10. Understanding where data come from?

1. All the members of the group /objects are generalized as _____.
   - Population
   - Defense
   - Decrease
   - Split
2. _____is the data drawn to test hypothesis.
   - Sample
3. A sample can be a _____.
   - Subject
   - Informant
   - Participant
   - All
4. the entire mass of observation means
   - the earth
   - continent
   - the universe
   - none
5. Sample contains the characteristics of a _____group.
   - General
   - Ordinary
   - Specific
   - All
6. Sampling paradigms, depending upon the _____of the study.
   - nature
   - purpose
   - both a&b
   - none
7. there are _____ sampling paradigms
   - one
   - two
   - three
   - five
8. Which paradigm requires in-depth analysis?
   - Representative sampling
   - Information rich
   - Both a &b
   - None
9. Which paradigm is replica of a larger group?
   - Representative sampling
   - Information rich
   - Both a &b
   - None

Maha Malik

10. _____sampling emphasis on the quality of information.
    - Quantitative
    - Qualitative
    - Both
    - None
11. Spanish children in Canada is an example of
    - Small sample
    - Large sample
    - Mini sample
    - None
12. Goal of sampling is to generalize the_____
    - Solutions
    - Discussions
    - Findings
    - None
13. US commission in 1974 and Belmont Report 1979 devised ethics for taking _____ as sample.
    - Humans
    - Animals
    - Schools
    - Dogs

11. Research planning and sampling

14. The _____need to select mandatory design components.
    - Author
    - Writer
    - Teacher
    - Researchers
15. Design components are based on_____.
    - class of enquiry
    - the model to be utilized
    - both a&b
    - none
16. Which of the following is/are component of research planning?
    - Sampling
    - Results
    - Data analysis
    - All
17. In sampling as an indispensable technique limitations of _____are considered.
    - Time
    - Energy
    - Money
    - All
18. _____ alternatively known as random sampling.
    - Probability

- Non- Probability
- Both a&b
- None

19. _____ sampling technique uses randomization to make sure that every element of the population gets an equal chance to be part of the selected sample.
    - Probability
    - Non- Probability
    - Both a&b
    - None
20. It does not rely on randomization.
    - Probability
    - Non- Probability
    - Both a&b
    - None
21. This type of sampling is also known as non-random sampling.
    - Probability
    - Non- Probability
    - Both a&b
    - None
22. A sample design is made up of _____ elements.
    - One
    - Two
    - Three
    - Four
23. The estimation process for calculating sample statistics is called the _____
    - Statistic
    - Calculator
    - Estimator
    - All
24. Which of the following is a sampling method?
    - simple random
    - stratified
    - cluster
    - all
25. The "best" sample design depends on survey _____
    - Objectives
    - Resources
    - Both a&b
    - None
26. A sample should be free from _____
    - Results
    - Discussion
    - Errors
    - Hypothesis

Maha Malik

12. Avoiding errors in sampling

27. _____is not always representative
    - Conclusion
    - Discussion
    - Sample
    - Moral
28. Sampling errors and errors of measurement can be avoided through _____.
    - solid sampling design
    - large sample
    - multiple contacts
    - all
29. Which type of error occurs in sampling?
    - Random
    - Systematic
    - Both a&b
    - None
30. By carefully choosing the sample _____can avoid sampling errors.
    - Style
    - Size
    - Both a&b
    - None
31. Larger the sample – the _____would be the standard error.
    - More
    - Smaller
    - Larger
    - Zero
32. Sample should cover _____of the population.
    - 10-20 %
    - 20-30 %
    - 30-40 %
    - 10-50 %
33. In descriptive research, _____ size samples are taken.
    - More
    - Smaller
    - Larger
    - Zero
34. _____validity refers to how well an experiment is done, especially whether it avoids confounding.
    - Internal
    - External
    - Both a&b
    - None
35. The _____ chance for confounding in a study, the higher its internal validity is.

Maha Malik

- More
- Extra
- Larger
- Less

36. Confounding means more than _____ possible independent variables acting at the same time.
    - One
    - Two
    - Three
    - Four
37. Extraneous variables affect the _____ validity because they are not controlled and have lower internal validity.
    - Internal
    - External
    - Both a&b
    - None
38. Credibility of sampling in Qualitative research methods include _____
    - Confounding
    - History
    - Attrition
    - All
39. _____ validity refers to how well data and theories from one setting apply to another.
    - Internal
    - External
    - Both a&b
    - None
40. _____ validity determines the degree of generalizability.
    - Internal
    - External
    - Both a&b
    - None

13. Classifying research designs

41. a specific type of research design that can be selected from the _____
    - Basic-Applied
    - Qualitative – quantitative
    - Exploratory – confirmatory
    - All
42. Mapping strategy through critical planning can help for a systematic research process.
    - True
    - False
43. Which of the following is/are continuum to classifying research designs?
    - Basic-Applied
    - Qualitative – quantitative
    - Exploratory – confirmatory

