Lesson 8

Blended Language Learning

Topic: Blended Language Learning

What is blended learning?

Answer: Blended learning refers to the integration of face-to-face and online instructional modes in a complementary way to deliver a program of study.

How long has blended learning been practiced?

Answer: Blended learning has been practiced for a considerable time, particularly in distance learning courses, combining self-access content with face-to-face or telephone support.

How does the term 'blended learning' emphasize learning?

Answer: Blended learning emphasizes combining different learning environments and strategies to create a supportive and learner-centered learning environment.

How does technology contribute to blended learning today?

Answer: Today, technology combines various media within one online environment, facilitating learner-learner interaction, exploratory learning, and connectivity beyond the classroom.

According to Picciano (2009), what are the common elements in blended classes?

Answer: Blended classes integrate face-to-face and online activities in a planned, pedagogically valuable manner, with online activities replacing a portion of face-to-face time.

What is the key to a successful blended learning approach?

Answer: The key to success in blended learning is using the strengths of each medium appropriately, combining different learning environments in an integrated way to maximize learning effectiveness.

Why is adopting blended learning considered time-effective in language education?

Answer: Blended learning in language education is considered time-effective because it incorporates online mediums, providing additional opportunities for learners to practice and consolidate their language skills outside the classroom.

How does online learning empower learners in a blended approach?

Answer: Online learning, when used appropriately, empowers learners by providing rich interactive input, just-in-time support, fostering independence, and encouraging learner discovery.

What are the considerations before adopting a blended approach?

Teacher Training

Answer: Teacher training is crucial to develop programs that consider the strengths and weaknesses of both classroom and online environments.

Choosing an Appropriate Blend

Answer: The success of blended learning lies in choosing the right blend, which depends on learner needs, assessment requirements, and institutional constraints.

Costs

Answer: Costs involved in blended learning must be considered, with a focus on cost-effectiveness and efficient use of resources for student learning.

Attrition and Motivation

Answer: Student attrition and motivation are vital considerations, requiring a shift from teaching to learning and addressing both academic and non-academic factors.

Peer Support

Answer: Peer support is integral in blended learning, filling gaps in knowledge, encouraging idea sharing, and helping manage individual requests for help.

What is the essence of blended learning according to the conclusion?

Answer: Blended learning, when appropriately conceived and delivered, accommodates diverse learning needs, promotes independence, and supports both learners and teachers in providing an efficient and enjoyable learning experience.

Lesson 9

Designing Curriculum Around Technology

Topic 1: Integrating Technology

What is the purpose of integrating technology into the curriculum?

Technology integration serves to guide, expand, and enhance learning objectives.

How is curriculum integration with technology achieved?

By infusing technology as a tool to enhance learning in a content area or multidisciplinary setting.

When is effective integration of technology achieved?

When students can select technology tools to obtain, analyze, synthesize information, and make it an integral part of the classroom.

Topic 2: Curriculum Design

What is curriculum design?

Curriculum design is the purposeful, deliberate, and systematic organization of curriculum within a class or course.

Why is aligning learning goals across different stages important in curriculum design?

To ensure that learning goals are aligned and complement each other from one stage to the next.

What is the role of curriculum design in improving student learning?

The goal is to improve student learning by planning instruction and defining the learning within a specific program.

Topic 3: Role of the Teacher

How does technology impact teaching in the digital era?

Technology development makes it challenging, and teachers are expected to be more technologically savvy.

What is the analogy used to explain a teacher's familiarity with computers?

Similar to a driver not needing to understand how a car's engine works but knowing how to operate it.

According to Valmont and Wepner, what can computers not replace in education?

Computers cannot replace the unique abilities of teachers, including guiding students' academic growth.

Topic 4: Preparing for the Future

Why is integrating technology into the curriculum necessary for the future?

To stay updated, benefit from technological advances, and prepare students for the digital future.

What are the essential skills for success in the 21st century?

Collaboration, critical thinking, problem-solving, communication, and technological proficiency.

Topic 5: Benefits of Using Technology

How does technology improve student engagement in the classroom?

It provides different opportunities, such as gamification, virtual field trips, and online resources.

