

PSY405 - Lesson 31

Henry Murray's Personology (Continued)

Henry Murray believed that **personality is complex, dynamic, and deeply individual**. He didn't see people as machines reacting automatically. Instead, he saw them as **living systems of needs, emotions, experiences, and meanings**.

This lesson continues with **advanced but very important ideas** in his theory.

◆ 5. Tension Reduction

Academic Meaning

Murray believed that:

- When a **need** is activated, the person experiences **tension**
- When the need is satisfied, **tension is reduced**
- Over time, people **learn behaviors and pay attention to objects** that help reduce tension

This idea comes from **drive theories** in psychology.

Key Scientific Terms

- **Need:** An internal psychological force that pushes a person to act
 - **Tension:** An uncomfortable state caused by an unmet need
 - **Tension reduction:** Relief felt when the need is satisfied
 - **Effect needs:** Needs where satisfaction comes from the *outcome* (e.g., hunger, achievement)
-

Murray's Important Addition

Murray said:

| This picture is incomplete

Why?

Because humans **don't only reduce tension** — sometimes they **create tension on purpose**.

Plain English Explanation

People sometimes:

- Delay pleasure
- Take challenges
- Put themselves in stressful situations

Why?

Because **reducing a bigger tension later gives greater pleasure**.

Everyday Examples

- Studying hard for exams → stress → passing → *huge relief*
- Watching a scary movie → fear → relief → enjoyment
- Saving money → tension → buying something later → satisfaction

👉 So humans don't avoid tension; they often **use it to increase pleasure**.

Important Limitation

This idea applies mainly to **effect needs**.

It does **NOT** fully apply to:

- **Process activity needs** (enjoyment during the activity itself)
- **Modal needs** (how an activity is done)

For these, **pleasure exists throughout the activity**, not just at the end.

📌 Example:

- Dancing → enjoyable from start to finish
 - Painting → pleasure in the process itself
-

◆ 6. Thema

📖 Academic Definition

A **thema** is an **interactive behavioral unit** that represents:

The interaction between a need (inside the person) and a press (environmental force)

🧠 Key Terms

- **Press:** Environmental pressure or situation that affects behavior
- **Thema:** A complete episode showing how a need and press interact
- **Dyadic unit:** Interaction between *two people* (not one alone)

🌱 Plain English Explanation

A **thema** is a **story-like episode** that shows:

- What happened
- What need was triggered
- How the person responded
- What the outcome was

Murray believed personality must be studied **in relationships**, not isolation.

📖 Examples from Murray

Example 1: Rejection

- Someone ignores you → (*rejection press*)
- Your **rejection need** is activated
- You ignore them back

👉 This is a **rejection thema**

Example 2: Achievement

- You fail an exam → (*failure press*)
- Your **achievement need** is triggered
- You work harder next time

👉 This is an **achievement thema**

Serial Themas

- Many small themas can combine into **long patterns**
 - These patterns reflect personality over time
-

◆ 7. Need Integrate

Academic Definition

A **need integrate** is:

A stable connection between a need, a specific object/person, and a typical way of acting

Murray also called it a **thematic disposition**.

Key Terms Explained

- **Integrate**: Something well-organized and stable
 - **Instrumental acts**: Behaviors used to reach a goal
 - **Thematic disposition**: A habitual pattern of interaction
-

Plain English Explanation

Over time, people:

- Link certain **needs** with certain **people or objects**
- Learn specific **ways to act** to satisfy that need

Once formed, this pattern becomes automatic.

Everyday Example

- A child receives affection from mother → develops **affiliation need integrate**
- As an adult:
 - Feels need for closeness
 - Seeks caring people
 - Uses affectionate behavior

👉 The moment the need arises, the person **automatically seeks the matching object**.

◆ 8. Vector–Value Scheme

Academic Idea

Murray tried to map behavior using:

- **Vectors** → direction of behavior
 - **Values** → what the behavior serves
-

Definitions

Vectors (How behavior moves)

Examples:

- Acquisition (getting)
- Avoidance (escaping)
- Destruction (breaking)
- Expression (showing)
- Rejection (pushing away)

Values (What behavior is for)

Examples:

- Body (health)

- Affiliation (relationships)
 - Authority (power)
 - Knowledge (learning)
 - Aesthetic form (beauty)
 - Ideology (belief systems)
-

Matrix Idea

Imagine a table:

- Rows = vectors
- Columns = values

Each cell = **a specific behavior**

 Example:

- Vector: Acquisition
 - Value: Knowledge
→ Studying hard
-

Plain English Meaning

Personality at any moment is:

A complex mix of needs, pressures, directions, values, abilities, and experiences

9. Genetic–Maturational Determinants

Academic Definition

Murray believed personality development follows **genetically guided life stages**.