- All

44. _____ Research deals with generalization and formulation of theory about human behaviour.
    - Basic
    - Pure
    - Fundamental
    - All
45. Basic Research is completely theoretical, that focuses on_____.
    - basic principles
    - testing theories
    - both a&b
    - none
46. Highly theoretical and hypothetical are characteristics of _____ research?
    - Basic
    - Applied
    - Botha&b
    - None
47. _____ Research is very practical.
    - Basic
    - Applied
    - Botha&b
    - None
48. It is directed towards providing a solution to the specific practical problems and develops innovative technology.
    - Basic
    - Applied
    - Botha&b
    - None
49. The goal of _____ research is to add some knowledge to the existing one.
    - Basic
    - Applied
    - Botha&b
    - None
50. The goal of _____ research is to find out solution for the problem at hand.
    - Basic
    - Applied
    - Botha&b
    - None
51. Qualitative research is used to gain an in-depth understanding of human behaviour,
    - Experience
    - Attitudes
    - Intentions
    - All
52. Case study, grounded theory, ethnography, historical and phenomenology are the types of _____research.

Maha Malik

- Qualitative
- Quantitative
- Both a&b
- None

53. _____research is where researchers have a pretty good idea of what's going on.
    - Confirmatory
    - Exploratory
    - Informatory
    - None
54. The objective is to find out if the theory is supported by the facts..
    - Confirmatory
    - Exploratory
    - Informatory
    - None
55. _____designs are often used to establish an understanding of how best to proceed in studying an issue.
    - Confirmatory
    - Exploratory
    - Informatory
    - None
56. _____research doesn't test a hypothesis.
    - Confirmatory
    - Exploratory
    - Informatory
    - None

14. Questions and research designs

57. How many generic questions are asked in research design?
    - One
    - Two
    - Three
    - Four
58. _____ questions describe nature.
    - Why
    - What
    - Where
    - Who
59. Studies mainly based on what questions are primarily _____
    - Confirmatory
    - Exploratory
    - Informatory
    - None
60. What questions could be?
    - Basic-Applied

Maha Malik

- Qualitative – quantitative
- Both a&b
- None

61. Why questions could be?
    - Basic-Applied
    - Qualitative – quantitative
    - Both a&b
    - None
62. Research designs are based on your research _____.
    - Questions
    - Answers
    - Discussions
    - Conclusion

15. Q&RD: Extraneous factors to avoid

63. Any variable that you are not intentionally studying in your dissertation is a _____variable.
    - Internal
    - Extraneous
    - External
    - None
64. Society is a _____ type of change.
    - Physical
    - Natural
    - both a&b
    - None
65. Personality is a _____ type of change.
    - Physical
    - Natural
    - both a&b
    - None
66. Teaching Method is _____ variable.
    - Dependent
    - Independent
    - Both a&b
    - None
67. Control group may influence in _____ directions.
    - Two
    - Three
    - Four
    - Five
68. Result might spoil due to?
    - Instrumentation
    - The pretest effect
    - The posttest effect

Maha Malik

- All

16. Data collection procedures

69. Once research designs are decided, we need to select the _____ procedure.
    - Experimental
    - Data collection
    - Observational
    - None of the given
70. DGP stands for _____
    - Digital Collection Procedures
    - Data Collection Procedures
    - Data Conclusion Procedures
    - Data Collection Program
71. Judges are part of _____ DGP.
    - Instrumental
    - Observational
    - Both a&b
    - None
72. Questionnaires are part of _____ DGP.
    - Instrumental
    - Observational
    - Both a&b
    - None
73. Data gathering procedures based on _____
    - Collection
    - Observation
    - Conclusion
    - Instruments
74. Ambiguous rubrics is potential weakness of____
    - Partial Participants
    - Interviewer
    - Judges
    - Outside observers
75. Possible bias is potential weakness of____
    - Partial Participants
    - Interviewer
    - Judges
    - Outside observers
76. Handling data is potential weakness of____
    - Partial Participants
    - Interviewer
    - Judges
    - Outside observers
77. 100% feedback is potential strength of____

Maha Malik

- Partial Participants
- Interviewer
- Judges
- Outside observers

78. The _____ observe under highly structured conditions.
    - Partial Participants
    - Interviewer
    - Judges
    - Outside observers
79. Which of the following is a type of Questionnaires
    - Yes-No Qs
    - Agree-disagree Qs
    - Likert scale
    - All
80. First Certificate in English
    - FCIE
    - FCE
    - FE
    - NONE
81. CELT is an acronym of_____
    - Comprehensive English Language Test
    - Comprehensive English Learner Test
    - Certificate English Language Test
    - NONE
82. CDI is an acronym of_____
    - Communicative Disk Invention
    - Communicative Development Inventory
    - Compact Development Inventory
    - Communicative Development Invention

17. Qualities of a good data gathering procedures

83. When many people think of research, they imagine _____.
    - numbers
    - statistics
    - both a&b
    - none
84. validity relies heavily on reliability
    - true
    - false
85. A _____is simply a number that represents the amount of attribute.
    - Disjoint
    - Coefficient
    - Uncooperative
    - Uncoordinated