What role does technology play in improving knowledge retention?

Engagement through technology encourages better knowledge retention.

How does technology encourage collaboration among students?

By facilitating collaboration in online activities, projects, and interactions with students worldwide.

Topic 6: Effective Technology Tools

Name three effective technology tools for a successful curriculum.

Digital Books, Classroom Clickers, Interactive Whiteboards and Tablets.

What is a benefit of using Classroom Clickers in the classroom?

Promotes active learning by enabling real-time assessment of student answers.

How do Interactive Whiteboards contribute to learning?

They turn standard lessons into interactive activities, promoting student engagement and immediate feedback.

Topic 7: Outcomes

What are some outcomes of integrating technology into the curriculum?

More engaged students, simplified materials, increased motivation, better collaboration skills, and overall increased student achievement.

Topic 8: Conclusion

What is the overall impact of integrating technology into the curriculum?

It prepares teachers and students for a digital future, making the learning process collaborative, easier, and enjoyable.

Lesson 10

E-Assessment

Topic 1: Definition of E-Assessment

What is the definition of E-Assessment?

E-Assessment, also known as electronic assessment, involves the use of information technology in various forms of assessment such as educational, health, psychiatric, and psychological assessment.

Topic 2: Introduction to E-Assessment

Why is E-Assessment becoming more widely used by exam awarding bodies?

E-Assessment is increasingly used by exam awarding bodies, especially those with multiple or international study centers and those offering remote study courses.

What are the specific types of E-Assessment mentioned?

The specific types of E-Assessment include multiple-choice, online submission, peer-assessment, and forms such as formative, diagnostic, or summative assessments.

What are the practical considerations in transitioning from paper-based to electronic exam assessment in education?

Practical considerations include the availability of necessary IT hardware, ensuring security, and the logistical challenge of accommodating large numbers of students simultaneously.

Topic 3: Different Forms of E-Assessment

List some widely-used forms of E-Assessment.

a. Online tests, quizzes, and exams

b. E-submission and e-marking

c. Self- and peer-assessment

d. Student response systems

What is the process of e-submission in E-Assessment?

E-submission involves students submitting work online for storage, retrieval, marking, feedback, or review, which may include originality checking.

Topic 4: Self- and Peer-Assessment

What is self-assessment in E-Assessment, and why is it important?

Self-assessment involves learners critically reflecting on and recording their learning progress. It encourages reflection, helps focus feedback, and promotes autonomy in learners.

What are some reasons for using peer assessment in E-Assessment?

Peer assessment helps students practice constructive criticism, learn from each other, compare themselves with peers, engage with marking criteria, promote deep learning, and provide more efficient feedback for large groups.

Topic 5: Approaches for Providing Feedback in E-Assessment

Name some approaches for providing feedback in online assessment.

Provide digital feedback files, annotate work using comments, use online feedback forms (rubrics), create audio/video feedback, and annotate work directly in Blackboard or Turnitin.

Topic 6: Reasons for Using E-Assessment

What are some advantages of E-Assessment mentioned in the lesson?

Immediate feedback, accessibility for students in different locations and times, sophisticated reporting for refining exercises or identifying instructional needs, and the ability for students to assess and reassess their knowledge.

Lesson 11

Technologies for Teaching and Learning L2 Reading

Topic 1: Introduction to Technologies for Teaching and Learning L2 Reading

What are the challenges associated with online reading for L2 learners?

Online reading challenges for L2 learners include distractions, information overload, and the need for support due to linguistic limitations.

What are the objectives of this chapter?

The objectives are to inform L2 teachers, researchers, and software designers of theoretical grounding for applying technology to L2 reading, introduce various technology applications, discuss challenges, and provide thoughts on future directions.

Topic 2: L2 Reading Theories

Explain the structural perspective in L2 reading theories.

The structural perspective, also known as "bottom-up" or "outside-in," focuses on decoding written symbols into aural equivalents, emphasizing sub-skills for comprehension.

What is the cognitive view in reading theories?

The cognitive view, also called "top-down," highlights the interactive nature of reading, emphasizing background knowledge and schema development for comprehension.