Key Terms

- **Genetic:** Influenced by heredity

- **Maturation:** Developmental changes with age
 - **Atrophy:** Gradual decline
-

Life Stages According to Murray

1. Early life

- New structures develop rapidly

2. Middle adulthood

- Reorganization of existing traits

3. Later life

- Fewer new traits, gradual decline
-

Plain English

We don't develop the same way at all ages.

Our **biology sets the timetable** for growth and decline.

10. Learning

Definition

Learning = discovering:

- What causes **pleasure**
 - What causes **distress**
-

Types of Pleasure/Pain Generators

- **Retrospective:** Memories
 - **Spective:** Present experiences
 - **Prospective:** Expectations of future events
-

Sources of Experience

- Inside the person (body, emotions)
 - Environment
 - Relationships
 - Conscience (moral judgment)
-

Example

- Feeling proud after honesty → conscience as pleasure generator
 - Fear of punishment → anticipated distress
-

◆ 11. Uniqueness

Murray's Belief

Every person and every behavior is **unique**.

Plain English

Even if two people:

- Have the same need
- Face the same situation

👉 They may react **very differently**

This is why Murray emphasized **individual case studies**.

◆ 12. Unconscious Processes

Academic Meaning

Much of behavior is influenced by **unconscious motives**.

Freudian Concepts Accepted by Murray

- **Repression**: Pushing unwanted thoughts out of awareness
- **Resistance**: Blocking awareness of uncomfortable truths

Plain English

People often:

- Don't know why they act
 - Avoid thinking about painful motives
-

13. Socialization Process

Definition

Personality develops through a **compromise** between:

- Personal impulses
 - Social and cultural demands
-

Key Concepts

- **Socialization:** Learning cultural rules
 - **Superego:** Internal moral authority
 - **Authority figures:** Parents, teachers
-

Role of Parents

- Reward good behavior
- Punish bad behavior
- Build affectionate relationships

Affection makes:

- Approval → powerful motivator
 - Disapproval → effective control
-

14. Research Approach (Very Important)

Key Features

1. Intensive Study of Individuals

- Small samples
- Deep understanding
- Focus on *why people differ*

2. Diagnostic Council

- Multiple observers
- Different perspectives
- Final synthesis discussion

3. Instruments of Measurement

- Thematic Apperception Test (TAT)
 - Projective techniques
 - Personality inventories
-

Projective Hypothesis

When people interpret **ambiguous stimuli**, they project their **inner motives**.

TAT Example

Show a picture → ask for a story

The story reveals:

- Needs
 - Conflicts
 - Values
-

McClelland and Social Motives

- Based on Murray's **achievement need**

- Used TAT to measure unconscious motives
 - Focused on achievement motivation
-

🌟 Final Big Picture

Henry Murray saw personality as:

- Dynamic, not fixed
 - Driven by needs and environment
 - Largely unconscious
 - Shaped by relationships
 - Unique for every individual
 - Best understood through **deep, rich, human study**
-

1. What is tension reduction in Murray's theory?

Answer

Tension reduction in Murray's theory refers to the process where a person feels internal discomfort (tension) when a psychological need arises, and then experiences relief or satisfaction when the need is fulfilled. Murray emphasized that people not only learn to reduce tension but may also create tension intentionally to later increase pleasure. This primarily applies to **effect needs**—needs satisfied by the outcome rather than the activity itself.

Explanation

- **Need:** An internal drive or psychological desire.
- **Tension:** The uncomfortable state caused by an unmet need.
- **Effect needs:** Needs whose satisfaction depends on achieving an outcome (e.g., hunger, achievement).

Murray's key addition: people sometimes **seek tension** deliberately because overcoming it later leads to **greater satisfaction**.

