion of modern communications, is comprised of intricately encoded signals that are transmitted over various forms of physical and virtual media, such as fiber optic cable and computer networks.

Linguistic relativity.

The principle of linguistic relativity holds that the structure of a language affects its speakers' world view or cognition. It is popularly known as the Sapir–Whorf hypothesis, or Whorfianism. It was first discussed by Sapir in 1929, the hypothesis became popular in the 1950s following posthumous publication of Whorf's writings on the subject.

Two versions of Sapir–Whorf hypothesis: 1. The strong version asserts that the language determines thought, and linguistic categories limit and determine cognitive categories. 2. The weak version believes that the linguistic categories and usage only influence thought and decisions

Functions of proverbs.

Online Oxford Dictionaries define a proverb as "A short, well-known pithy saying, stating a general truth or piece of advice". Another definition is "A short, memorable, and often highly condensed saying embodying, esp. with bold imagery, some commonplace fact or experience". Proverbs are very closely associated with cultures. The New Dictionary of Cultural Literacy (2002) defines it as "short, pithy sayings that reflect the accumulated wisdom, prejudices, and superstitions of the human race".

Ethnography of speaking.

Hymes is a major figure in ethnography of speaking. He expanded concerns about language study beyond description. According to him it is the analysis of communication within the wider context of the social and cultural practices and beliefs of the members of a particular culture or speech community. A church sermon is an example of a complete social event which involves

the following: • Speaker • Listener • Message • Channel • Register • Underlined complex set of socially recognized rules • Breaches if normal conditions of sermon

The ethnography of communication is a term that is meant to be descriptive of the characteristics that an approach towards language from an anthropological standpoint must take. According to Hymes, (1962, 1964):

1. It must "investigate directly the use of language in contexts of situations so as to discern patterns proper to speech activity".
2. It must "take as context a community, investigating its communicative habits as a whole."
3. Rather than divorcing linguistic form from its function, the analysis of a culture's or community's communication, linguistic and otherwise, must occur with respect to the sociocultural context of its use.
4. It is used as a methodological tool.
5. Empirical studies

Techniques of data collections.

Data collection in sociolinguistics is of crucial significance and due to its significance the issues attached to it also become significant. Various data collection techniques are employed in analyzing social variation and language use. There are various options available such as:

1. Working with the existing data
2. Generating new data
3. The sociolinguistic interview
4. Free conversation
5. Issues

Language contact.

As a general observation and experience we know that different groups of speakers using different languages come into contact. Language contact occurs when speakers of two or more languages or varieties interact and influence each other. The study of language contact is called contact linguistics. Sometimes unrelated languages that are typical of creole language formation come in contact. We also look at a variable spreading due to contact between different varieties of English. A new variant is introduced into a relatively stable and elaborate system.

Define greetings.

Greetings are an exchange of cheerful expressions or good wishes between two people or a group of people. Greetings can help people in establishing interpersonal relationship. They can

be used as an introductory remark to begin of a proper conversation. Greeting is an expression that may occur on the road, at work, shopping, the coffee shop, meetings, home and social functions. As greeting is one of the means of developing interpersonal relationships, it is worth studying from sociolinguistic point of view.

Social networks.

The social networks model offers a far less abstract framework than that of the speech community. It focuses on the social ties that specific speakers have with each other, and examines how these ties affect speakers' linguistic usage. A key component of the social network model is measuring its strength, calculated by classifying whether networks are 'dense' or 'loose', as well as whether they are 'uniplex' or 'multiplex' (Milroy, 2001, p. 550). A network is dense if members that you interact with each other otherwise, it is loose. If members know each other in more than one way, for example, they work together and are members of the same family, and then the links are multiplex as opposed to uniplex. Dense and multiplex social networks tend to support localized linguistic norms, and they function as a method of norm reinforcement, whereby linguistic and other social norms are maintained by members of the network.

Inter sentential switching with two examples.

Inter-sentential (or inter-sentential) codeswitching refers to a type of codeswitching: the alternation in a single discourse between two languages, where the switching occurs after a sentence in the first language has been completed and the next sentence starts with a new language

Linguistics rights.

Linguistic rights are the human and civil rights concerning the individual and collective right to choose the language or languages for communication in a private or public atmosphere. Linguistic rights were first included as an international human right in the Universal Declaration of Human Rights in 1948. Across the globe, there is a perceptible shift in the analysis of the form and use of the English language. Against the notion of the 'linguistic imperialism' of British and American English (Phillipson, 1992) the development of bilingualism and English as an International Language (EIL), which allows the inclusion of varieties of English and recognizes the contribution of non-native speaker teachers, is beginning to form a counter-offensive.

Status of English in Pakistan.

There are various factors and multiple reasons that contribute towards the role and status of English in Pakistan. The multi- cultural and multi-lingual context of Pakistan is not very simple to understand. To understand the role and status of English in Pakistan following aspects need to be considered:

- Place of English in linguistic hierarchy
- Language power and social context
- Social status ladder
- Historical background of English
- Colonial experience
- Language of the rulers
- Placement of English in the language policy of Pakistan
- Placement of English in the education policy of Pakistan
- English and economic power
- English and power of media

Define the names of two programs of bachelor in Pakistan.