Topic 3: SLA Theories and Applications of Technology to L2 Reading

How does cognitive theory contribute to technology applications in L2 reading?

Cognitive theory, focusing on noticing, working memory, and prior knowledge, provides theoretical bases for studying how online or multimedia reading scaffolds vocabulary learning and comprehension.

What is the sociocultural perspective's role in understanding technology use for L2 reading?

Sociocultural theories emphasize mediation of understanding through cultural tools and have been adopted to study technologies and L2 development, especially in social-networking-based learning.

Topic 4: Technologies in Use for Teaching and Learning of L2 Reading

What are the categories of technologies relevant to L2 reading?

The categories are self-developed and commercial courseware, online activities with individual tools and mobile devices, and CMC technologies (Chat, Moo, email).

How does Text-to-Speech (TTS) technology contribute to L2 reading?

TTS synthesizes speech from text and has been applied to assist struggling readers, enhance L2 reading, and create adaptable learning tools.

Topic 5: Challenges

What challenges do educators face in the technological age?

Educators face challenges such as distracted minds, information overload, keeping up with evolving technologies, and selecting appropriate tools for instruction.

How can educators lead distracted readers back to productive language learning?

Educators need to find creative and effective ways to lead distracted readers back to productive language learning by leveraging technology.

Topic 6: Future Directions

What are potential future trends in technology for L2 reading?

Future trends may include ubiquitous learning with mobile devices, adaptive learning, personalization, and technologies working towards autonomous learning.

How can Big Data technology be applied in the context of L2 reading?

Big Data technology can turn information overload into useful knowledge for designing learner-fit L2 reading materials and learning systems.

Lesson 12

Technology and L2 Writing

Topic 1: Introduction

How are new information and communication technologies impacting writing practices?

They are altering writing practices in important ways, making students navigate across various discourse situations.

Topic 2: Technologies for L2 Writing

What are the three general categories of technologies for L2 writing?

Web 2.0 applications, Automated Writing Evaluation (AWE) systems, and Corpus-Based Tools.

Sub-Topic 2.1: Web 2.0 Applications

Provide examples of Web 2.0 tools for L2 learners.

Lang-8 and Google Docs.

What does Lang-8 encourage among its users?

It encourages language learners to communicate with real audiences, and it facilitates collaborative writing activities.

Sub-Topic 2.2: Automated Writing Evaluation

Name some widely used AWE systems.

Criterion, Turnitin, and Writing Pal or W-Pal.

What features does Criterion provide in its feedback?

Criterion provides holistic scores, detailed trait feedback, resources like essay planning tools, and the Writer's Handbook.

Sub-Topic 2.3: Corpus-Based Tools

What is COCA, and how is it used in language instruction?

COCA is a freely available online corpus of English used to expose learners to authentic language use and improve their writing.

Topic 3: Empirical Research on L2 Writing Technologies

What has recent research shown about collaborative writing on platforms like Google Docs?

It benefits learners' writing development through peer editing and meaning-related revising.

Sub-Topic 3.1: L2 Writing with Web 2.0 Applications

How has Facebook been used in English writing classes, and what were the outcomes?

Facebook was used for peer assessment, leading to significant improvement in English writing.

Sub-Topic 3.2: L2 Writing and AWE

According to research, how can AWE feedback be more effective?

AWE feedback can be more effective when combined with teachers' feedback.

Sub-Topic 3.3: L2 Writing and Corpus-Based Technologies

What positive findings have empirical studies shown regarding corpus use for data-driven learning?

Corpus use has yielded positive learning outcomes, helping students correct grammatical errors.

Topic 4: Future Research and Development

What is learning analytics, and how can it benefit L2 writing?

Learning analytics involves collecting, measuring, and analyzing students' learning data, offering potential for real-time feedback tailored to individual learners.

Topic 5: Conclusion

What role do language teachers play in the integration of new technologies?

Teachers play a pivotal role in integrating new technologies in technology-enhanced classrooms, and learner training is crucial.

Lesson 13

Technologies for Teaching and Learning L2 Listening

Topic: Technologies for Teaching and Learning L2 Listening

What are affordances in the context of technology tools and applications?