Example

- Studying for an important exam: stress (tension) → passing the exam → joy (tension reduction).
 - Watching a scary movie: fear builds → movie ends → relief and pleasure.
-

Tips

- Remember: **"Tension can be a tool, not just a problem."**
 - Focus on *effect needs* vs *process needs* (pleasure in activity itself).
-

2. What is a thema?

Answer

A **thema** is an interactive behavioral unit that represents the relationship between a person's need and an environmental pressure (press). It shows how a particular need is triggered by a situation and how the person responds. Murray emphasized that behavior is best understood in **dyadic units**—interactions between two people.

Explanation

- **Press:** Environmental force or situation affecting behavior.
- **Dyadic unit:** Interaction between two individuals.

Thema allows psychologists to represent behavior as a **story-like episode**, capturing both need activation and response.

Example

1. Snubbed by a friend → triggers **rejection need** → person ignores the friend (rejection thema).
 2. Fails an exam → triggers **achievement need** → person works harder (achievement thema).
-

Tips

- Always link **need + press + response**.
 - Thema = mini "behavioral story."
-

3. What is a need integrate?

Answer

A **need integrate** is a stable pattern where a person's need is connected to specific objects or people and associated behaviors. Once a need integrate forms, the person automatically seeks objects or people that satisfy that need in familiar ways.

Explanation

- **Integrate**: Well-organized, stable combination.
 - **Instrumental acts**: Behaviors used to satisfy needs.
 - **Thematic disposition**: Habitual behavioral pattern reflecting a need-object association.
-

Example

- Child receives affection from mother → develops **affiliation need integrate** → as an adult, seeks loving partners and shows caring behaviors automatically.
-

Tips

- Think: "**Need + object + behavior = integrated habit.**"
 - Key for predicting consistent behaviors.
-

4. What is the Vector-Value scheme?

Answer

Murray's **Vector–Value scheme** maps human behavior using **vectors** (directions of activity) and **values** (what behavior serves). It helps represent how people act toward goals and what those goals are.

Explanation

- **Vector:** Direction or type of behavior (e.g., acquisition, avoidance, expression).
 - **Value:** Goal or outcome of behavior (e.g., health, knowledge, affiliation).
 - A **matrix** of vectors and values allows psychologists to categorize behavior systematically.
-

Example

- Vector: Acquisition
 - Value: Knowledge
→ Studying hard for an exam
 - Vector: Expression
 - Value: Aesthetic form
→ Painting a beautiful picture
-

Tips

- Remember: "**Vector = how, Value = why.**"
 - Helps analyze personality as a **dynamic, multi-dimensional system**.
-

5. What are genetic–maturational determinants of personality?

Answer

Genetic–maturational determinants are biological and developmental factors that guide personality growth throughout life. Murray described life in **eras**:

1. Childhood to young adulthood → new structures emerge.
 2. Middle years → reorganize existing traits.
 3. Later life → reduced capacity for new growth, increased atrophy.
-

Explanation

- **Genetic:** Inherited factors.
 - **Maturational:** Developmental timing of growth.
 - Personality changes follow an **internal biological timetable**, but environmental interaction also shapes it.
-

Example

- Young adult: learns new skills rapidly.
 - Middle age: refines career skills.
 - Old age: slower learning, focuses on maintaining abilities.
-

Tips

- Life stages influence how **needs and behaviors manifest**.
 - Useful for understanding **age-related personality changes**.
-

6. How does Murray define learning?

Answer

Learning, for Murray, is discovering what brings **pleasure** or **distress**. These can be:

- **Retrospective:** memories
 - **Spective:** present experiences
 - **Prospective:** anticipated future outcomes
-

Explanation

- Generators of pleasure/distress can come from:
 - **Self** (body, emotions)
 - **Environment** (objects, situations)
 - **Interpersonal interactions** (other people)
 - **Conscience** (moral judgment)
-

Example

- Feeling proud for honesty → retrospective pleasure
 - Getting stuck in traffic → prospective distress
 - Expecting a promotion → prospective pleasure
-

Tips

- Link **learning** with **need satisfaction or tension reduction**.
 - Helps explain **why habits form**.
-

7. What is the importance of uniqueness in Murray's theory?

Answer

Murray emphasized that **every individual is unique**, and even each behavioral event is distinct. General patterns exist, but understanding a person requires **in-depth study of individual cases**.

