By Muhammad Imran collaboration with Future zoologist group.	BT406 Research Methodology & Skill Enhancement
PAST PAPERS SOLVED QUESTIONS 100 percent correct answers.	FINAL TERM

1. Define historiography?

Historiography is the method of doing historical research or of gathering and analyzing historical evidence

2. Explain validity of secondary data?

Reliability and Validity

Existing statistics and secondary data are not trouble free. Researchers must be concerned about validity and reliability .

A common error is the fallacy of misplaced concreteness. Someone gives a false impression of accuracy by quoting statistics in greater detail than warranted by how the statistics were collected.

Validity problems

Researcher's theoretical definition may not match with government agency or organization that collected the data. *Unemployed.*

Researcher lack control over how the data were collected. Data collection as part of job. No quality control – systematic errors. Typographical errors.

3. How can we categorized descriptive statistics give example?

Descriptive statistics describe numerical data. They can be categorized by the number of variables involved: univariate, bivariate, or multivariate (for one, two, and three or more variables). Univariate statistics describe one variable.

Researchers often want to summarize the information about one variable into a single number. They use three measures of central tendency, or measures of the center of the frequency distribution: mean, median and mode, which are often called averages (a less precise and less clear way to say the same thing). The mode is simply the most common or frequently occurring number. The median is the middle point. The mean also called the arithmetic average, is the most widely used measure of central tendency. A particular central tendency is used depending upon the nature of the data.

4. Different qualitative and quantitative research with example?

Qualitative research

To gain an in-depth understanding and explanation of some particular social phenomenon The data collection is done by interviewing; however, an understanding of the social phenomenon and personal lived experiences of individuals might be gained via non-intrusive qualitative approaches in which there searcher might use texts, journals, written narratives or observations.

Quantitative research

Quantitative research, on the other hand, explores descriptive analysis of characteristics through variables or answers questions about the relationships among variables.

5. Emnurate the part of main body of reseach report?

Introduction:

-- Background
-- Objectives
Methodology.
Results → can be divided into different areas.
Limitations.
Conclusions and recommendations
References.
Acknowledgements
Appended parts Data collection forms (questionnaires, check list, interview guide, other forms).
Detailed calculations. General tables. Other support material. Bibliography, if needed.

6. What points should one keep in mind while putting other research work done in table?

I. Give each table a number. II.
Give each table a title.
III. Label the row and column variables, and give name to each of the variable categories.
IV. Include the totals of the columns and rows. These are called as marginal.
V. Each number or place that corresponds to the intersection of category for each variable is cell of a table.
VI. Missing information to be given under the table

7. What is running record?

Files or existing statistical documents maintained by organizations. Vital statistics.

8. Explain participant and non-participant observation study?

Participant Observation

Participant observation is immersion in a culture. Ideally, the ethnographer lives and works in the community for six months to a year or more, learning the language and seeing patterns of behaviour over time. Long-term residence helps the researcher internalize the basic beliefs, fears, hopes and expectations of the people under study. (1989:45)

Nonparticipant Observation

Non-participant observation involves merely watching what is happening and recording events on the spot.

"Non-participant observation exists only where interactions are viewed through hidden camera and recorder or through one-way mirror" (1984: 143).

9. Enlist 5 qualitative research John W Creswell in his book?

Five qualitative research methods are discussed in this subject as discussed by John W. Creswell in his book. Following are the five qualitative research methods:

1. Narrative Research. 2. Phenomenology 3. Grounded Theory. 4. Ethnography. 5. Case Study

10.	Explain function of record in focus group?

Keep a record of the content as well as emotional reactions and nature of group interactions.
Record the following:
-Date, time, and place.
-Names and characteristics of participants.
-Description of group dynamics
Opinions of the participants, as far as possible in their own words, especially the key statements.
Emotional aspects (reluctance, strong feelings attached to certain opinions)
- Vocabulary used.

3 Marks Questions

11.	Difference between survey interview and field research interview?

Survey Interview: It has a clear beginning and end. • The same standard questions are asked and in same sequence.
• Interviewer appears neutral at all times. Interviewer asks questions, and the respondent answers. • It is almost always with one respondent alone. Professional tone and business like focus; diversions ignored. • Closed ended Qs are common; rare probes. • Interviewer controls the pace and direction of interview. Social context of interview is ignored and assumed to make no difference. • Interviewer attempts to mold the communication in a standard framework.

FR Interview: The beginning and end are not clear. • Questions and order are tailored to specific people and situations. • Interviewer shows interest in responses, encourages elaboration. It is like a friendly conversational exchange, with more interviewer questions. • It can occur in group setting or with others in area. Interspersed with jokes, stories, diversions. • Open ended Qs are common; probes frequent. • Interviewer and member jointly control the pace and direction of interview. Social context of interview is noted and seen as important for interpreting the meaning or responses. • Interviewer adjusts to member's norms and language usage.

12. Enlist 6 features of theoretical framework?

1. Make an inventory of variables
2. Specify the direction of relationship
3. Logic for the proposed relationship
4. Make an inventory of propositions
5. Arrange propositions sequentially
6. Present schematic diagram

14. Difference between ethnography and phenomenology?

Phenomenology: A phenomenological study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.
Ethnography: Ethnography is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values, behaviors, beliefs, and language of a culture-sharing group (Harris, 1968). An ethnography focuses on an entire cultural group which may be small, but typically it is large, involving many people who interact over time 'ethnography involves extended observations of the group, most often through participant observation.

15. Difference between scale and index?

Scale is a measure to capture the intensity, direction, level, or potency of a variable. Arranges responses on a continuum. A scale can use single indicator or multiple indicators. Ordinal level.