Affordances are the perceived possibilities that users have for tools and applications, influenced by theory and practice toward second language learning goals.

Define Lyceum's interpretation of affordances in the online language learning environment.

Lyceum defines affordances as "possibilities as well as limitations" that impact its use.

What are the three possible perceptions of the affordance of a button for turning on and off captioning in videos?

(1) A shortcut to comprehension, (2) enrichment of the audio channel for noticing, and (3) a means to identify and capture new vocabulary items.

Topic: Technologies for Listening

Name some general-purpose digital devices supporting listening experiences.

Desktop and laptop computers, tablets, smartphones, DVD players, mp3 players, feature phones, streaming media players like Apple TV and Google Chromecast.

What are the critical networks for connecting digital devices to servers and other devices?

Wired, wireless, and mobile networks (e.g., 3G, 4G, LTE).

What is the primary issue for many users concerning mobile networks and Internet audio and video?

The cost, although it continues to drop, and many users can rely on free or inexpensive Wi-Fi.

Topic: Controls and Help Options

What are the four categories of help options according to Cardenas-Claros and Gruba's framework (CoDe)?

Operational, regulatory, compensatory, and explanatory.

Give examples of operational help options for language learners.

User manuals, help menus, training modules, and introductory-level tutorials for using hardware and software.

What is the role of regulatory help options for learners according to Cardenas-Claros and Gruba?

Prepare learners for a task, offer listening tips, directions for strategy use, and guidance on help options.

How can technology provide compensatory help options for language learners?

By modifying input, making input more salient, and supporting comprehension and acquisition.

Topic: Technology, Listening, and SLA Theory

How does Chapelle (2003) link technology to SLA theories in the context of listening?

She explores how the computer can serve as a stand-in for a human interlocutor, particularly from an interactionist perspective.

What is one important function of the computer within Chapelle's theoretical perspective for listening?

To provide enhanced input through increasing salience, input modification, or input simplification or elaboration.

Name some tools recommended for designing pedagogical material related to listening.

Exam time mind maps, Examtime Quizzes, eltpics photos, Author Stream slides, Present.Me, Blabberize, wordle.net, wordclouds.com, Infogram, Animoto, Piktochart, StudyBlue, Pixton, Storybird, Prezi.

How does Plass and Jones' multimedia learning model contribute to language learning in listening and reading?

It synthesizes an integrated model applicable to both listening and reading, linking verbal and pictorial input through dual coding.

Topic 1: Principles for Using Multimedia in Language Learning

What is the Multimedia Principle?

Answer: Students acquire language better from input enhanced by text and pictures than by text alone.

What is the Individual Differences Principle?

Answer: Students acquire language better when they have the choice of visual versus verbal annotations.

Explain the Advance Organizer Principle.

Answer: Advance organizers in reading and listening activities aid language acquisition, and those presented in visual and verbal modes are more effective than those presented only in the verbal mode.

Name three recommendations provided by Plass and Jones.

Answer: The recommendations include allowing learner control over the order, pace, and choice of materials, opportunities for producing comprehensible output, and vocabulary testing in the same mode as the annotations.

Topic 2: Vandergrift and Goh's Second Language Listening Model

What is the foundation of Vandergrift and Goh's second language listening model?

Answer: The model is based on comprehension, using Levelt's cognitive comprehension and production model.

What are the three types of knowledge in the metacognitive processes?

Answer: Personal knowledge, task knowledge, and strategy knowledge.

How do Vandergrift and Goh address listening comprehension goals in multimedia environments?

Answer: They review research on the use of visual media, support options, and captions, providing guidelines for teachers.

Topic 3: Technology-Mediated Listening

Name four areas relevant to technology and listening discussed in the section.

Answer: Captions and transcripts, multimedia, electronic glossaries and dictionaries, play speed control.

What did Winke, Gass, and Sydorenko find about the use of captions in their study?

Answer: Captioned videos were better than non-captioned for both comprehension and recognizing new vocabulary.

How does technology allow learners to control speech rate, according to Zhao (1997)?