Explanation

- Patterns can describe groups, but **each person may react differently** due to unique needs, history, and unconscious motives.
-

Example

Two students face the same exam:

- One studies, one procrastinates → same situation, different reactions → uniqueness principle.
-

Tips

- Never rely solely on averages; **case-specific analysis matters**.
-

8. How does Murray explain unconscious processes?

Answer

Murray acknowledged that many behaviors are influenced by **unconscious motives**, often defended against awareness through:

- **Repression**: pushing unwanted thoughts out
 - **Resistance**: avoiding awareness of painful tendencies
-

Explanation

- Not all motivations are conscious.
 - Unconscious processes can shape behavior in ways **people may not understand themselves**.
-

Example

- Fear of failure may unconsciously motivate over-preparation.
-

Tips

- Murray combines **Freudian ideas** with his need-press model.
 - Always ask: "Could this behavior have unconscious drivers?"
-

9. What is the socialization process according to Murray?

Answer

Socialization is the **process of adapting personal impulses to social and cultural demands**. Parents, culture, and institutions guide behavior using:

- Rewards and punishments
 - Development of a **superego** (internal moral guide)
-

Explanation

- Superego: internalized moral authority.
 - Effective socialization requires **affection + consistent approval/disapproval**.
-

Example

- Child learns sharing → receives praise → internalizes social norm → continues behavior even when alone.
-

Tips

- Socialization = **internalizing culture** through experience and parental guidance.
-

10. What were Murray's characteristic research methods?

Answer

Murray's research emphasized:

1. **Intensive study of few normal subjects** → deep understanding.
 2. **Diagnostic council** → multiple observers analyze same cases.
 3. **Innovative instruments** → projective tests like TAT to capture unconscious motives.
-

Explanation

- Focus on **rich, individual data** rather than broad averages.
 - Multiple observers improve **accuracy and objectivity**.
 - Instruments allow exploration of **needs, fantasies, and patterns**.
-

Example

- TAT (Thematic Apperception Test): ambiguous picture → subject tells a story → reveals hidden motives.
-

Tips

- Murray valued **quality over quantity** in research.
 - Deep study of individual life is more informative than surface-level group statistics.
-

11. How did Murray influence McClelland and the study of social motives?

Answer

Murray inspired **David McClelland** in studying **achievement motivation**, using TAT to measure unconscious needs. McClelland:

- Adopted Murray's **focus on unconscious motives**
 - Measured motives through **fantasy-based projective tests**
 - Studied the **achievement need** to understand human goal-directed behavior
-

Example

- A TAT story about someone overcoming obstacles reflects the storyteller's **achievement motive**.
-

Tips

- Remember: Murray → needs and TAT → McClelland → measurable social motives.
- Important for exams linking **personology with applied research**.

MCQs

1. True/False Statements

Q1: According to Murray, tension is only reduced when a need is satisfied; people never create tension intentionally.

- A) True
- B) False

Answer: B) False

Explanation: Murray believed that people may also **create tension intentionally** to increase later satisfaction, especially for effect needs (e.g., taking challenges or delaying gratification).

Q2: A thema is an interactive unit that represents the relationship between a need and a press (environmental pressure).

- A) True
- B) False

Answer: A) True

Explanation: A thema shows the **interaction between needs and situational pressures**, often in dyadic (two-person) terms.

Q3: Murray's concept of need integrate suggests that needs are always random and unrelated to objects or people in the environment.

- A) True
- B) False

Answer: B) False

Explanation: **Need integrate** represents a stable pattern where a need is connected with specific objects/people and behaviors.

Q4: Murray considered unconscious processes unimportant in explaining human behavior.

- A) True
- B) False

Answer: B) False

Explanation: Murray recognized the **role of unconscious determinants** and incorporated Freudian ideas like repression and resistance.

Q5: Socialization involves internalizing cultural and institutional demands and developing a superego.

- A) True
- B) False

Answer: A) True

Explanation: Socialization is the process by which individuals learn to balance personal impulses with social norms, with parents and culture guiding behavior.

2. Conceptual MCQs

Q6: Which of the following best represents an example of an **effect need**?

- A) Enjoying painting during the process
- B) Eating when hungry
- C) Reading for pleasure
- D) Dancing just for fun

Answer: B) Eating when hungry

Explanation: Effect needs are satisfied **by the outcome**, not the process. Hunger is reduced when food is eaten (tension reduction).

Q7: Which statement correctly describes **thema**?

- A) A single thought in the mind of the person
- B) An interaction showing how needs respond to environmental pressures
- C) Only a long-term personality trait
- D) A conscious moral decision

Answer: B) An interaction showing how needs respond to environmental pressures

Explanation: A thema is a **behavioral episode** linking a need and press, often in a dyadic situation.