Index is a measure in which researcher adds or combines several distinct indicators of a construct into a single score. Composite score.

17. Differentiate between narrative research and phenomenological research?

Narrative research • "Narrative is understood as a spoken or written text giving an account of an event/action or series of events/actions, chronologically connected". • The procedures for implementing this research consist of focusing on studying one or two individuals, gathering data through the collection of their stories, reporting individual experiences, and chronologically ordering (or using life course stages) the meaning of those experiences.

A phenomenological study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. • The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.

18. Differentiate between critical & realistic ethnography?

The realist ethnography is a traditional approach used by cultural anthropologists. It reflects a

particular stance taken by the researcher toward the individuals being studied •
The critical ethnography involves the authors advocate for the emancipation of groups marginalized in society.

19. Challenges in implementing case study?

The case study researcher must decide which bounded system to study
The researcher must consider whether to study a single case or multiple cases.
Selecting the case requires that the researcher establish a rationale for his or her purposeful sampling strategy for selecting the case and for gathering information about the case.

20. What are the limitations of focused group discussion?

The moderator may influence the participants (bias).
FGDs have limited value in exploring complex beliefs of individuals.
FGDs can paint a picture of what is socially acceptable in a community rather than what is actually occurring or believed. (real and ideal problems)

21. Main body of report?

Introduction. -- Background -- Objectives Methodology. Results can be divided into different areas.
Conclusions and recommendations Acknowledgements. Limitations References. Constitutes the bulk of the report. It includes: Introduction, methodology, results, and limitations of the study. It finishes with conclusions and recommendations based on results.

Long 5 Marks

22. Difference between cross sectional and longitudinal studies?

Cross-Sectional Studies are carried out once and represent a snapshot of one point in time. Data are collected just once, perhaps over a period of days or weeks or months, in order to answer the research question.
Longitudinal Studies are repeated over an extended period. The advantage of longitudinal studies is that it can track changes over time. For example, the researcher might want to study employees' behavior before and after a change in the top management, so as to know what effects the change accomplished. Here, because data are gathered at two different points in time, the study is not cross - sectional or of the one-shot kind, but is carried longitudinally across a period of time. Such studies, as when data on the dependent

variable are gathered at two or more points in time to answer the research question, are called

longitudinal. Longitudinal studies can be panel studies and cohort studies which were discussed earlier.

23. Write the procedure of implementation in narrative research?

1. Determine if the research problem or question best fits narrative research. Narrative research is best for capturing the detailed stories or life experiences of a single life or the lives of a small number of individuals.
2 . Select one or more individuals who have stories or life experiences to tell, and spend considerable time with them gathering their stories through multiples types of information.
3. Collect information about the context of these stories. Narrative researchers situate individual stories within participants' personal experiences (their jobs, their homes), their culture (racial or ethnic), and their historical contexts (time and place).
4. Analyze the participants' stories, and then "restore' them into a framework that makes sense. Restoring is the process of reorganizing the stories into some general type of framework.
5. Collaborate with participants by actively involving them in the research. As researchers collect stories, they negotiate relationships, smooth transitions, and provide ways to be useful to the participants.. What points should be kept in mind while presenting a table to one's research?

24. What is focus group discussion?write the purpose of FGD?

A focus group discussion is a group discussion of 6-12 persons
Guided by a facilitator,
Participants talk freely and spontaneously about a certain issue.

The purpose of FGD:

To obtain in-depth information on concepts, perceptions, and ideas of the group.
More than an question-answer interaction.
Group members discuss the topic among themselves.

Long 10 Marks

27. Role of recorder in FGD 10 marks

Functions of the Recorder

Keep a record of the content as well as emotional reactions and nature of group interactions.
Record the following: -
Date, time, and place. –
Names and characteristics of participants.
- Description of group dynamics (level of participation, presence of a dominant participant, level of interest).
- Opinions of the participants, as far as possible in their own words, especially the key statements. – Emotional aspects (reluctance, strong feelings attached to certain opinions).
– Vocabulary used.

Assist the facilitator by drawing his/her attention to missed topics or missed comments from the participants. Help the facilitator resolve the conflict if necessary. Make sure a copy of the list of topics and key probe questions is available and referred to during the FGD.

28. What is research 2

Gathering information needed to answer a question, and thereby help in solving a problem.
Systematic and organized effort to investigate.

29. Two types of grounded theory study 2

The two popular approaches to grounded theory are the systematic procedures of Strauss and Corbin (1990, 1998) and the constructivist approach of Charmaz (2005, 2006).
In the more systematic, the investigator seeks to systematically develop a theory that explains process, action, or interaction on a topic.
Charmaz‟s approach is known as the constructivist grounded theory method as it adheres to a constructivist philosophical approach, wherein both the researcher and participants mutually co-construct meaning during data collection and analysis.

31. The Components of the Theoretical Framework

1. Make an inventory of variables
Identify the variables relevant to the study.
Search the literature, talk with informants, and observe

2. Specify the direction of relationship
Theorize the direction of relationship among the variable → negative or positive

3. Logic for the proposed relationship
Theorize the logical relationship between different variables.
Argument could be built up on the basis of previous studies, observations, inferences.

4. Make an inventory of propositions
Stipulation of logical relationship between two variables ends up in a proposition.
Number of interrelationships resulting in a number of propositions.
Each proposition supported by rigorous logic.
Take stock of the propositions.

5.Arrange propositions sequentially
Interlink the propositions and arrange them sequentially.
Axiomatic derivation.
This will be theoretical framework

6. Present schematic diagram

Helps in understanding the theorized relationships among the variables.