There are two types of Bachelor courses in Pakistan: Pass or Honors. Pass degree requires two years of study. Language choices and related language issues are involved in this regard. There are various cultural aspects of language issues and linguistic consequences as well as social consequences.

How language is related to power.

When we think of language and power we need to think how they both inter-relate. Language use does not take place in vacuum. In the same way power exertion also does not happen in vacuum. Regarding the Pakistani social context we also need to keep in mind the changing social scenario and political aspect of this social context. In fact language is as a determiner of power. It is a dividing and a unifying force. Ideological power, linguistic power, economic power and power of media all interrelate.

Issues of Linguistic unity in Pakistan.

Pakistan is multi-cultural and multilingual. To understand these dimensions we need to think of "unity in diversity" and "diversity in unity". Language is a dividing power and simultaneously language is a unifying force. There are various issues and aspects of identity such as:

- Cultural
- Political

- Linguistic
- Ethnic/ Racial

Scope of research in sociolinguistic.

The scope of research in sociolinguistics relates to most up to-date and the most rapidly advancing areas of research including language and identity and language and gender. Sociolinguistics, combined with other disciplines, offers enhanced engagement through the inclusion of thought-provoking perspectives and questions. Significant areas of research in sociolinguistics are various. Over time, sociolinguistics has developed dialectological core interest and expanded its field of interest. In the social sciences, rigorous awareness of the principles underlying exploration and explanation led to a highly developed critical theory which sociolinguistics has also drawn on. This has resulted in macro-sociolinguistic work in the consequences for language of globalization and the multinational economy: politics, ideology and education policy have become key areas for sociolinguists. Sociolinguistics provides the possibilities of exploring local and international contexts, and to make comparisons and contrasts. The negotiation and manipulation of power and powerlessness, status and stigma, consensus and conflict are all matters for analysis within sociolinguistics.

Social class issues related to English in Pakistan.

In order to understand the relationship of English and social class issues in Pakistan first we need to understand in the social setup who is who? How do you know this positioning of who is who? What are the determiners of this social class positioning? As an answer we may say that generally speaking economics is the determiner. The question is: Apart from economics how is social status reflected in life style, dressing, social behavior and linguistic behavior? Consequently, it is used to exert power, demonstrate knowledge, and assert position. Use of English in the domains of power includes its use in government, business, higher education and media.

Social networks.

The social networks model offers a far less abstract framework than that of the speech community. It focuses on the social ties that specific speakers have with each other, and examines how these ties affect speakers' linguistic usage. A key component of the social network model is measuring its strength, calculated by classifying whether networks are 'dense' or 'loose', as well as whether they are 'uniplex' or 'multiplex'. A network is dense if members that you interact with each other otherwise, it is loose. If members know each other in more

than one way, for example, they work together and are members of the same family, and then the links are multiplex as opposed to uniplex. Dense and multiplex social networks tend to support localized linguistic norms, and they function as a method of norm reinforcement, whereby linguistic and other social norms are maintained by members of the network. In contrast, in loose and uniplex social networks, language change will be more likely to occur, owing to the lack of norm reinforcement.

Status of oral literature in Pakistan.

There are various famous forms of oral literature in Pakistan which include folklore, tappa, lori, qisa, geet etc. As far as folklore in Pakistan is concerned, there is a lot of oral literature available in the regional languages of Pakistan. Here are some details:

Sindh folklore: The love story of Sassui and Punhu, is known and sung in every Sindhi settlement.

Balochi folklore: Stories of Hani and Shah Murad Chakar

Pakhtun folklore: Songs sung with Khattak dance. The romantic tale of Adam Khan and Durkhanai features a lute-player (rabab) whose music earns her love.

Punjabi folklore: Heer and Ranjha from Jhang is very famous. Today it is celebrated in songs, movies and theatre.

Impact of language contact in Pakistan.

Pakistan has multiple languages and dialects as well as multiple identities. We have an official language, a national language and a huge variety of regional languages. Language/s of an average Pakistani need to be considered from various aspects which include language/s in the school, market and for business, on street, at home and with friends. Also certain other factors such as multilingualism that is a social norm play a vital role. In the context of multilingualism issues of linguistic identity and relevant social issues emerge; and language contact in the social network of multilingual society makes it a very complicated situation. In other words there are various social and cultural push and pull forces that operate on various contact languages. As far as the impact of language contact is concerned, it becomes evident in various forms such as code switching, code mixing, language-shift and language desertion.

Role of English in law, politics and government in Pakistan.

English has dominated the political and official landscape in Pakistan as in other developing countries for a long time as the language for development. It is also the language of government, law, and politics. English as a language of government has an everyday usage at

higher levels and for official documentation as well as for formal meetings. As far as English as a language of law is concerned, it has a colonial heritage; and the availability of legal documents is mostly in only English language. When it comes to English as language of politics the emblematic status of English due to its historical association with the elite has helped in making it a language associated with prestige. There are various political factors that also play a significant role.

Domain of market and business.