Q8: The **Vector–Value scheme** in Murray's theory represents:

- A) Genetic determinants of personality
- B) Directions of behavior and what they serve
- C) Social norms internalization
- D) Unconscious motives only

Answer: B) Directions of behavior and what they serve

Explanation: **Vectors** = directions (e.g., acquisition, avoidance), **Values** = goals (e.g., knowledge, affiliation).

Q9: Which of the following is an example of **need integrate**?

- A) Feeling hungry randomly with no particular preference
- B) Seeking a caring friend whenever affiliation need arises
- C) Studying for an exam without caring about grades
- D) Randomly performing an action with no purpose

Answer: B) Seeking a caring friend whenever affiliation need arises

Explanation: A **need integrate** links a need (affiliation) to specific objects/people (caring friend) and predictable behaviors.

Q10: Which of the following statements is correct about **genetic–maturational determinants**?

- A) Personality development is entirely due to socialization
- B) Life stages influence the capacity for new traits and behaviors
- C) Genetics play no role in personality
- D) All personality traits remain stable across life

Answer: B) Life stages influence the capacity for new traits and behaviors

Explanation: Murray emphasized that personality develops in stages guided by **genetic and maturational processes**, with growth, consolidation, and decline phases.

3. Situational MCQs

Q11: Ahmed fails an important exam. According to Murray, which thema is likely to be activated if he works harder next time?

- A) Affiliation thema
- B) Achievement thema
- C) Rejection thema
- D) Avoidance thema

Answer: B) Achievement thema

Explanation: Failure press triggers the **achievement need**, resulting in behaviors like increased effort to succeed.

Q12: Sarah experiences stress while preparing for a big presentation but feels intense satisfaction afterward. Which concept explains this?

- A) Need integrate
- B) Tension reduction with intentional tension creation
- C) Genetic determinants
- D) Socialization

Answer: B) Tension reduction with intentional tension creation

Explanation: She intentionally faced **tension (stress)** for later **pleasure (success and satisfaction)**—classic Murray idea for effect needs.

Q13: A psychologist observes multiple students interacting in a classroom and wants to combine their perspectives to reduce bias. According to Murray, which method should be used?

- A) Random sampling
- B) Diagnostic council
- C) Single-observer rating
- D) Questionnaire only

Answer: B) Diagnostic council

Explanation: Murray's **diagnostic council** involves multiple observers studying the same subjects from different perspectives to improve accuracy.

Q14: During projective testing using TAT, a participant tells a story about someone overcoming challenges. This likely reflects:

- A) Their conscious plan only
- B) Their unconscious achievement motivation
- C) Social norms only
- D) Random imagination without meaning

Answer: B) Their unconscious achievement motivation

Explanation: TAT taps into **unconscious motives**, revealing themes such as achievement or affiliation, consistent with Murray's theory.

Q15 (Tricky): Which of the following is TRUE about Murray's research approach?

- A) Focused only on large-scale statistical analysis
- B) Studied normal individuals intensively, valuing qualitative observation
- C) Ignored unconscious motives
- D) Limited psychology to lab experiments only

Answer: B) Studied normal individuals intensively, valuing qualitative observation

Explanation: Murray emphasized **deep, qualitative study of individuals**, including normal subjects, using rich observational data and projective tests.

Cheat Sheet

1. Tension Reduction

Term	Definition	Keywords	Example	Memory Hook / Mnemonic
Tension Reduction	Relief experienced when a psychological need is satisfied	Need → Tension → Satisfaction	Studying for exam → stress → passing exam → relief	"Stress now, pleasure later"
Effect Need	Need where satisfaction depends on outcome	Hunger, Achievement	Hunger → eating	"Effect = outcome matters"
Process / Modal Need	Satisfaction is intrinsic to activity	Enjoyment during process	Dancing, Painting	"Process = pleasure while doing it"

Tip: Murray also emphasized **intentional tension creation** for greater later pleasure.

2. Thema

Term	Definition	Keywords	Example	Memory Hook
Thema	Interactive behavioral unit: need + press	Need, Press, Dyadic	Snubbed by friend → rejection → ignores back	"Behavioral story = Need + Situation"
Dyadic Unit	Interaction between two people	Two-person interaction	Teacher-student conflict	"Dyad = 2"

Term	Definition	Keywords	Example	Memory Hook
Press	Environmental influence triggering a need	Situation, Trigger	Failure at exam → Achievement need	"Press = environmental push"

Tip: Combine **multiple themas** → serial themas → shows longer personality patterns.