Learners can speed up or slow down speech rate without affecting pitch using programs and media players.

Topic 4: Current Trends and Future Directions

What is a growing trend in language learning mentioned in the text?

The use of mobile devices, including smartphones, for language learning.

How is podcasting beneficial for learners, according to the text?

Answer: Podcasting allows recording of classes, episodes, assessing pronunciation, flexibility, playback, and synchronization of episodes.

What is content curation in the context of language learning?

Answer: It involves the collection of enriched media for the learner in terms of topic, language level, and other features.

What is the potential impact of smart watches and 3D immersive environments on language learning?

Answer: The text suggests uncertainty about the impact and encourages considering affordances in general.

Why is it important to expand research to understand the conditions of technology use in language learning?

Answer: The rapid pace of technological change requires understanding under what conditions features are more or less helpful for effective language learning.

Lesson 14

Technologies for Teaching and Learning L2 Speaking

Topic 1: Theoretical Frameworks

What are the key theoretical frameworks for teaching and learning L2 speaking?

Sociocultural theory

The Interactionist Hypothesis

Autonomy and student agency

Cognitive perspectives on speaking proficiency: Accuracy, complexity, and fluency

Explain Vygotsky's Zone of Proximal Development (ZPD) and its relevance to language learning.

The ZPD emphasizes collaborative learning, stating that individuals working together can produce more accurate or elaborate L2 utterances.

How does the Interactionist Hypothesis view L2 learning and the role of communication breakdowns?

Learners notice deficiencies and engage in negotiation of meaning during communication breakdowns, fostering second language acquisition.

Vuhelpers24 Sir Zahid

What does autonomy in language learning involve, and how is it different from self-instruction?

Autonomy involves students taking responsibility for their learning process, emphasizing empowerment and reflection, with the teacher as a guide.

According to cognitive perspectives, what are the three interrelated constructs of speaking proficiency?

Accuracy, complexity, and fluency.

Why is it challenging to define and measure accuracy, complexity, and fluency in L2 speaking proficiency?

These factors are subjective and depend on relative time measures, making them difficult to quantify.

Topic 2: CALL Pedagogical Frameworks for Speaking

What is Task-Based Instruction (TBI) in the context of CALL pedagogical frameworks for speaking?

TBI emphasizes language production through real-world activities, collaborations, and problem-solving, with an analytic post-phase for linguistic structure study.

How does task type contribute to the goal of increased accuracy, complexity, and fluency in speaking proficiency?

Not all tasks contribute equally; task type must be considered in CALL pedagogy for speaking.

Differentiate between Tutorial CALL and Social CALL (CMC).

Tutorial CALL involves self-directed speech practice, while Social CALL involves conversations with another person mediated through a computer.

How do Tutorial CALL programs facilitate individual language practice, and what is a drawback of this approach?

They allow memory storage and retrieval of L2 details, but the drawback is the lack of feedback.

What is the role of Automatic Speech Recognition (ASR) in Tutorial CALL, and why is it important?

ASR provides feedback on pronunciation and facilitates speaking practice, addressing the lack of feedback in traditional Tutorial CALL.

Name some commercially available ASR programs and their features.

Dragon Naturally Speaking, TeLL Me More, and Rosetta Stone, offering wave-analysis comparison and feedback on pronunciation.

Topic 1: Computer-assisted Pronunciation Training (CAPT)

What is CAPT, and why is it considered ideal for pronunciation training?

CAPT is computer-assisted pronunciation training designed for students to control their learning in a risk-free environment.

According to O'Brien (2006), why does effective communication require comprehensible pronunciation?

O'Brien argues that effective communication cannot take place without comprehensible pronunciation, emphasizing its importance.

What advantages does CAPT software offer, according to Eskenazi (1999)?

CAPT software provides more practice time, patience, flexibility, and no penalties for making errors.

How does Chun's research (1998, 2002) contribute to L2 intonation instruction through CALL software?

Chun's research focuses on providing students with clear feedback about L2 intonation through CALL software.

Topic 2: Asynchronous CALL Storytelling

How can students become multimedia storytellers using StoryKit?