86. Which reliability coefficient has consistency over different times for same raters?
    - Intrarator
    - Interrator
    - Test-retest
    - None
87. Which of the following is a reliability coefficient used in research?
    - Intrarator
    - Interrator
    - Test-retest
    - All
88. Which of the following is a type of validity?
    - content
    - predictive
    - face
    - all
89. _____relates to a person having the necessary wherewithal or aptitude to succeed in some other endeavor.
    - Capacity to succeed
    - current characteristics
    - both a&b
    - none

18. Understanding research results

90. numerical data are more scientific than verbal data
    - true
    - false
91. _____data commonly appear as selections of excerpts, narrative vignettes, and quotations from interviews.
    - Verbal
    - Numerical
    - Both a&b
    - None
92. _____ data are often condensed into tables of frequencies, averages, and so on.
    - Verbal
    - Numerical
    - Both a&b
    - None
93. Presentation of _____ data and their analyses appear very much intertwined together in Results sections of research reports.
    - Verbal
    - Numerical
    - Both a&b
    - None
94. In data analysis spiral, the researcher _____

- Reflects
- makes notes
- reengages the data
- all of the given

95. Creswell (1998) provided _____ verification procedures that he extrapolated from a number of differing types of qualitative studies.
    - Six
    - Seven
    - Eight
    - Nine
96. Which of the following strategy researchers use to support the quality of the data?
    - Representativeness
    - Persistent observation
    - Researcher effects
    - All of the given
97. Not all things that appear to be related are directly related.
    - Spurious relationships
    - If–then tests
    - Rival explanations
    - None
98. the workhorse of qualitative data analysis.
    - Spurious relationships
    - If–then tests
    - Rival explanations
    - None
99. Eliminating competing explanations is a powerful way to add weight to a theoretical conclusion.
    - Spurious relationships
    - If–then tests
    - Rival explanations
    - None
100. This strategy is recognized by both qualitative and quantitative researchers as an excellent way to support hypotheses and theories.
    - Replicating findings
    - Informant feedback
    - Rich, thick description
    - External audits
101. This relates to the reactions that the informants have to the conclusions of the study.
    - Replicating findings
    - Informant feedback
    - Rich, thick description
    - External audits
102. This involves a detailed description of the participants, context, and all that goes on during the data-gathering and analysis stages.
    - Replicating findings

- Informant feedback
- Rich, thick description
- External audits

103. A seldom used but powerful method increase the credibility of the interpretations of a study is to hire an outsider to evaluate the study.
- Replicating findings
- Informant feedback
- Rich, thick description
- External audits

19. Understanding research results-II

104. Which of the following is a hurdle that people must cross when dealing with statistics?
- Math formulas
- Jargon statisticians
- Both a&b
- None

105. Quantities that are gathered directly from the entire population are referred to as parameters.
- True
- False

106. Which statistic to use to describe average?
- Mean
- Median
- Mode
- All

107. The mean is computed by _____up all the scores and dividing by the total number of scores.
- Multiplying
- Dividing
- Adding
- Subtracting

108. What statistic to use to indicate how much the data varies?
- standard deviation
- semi-interquartile range
- range
- ALL

109. Which of the following is related to the distance from the lowest to the highest scores in the distribution?
- standard deviation
- semi-interquartile range
- range
- ALL

110. Inferential statistics can be divided into _____general categories.
- nonparametric

- parametric
- both a&b
- none

20. Writing discussion of your research

111. Discussion and conclusion provide an overview of _____
- study
- findings
- relation of the findings with previous studies
- all

112. Ingredients for discussion and conclusion includes_____
- Future possibilities
- Relation of findings
- Attention to limitations
- All

113. Hypothesis is restated in?
- Conclusion
- Discussion
- Both a&b
- None

21. Writing your conclusion

114. Which of the following components are used in the Discussion/Conclusion section?
- An overview of the study
- Overview of the findings
- Relation of findings
- All

115. The purpose of the study is restated, the questions under investigation are summarized, and any propounded hypotheses are reiterated.
- An overview of the study
- Overview of the findings
- Relation of findings
- All

116. The researcher should show how the findings address the research question and/or support or fail to support any hypothesis being proposed.
- An overview of the study
- Overview of the findings
- Relation of findings
- All

117. The researcher should relate the findings of his or her study to previous research findings and theoretical thinking.
- An overview of the study
- Overview of the findings

- Relation of findings
- All

118. The researcher should evaluate his or her own study and point out any weaknesses and/or limitations regarding the study.
- Attention to limitations
- Possible applications
- Future possibilities
- None

119. The researcher should suggest in his or her conclusions how the results can be applied to practical situations.
- Attention to limitations
- Possible applications
- Future possibilities
- None

120. The researcher should suggest topics for future research.
- Attention to limitations
- Possible applications
- Future possibilities
- None

Answer key

1) Population
2) Sample
3) All
4) Universe
5) Specific
6) Both a&b
7) Two
8) Information rich
9) Representative sampling
10) Qualitative
11) Large
12) Findings
13) Humans
14) Researchers
15) Both a&b