In Pakistan, everyday market language is Urdu. However, when it comes to the elite business class and language use we can easily notice that English is used as a medium of communication and interaction. Formal meetings and official processes are carried out in English. Whether we accept it or not, whether we are ready for it or not English is now the global language of business around the world; and this factor has a strong impact on Pakistan as well. More and more multinational companies are mandating English as the common corporate language. Pakistan too needs it for communication and performance of business endeavors across geographically diverse areas.

D**ifference between low and high variety.**

• Low variety is learnt as mother tongue.
• High variety is learnt at school.
• Speakers of H variety explicitly know the grammar of H variety.
• Don't know the grammar of L variety. But speak L variety in informal situations.
• Consider it a corrupted form of H variety.

H variety uses: • Higher Education • Business • Newspapers • Media Broadcasts • Sermons • Formal Lectures • Writing

L variety uses: • Everyday life • Home • Family • Street • Marketplace • Friends

Scope of teaching sociolinguistics.

Significance and scope is evident from the fact that it helps to understand the following the patterns of multilingualism in the global context. It also helps to identify the shape of new language varieties, helping to define ethnicity and identity in various contexts. And, finer gradations can be made between core sociolinguistics and social linguistics and the sociology of language from the point of view of teaching. Its scope includes the international and interdisciplinary diversity of the field in representing the broad view of sociolinguistics. Together with second language research and teaching (which itself owes much to sociolinguistic work),

sociolinguistics is the central discipline of applied linguistics. It has practical outcomes for education policy, government spending, social affairs, constitutional arrangements, international relations, debates on ethnicity, nationalism, multiculturalism and cultural values. Significance and scope of teaching sociolinguistics in relation to other disciplines can be understood by relating it to the following disciplines:

- Discourse Analysis
- Pragmatics
- Ethnography

Modes of address.

Address terms is an important feature of social interaction which can provide valuable information about the interlocutors, their relationship and their circumstances. Address terms play a crucial role in communication and maintaining social relationships between members of a society. They need to be studied in every language and culture. According to Yule (2006), address term is a word or phrase for the person in the context. According to Leech (1999), an important formulaic verbal behavior is well recognized in the sociolinguistic literature as they signal transactional, interpersonal and deictic ramifications in human relationships. Modes and terms of address are important in any society for the purposes of identification and expression of ideas. The use of these terms depends upon the social rank, age, and the gender of the persons involved in any communicative situation" (Girish, 2005). In the past few decades, sociolinguists have shown great interest in studying address terms as they reflect the social relationships between members of a specific speech community. They are not static; and they vary according to the social contexts. Social factors such as class, education, occupation, age, gender, power, solidarity, politeness, race and ethnicity, religion influence the use of address terms. Culture is a major determining factor in the use of terms of address. Members of a speech community utilize various address terms according to their socio-cultural relationship. They can include proper names, nicknames, titles, pronouns, prefixes and other referent terms with semantic significance.

Native speakers of English.

There are more speakers of English as second or other language than as a 1st or native language (Crystal, 2003). A question to be considered is: What precisely does it mean to be a native speaker of a language? Common- sense view is that one who is born in a community of other speakers of English, and acquires his language from parents. Others may turn to them for

guidance. The question is what is acceptable or not; and whether a particular grammatical construction is better or worse than another. The 'arbitration' role of the native speaker is problematized when one considers communities. For example: In India non- native speakers use English for such a wide variety of purposes that the views of the native speaker become less and less relevant; and more local norms of usage emerge. Being a native speaker gives a sense of community, and with that, a sense of identity. Being a native speaker of English gives you a different identity from the group of individuals who are native speakers of French. An interesting issue in this regard is of bilinguals: For example, individuals from Montreal in Canada who are bilingual speakers of French and English. The question arises whether they are members of both groups simultaneously, or form instead a group of their own? Some speakers align themselves with what they perceive as a particular local variety. Within England, for example, this might be as a 'northerner', or more locally as a 'north- westerner. So, there are issues of identity.

Social media.

There are various definitions available. For example, simply it can be defined as "Websites and applications that enable users to create and share content or to participate in social networking". Gitelman and Pingree (2003) have presented a temporal approach that is based on using the term "media in transition". It is a period of time during which a medium is emergent and thus a sort of contrast to and competitor for the old media. Manovich (2002) has defined new media as cultural objects "which use digital computer technology for distribution and exhibition". Social media are computer mediated technologies that facilitate the creation and built-in social media services currently available.

Spontaneous gestures in four groups.

Spontaneous gestures are divided into four groups:

1. Pointing gestures,
2. Gestures that convey or reveal emotions
3. Emphatic gestures,
4. Rhythmical gestures

Gestures are not universal and are unique to a given language group. For example, sticking out tongue stands for teasing by Europeans, a threat among the Chinese, anger in India and wisdom in Ancient Maya. Nonlinguistic means of communication may accompany ordinary speech.

Unanswered questions:

Why people are leaving their mother tongue.

Ethnography of Education.

Influence of media on language in Pakistan.

Social trends in Pakistan.

Status of second language acquisition in Pakistan.

Explain low and high variety in Pakistan.