Students can use StoryKit to create narratives with images, photos, text, and audio recordings.

What online tool, according to the lesson, allows collaboration on multimedia projects regardless of geographical locations?

VoiceThread.com allows collaboration on multimedia projects with participants from different geographical sites.

Mention some tools recommended for storytelling and their purposes.

Tools include Omeka for archiving, Timeline.js for interactive timelines, We Video for web-based story editing, and Canva for graphic design.

Topic 3: Digital Sound Tools: Unleashing Student Creativity

How did Arabic students at UC Berkeley demonstrate their speaking progress?

Arabic students at UC Berkeley demonstrated their speaking progress by publishing audio-enhanced finished products on YouTube.com.

Name some authentic video sources recommended for the ESL classroom.

University channels, major TV channels (BBC, ITV, Sky), news sites, YouTube (TEFLclips), TrueTube, Videojug, National Geographic, Real English, and others are recommended.

Topic 4: Computer Mediated Communication (CMC)

What does CMC stand for, and what is its main focus in CALL?

CMC stands for Computer-Mediated Communication, focusing on using the computer to mediate communication between people.

According to Kern (1995), what linguistic similarities exist between L2 oral speech patterns and asynchronous computer writing?

Kern observed linguistic similarities between L2 oral speech patterns and asynchronous computer writing, justifying the inclusion of SCMC textual exchanges in the context of L2 speaking.

How has SCMC evolved from textual exchanges to synchronous audio and video channels?

SCMC has evolved to include voice-over IP sound, synchronous audio, and synchronous video, combining asynchronous and synchronous channels.

Topic 5: Videoconferencing in CALL

What affordances do videoconferencing tools provide, according to Lafford and Lafford (2005)?

Videoconferencing tools provide certain affordances analyzed by Lafford and Lafford, promising a communicative experience most like face-to-face encounters.

How does the use of videoconferencing impact speaking proficiency, according to Guillen and Blake (2015)?

Guillen and Blake found that allowing students to post asynchronous video recordings through an LMS platform resulted in more complex sentences and better accuracy compared to synchronous video sessions.

Why is videoconferencing considered an alternative to traditional classroom speaking practice?

Videoconferencing provides an alternative to traditional classroom speaking practice, offering a more intensive speaking experience with constant turn-taking.

Topic 6: Chatbots in Academia

How have chatbots revolutionized academia?

Chatbots, such as Dialogflow, have revolutionized academia by providing platforms for training chatbots without coding skills, even allowing students to modify and build chatbots.

Name some chatbot applications mentioned in the lesson.

Babbel, Rosetta Stone, Duolingo, Memrise, Andy, Mondly, and others are mentioned as chatbot applications.

According to the conclusion, what challenges does SLA theory face in defining speaking proficiency?

SLA theory faces challenges in providing precise definitions for speaking proficiency, especially considering the impact of task choices on student outcomes.

What advice does the conclusion provide regarding the use of technology in language proficiency?

The conclusion advises continuous training in the use of CALL applications to promote language proficiency due to the rapidly changing nature of technology.

Lesson 15

Technology-Enhanced SLA Research

Topic 1: Defining SLA and SLA Research

What is SLA (Second Language Acquisition)?

SLA is the study of the human capacity to learn languages other than the first, occurring during late childhood, adolescence, or adulthood.

Distinguish between second and foreign language acquisition.

Second language acquisition occurs where the target language is spoken by the local community, while foreign language acquisition happens in settings where the target language is not spoken locally.

How has SLA evolved since the 1960s?

SLA has rapidly expanded with various theories and frameworks, resulting in an interdisciplinary field with around 60 different theories and models.

Mention some broad questions that SLA theories aim to address.

Questions include understanding learner behavior, stages of acquisition, characteristics of interlanguage, nature of errors, factors influencing SLA, mechanisms used by learners, fluency development, and variability in L2 attainment.

Topic 2: Cognitive Approaches to SLA

What are the two broad categories of cognitive approaches to SLA?

Traditional information processing and emergentism.

What do cognitivists believe is crucial for understanding fluent L2 development?

Understanding the processes that lead to the development of expertise.