3. Need Integrate

Term	Definition	Keywords	Example	Mnemonic
Need Integrate	Stable link between a need, specific object/person, and typical behavior	Habitual, Predictable, Thematic disposition	Affiliation need → seeks caring friend → shows affection	"Need + Object + Action = Integrated Habit"

4. Vector–Value Scheme

Term	Definition	Keywords	Example	Memory Hook
Vector	Direction of behavior	Acquisition, Avoidance, Expression, Rejection, Destruction	Acquisition → Study for exam	"Vector = How I act"
Value	Goal or outcome served by behavior	Body, Knowledge, Authority, Affiliation, Ideology	Knowledge → studying → skill acquisition	"Value = Why I act"
Matrix	Combines vectors and values	Table of behaviors	Rows=Vectors, Columns=Values	"Behavior = Vector x Value"

5. Genetic–Maturational Determinants

Term	Definition	Keywords	Example	Mnemonic
Genetic–Maturational Determinants	Biological and developmental factors guiding personality over life	Life stages, Growth, Decline	Young adult learns new skills, Old age: slower learning	“Genes + Age = Personality Timeline”
Life Eras	Stages of development	Childhood/Youth, Middle Age, Old Age	Early learning → skill refinement → decline	“C-M-O” → Childhood, Middle, Old

6. Learning

Term	Definition	Keywords	Example	Tip
Learning	Discovering what generates pleasure/distress	Retrospective, Spective, Prospective	Pleasure: recalling childhood success, Stress: current traffic, Anticipation: future exam	Connect with Tension reduction & Need integrate
Hedonic / Anhedonic Generators	Sources of pleasure or distress	Body, Emotion, Environment, Conscience	Feeling proud, Pain of shame	“Hedonic = Happy, Anhedonic = Avoid pain”

7. Uniqueness

- Every individual and each behavior is **unique**.
- Even if two people have the same need and situation → reaction can differ.
- **Exam tip:** Always emphasize **individual case analysis**.

8. Unconscious Processes

Term	Definition	Example	Memory Hook
Unconscious Motives	Tendencies influencing behavior outside awareness	Fear of failure → overpreparation	"Hidden drives = invisible steering wheel"
Repression	Pushing thoughts out of awareness	Forgetting traumatic event	"Repress = push away"
Resistance	Avoiding awareness of uncomfortable truths	Avoids thinking about own mistakes	"Resist = block awareness"

9. Socialization Process

Term	Definition	Example	Tip
Socialization	Adapting personal impulses to societal and cultural norms	Child learns sharing → praised → internalizes norm	Parents are primary socializers
Superego	Internal moral authority guiding behavior	Avoids lying → feels guilt	Key agent in controlling impulses
Authority Figures	Guide socialization	Parents, Teachers	Reward/Punish + Affection → effective

10. Research Approach & Instruments

Term	Definition	Example	Mnemonic / Tip
Intensive Study	Deep, detailed study of few individuals	Single life history case study	"Quality over quantity"
Diagnostic Council	Multiple observers study same subject → discuss & synthesize	Multiple psychologists analyze one child	"Team observation = better accuracy"
Thematic Apperception Test (TAT)	Projective test to reveal unconscious motives	Show picture → tell story → reveals achievement/affiliation needs	"Project inner world onto ambiguous story"

11. Memory Mnemonics

- **Tension → Thema → Integrate → Vector → Genetic → Learning → Uniqueness → Unconscious → Socialization → Research (T-T-I-V-G-L-U-U-S-R)**
 - **Tip: Think “Every Personality Layer Explains Human Secrets”**
-

12. Quick Examples for Revision

Concept	Quick Example
Tension Reduction	Stress before exam → relief after passing
Thema	Snubbed by friend → rejection need → ignores back
Need Integrate	Affiliation → seeks caring friends automatically
Vector-Value	Acquisition (vector) x Knowledge (value) → studying
Genetic-Maturational	Young adult learns, old adult maintains skills
Learning	Retrospective: childhood success → pleasure
Uniqueness	Two students react differently to same exam
Unconscious	Fear of failure → overpreparation
Socialization	Child internalizes sharing behavior from praise
Research Approach	TAT → stories reveal unconscious needs