According to emergentists, how is fluent language use developed?

It is exemplar-based, relying on a vast collection of memories of previously experienced utterances, rather than knowledge of abstract rules.

What are some constructs investigated by cognitive theory in SLA?

Constructs such as working memory, which can be assessed through the use of technology.

Topic 3: The Interaction Approach

What is the Interaction Approach (IA) based on?

The IA is based on Long's Interaction Hypothesis, developed in the early 1980s.

How does interaction contribute to language learning in the IA?

Through input, interaction with interlocutors, noticing linguistic differences, receiving corrective feedback, and modifying linguistic output during conversation.

What are some major constructs of the Interaction Approach?

Constructs include input, interaction, corrective feedback, attention, and output.

Vuhelper24 Sir Zahid

Give examples of phenomena investigated in the IA.

Negotiated interaction, recasts, and learner uptake.

Topic 4: Sociocultural Theory

What is Sociocultural Theory (SCT) based on?

SCT has its origins in the work of Russian psychologist Lev Vygotsky in the early 20th century.

How does SCT view language learning?

Learning is a social process facilitated by interaction, involving collaborative dialogue and scaffolding.

What is the Zone of Proximal Development (ZPD) according to SCT?

The ZPD is the distance between actual developmental level and potential development, emphasizing the importance of mediation in learning.

Topic 5: Defining SLA-Relevant Research in CALL

What does CALL stand for?

CALL stands for Computer-Assisted Language Learning.

How has the rapid development of computer technology influenced SLA research?

It has provided opportunities for investigating aspects of SLA theory not feasible in face-to-face environments.

How are SLA-relevant CALL studies distinguished from other studies?

They critically evaluate tools or apps in terms of their potential for facilitating L2 learning and have clear connections to SLA theoretical frameworks.

What criteria determine the SLA relevance of a CALL study?

(1) Is it a CALL study? (2) Is it grounded in an identifiable SLA theoretical framework? (3) Does it examine key assumptions relevant to the theoretical

framework? (4) Does it investigate the affordances of CALL environments for SLA?

Give an example of an SLA-relevant CALL study.

An examination of explicit recasts in an SCMC environment, arguing that written corrective recasts are more explicit due to the medium and message permanence.

Topic 1: Cognitive Approach

What theoretical frameworks do the three exemplary SLA-relevant CALL studies focus on?

Cognitive Approach, Interactionist Approach, Sociocultural Theory.

Which model of language production and theory of working memory did Payne and Whitney (2002) use in their study?

Levelt's model of language production and Working Memory theory (Baddeley, 1986).

In Payne and Whitney's study, what was the main question regarding the use of computer-mediated communication (CMC) for language learning?

Can SCMC help improve learners' L2 oral proficiency by developing the same cognitive mechanisms as spontaneous conversational speech?

What was the key question about text-based chat interaction in Payne and Whitney's study?

Can L2 oral proficiency be indirectly developed through chat room interaction in the target language?

What is the relationship between Levelt's model and working memory in the context of controlled processing in L2 production?

Controlled processing, associated with working memory, plays a central role in L2 lexical access and articulation.

How did Payne and Whitney argue that synchronous chat interaction could benefit language learning?

The slower rate of delivery in SCMC reduces processing demands, allowing learners to benefit from message permanence and increased planning time.

Topic 2: Interactionist Approach

What is the theoretical framework of Smith and Renaud's (2013) study on teacher-learner SCMC interaction?

Cognitive interactionist theoretical framework.

How did instructors integrate computer technology in Smith and Renaud's study?

Online conferences were used for discussing written assignments, providing an avenue for teacher-learner interaction.

What is the role of recasts in the interactionist approach, according to Smith and Renaud?

Recasts, a form of implicit negative feedback, focus on formal aspects of learners' output without significantly hindering communication.

How did Smith and Renaud measure learners' attention to corrective feedback in their study?

Eye-tracking technology was employed to compare learners' eye movements during online conferences with post-test results.

What potential benefits of text-based SCMC are mentioned in relation to language learning in the interactionist approach?

Increased participation, enhanced attention to linguistic form, and heightened quality of learner output.

Topic 3: Sociocultural Theory

Vuhelpers24 Sir Zahid

What theoretical framework does Rama et al.'s (2012) study on gaming in L2 settings adopt?

Sociocultural theory.

What was the main research question in Rama et al.'s study?

A.What affordances for second language development and socialization might online gaming environments offer?

How did participants engage with the MMOG World of Warcraft in Rama et al.'s study?

Participants were given a Spanish-language version of WoW to play at their discretion outside the classroom.

What data collection methods were used in Rama et al.'s study?

Journal entries, regular meetings, semi-structured interviews, and chat logs of text-based interaction during gaming sessions.

How does Rama et al. connect gaming sessions to language learning in the study?

Gaming sessions, although extracurricular, were connected to a specific Spanish course, making them part of the language learning experience.**

Topic 1: Theoretical Framework and SLA Concepts

What is the theoretical framework guiding the study?

Sociocultural theory (SCT) is identified as the guiding theoretical framework.

How does SCT view language learning?

SCT views language learning as emerging from interactions with others and the environment, mediated by language and tools.

What concept from Vygotsky's Zone of Proximal Development is emphasized in the study?

The study focuses on the interplay between a learner's capabilities and the learning environment, as emphasized in Vygotsky's ZPD.

Topic 2: Key Constructs and Hypotheses

What is the unit of analysis in the study?

The unit of analysis is the affordances for second language development and socialization emerging from learner interactions within the learning context.

What are the three new affordances of WoW identified in the study?

The study identifies three new affordances of WoW: creating safe learning spaces, emphasizing communicative competence, and promoting goal-directed collaborative action.

How is text-based CMC interaction related to reducing language learning anxiety?

Text-based CMC interaction, due to its mediated nature and written modality, is argued to reduce language learning anxiety.

Topic 3: Investigating CALL Environments

What is the role of guilds in the study, and how does it relate to CMC interaction research?

Guilds, providing more private and manageable chat interaction, align with the affordance of small group interaction identified in CMC interaction research.

How does the study suggest that MMOGs like WoW provide opportunities for language learners?

MMOGs offer opportunities for purposeful target language use, risk-taking with language, and extensive linguistic input, fostering language development.

Topic 4: Data Analysis and SLA-Relevant CALL Research

How does the study approach data analysis?

The data analysis involves an inductive process to identify language use patterns, followed by coding for specific examples of affordances for language learning.

What is learner process data, and why is it important in CALL research?

Learner process data involves capturing how learners engage with computer programs or interact with others, providing insights into SLA principles and extending understanding.

Topic 5: Multiple Modality Methods in Data Collection

How does the method of data collection affect outcomes in applied linguistics research?

The method of data collection, whether focusing on audio, video, or both, can significantly impact the interpretation of learner interactions in applied linguistics research.

Why is multimodal data collection important in CALL research?

Multimodal data collection, involving visual, audio, and textual data, provides a fuller picture of learner interactions and allows for a more comprehensive analysis.

Topic 6: Tracking Learner Behavior

How do researchers track learners' behavior in HCI?

Researchers track keystrokes, mouse clicks, and other actions through timestamps, using tools like screen capture programs and eye-tracking technology.

What is the role of eye tracking in CALL research?

Eye tracking helps capture learners' cognitive processing during tasks, revealing attention patterns, noticing events, and providing insights into cognitive and perceptual processes.

Topic 7: Types of Research in CALL and Language Technology

Name two linguistic varieties that can be studied using language technology.

Code-mixed and code-meshed language varieties can be studied using language technology.

How can text mining tools be applied in academia?

Text mining tools can be used for sentiment analysis, review analysis, and the exploration of linguistic patterns in various corpora.

Topic 8: Conclusion and Future Directions

What is one major challenge in SLA-relevant CALL research mentioned in the conclusion?

The challenge is balancing fast-paced technological development with exploring how technologies can be employed for principled language acquisition.

How does the convergence of SLA and CALL research contribute to developing CALL theory?

The convergence provides building blocks for developing a CALL theory, ensuring that claims from SLA theory hold in both CALL and face-to-face environments.
