Suppose you need to develop an application that will extract a small portion of the information from a very large XML document. Memory and speed may be constraints. Which of the following approach (method) you will use for development of your application.

Select the correct option

- Use DOM
- Use SAX
- Use a schema-based approach
- Extract the necessary information and process using XSLT.

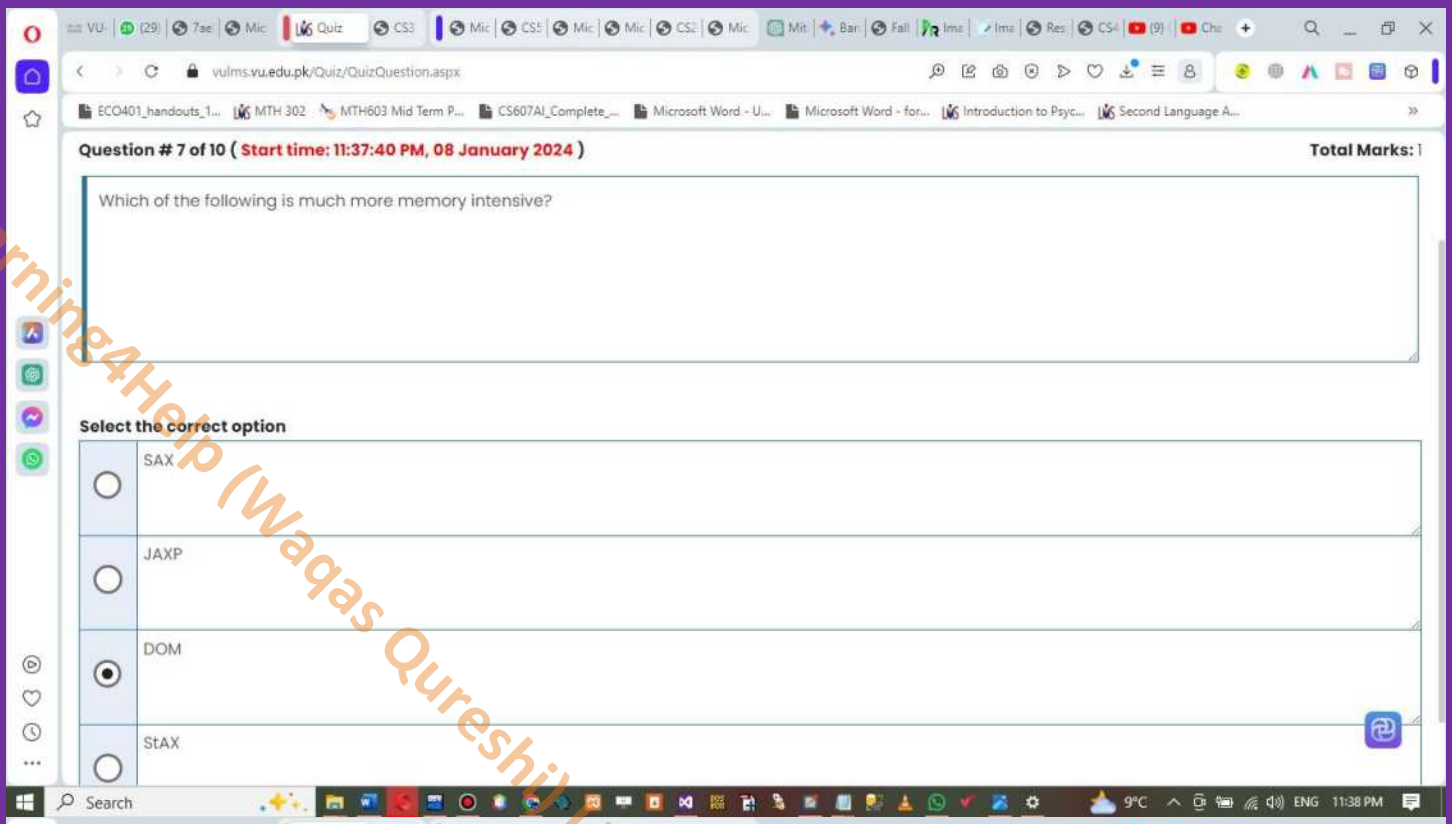

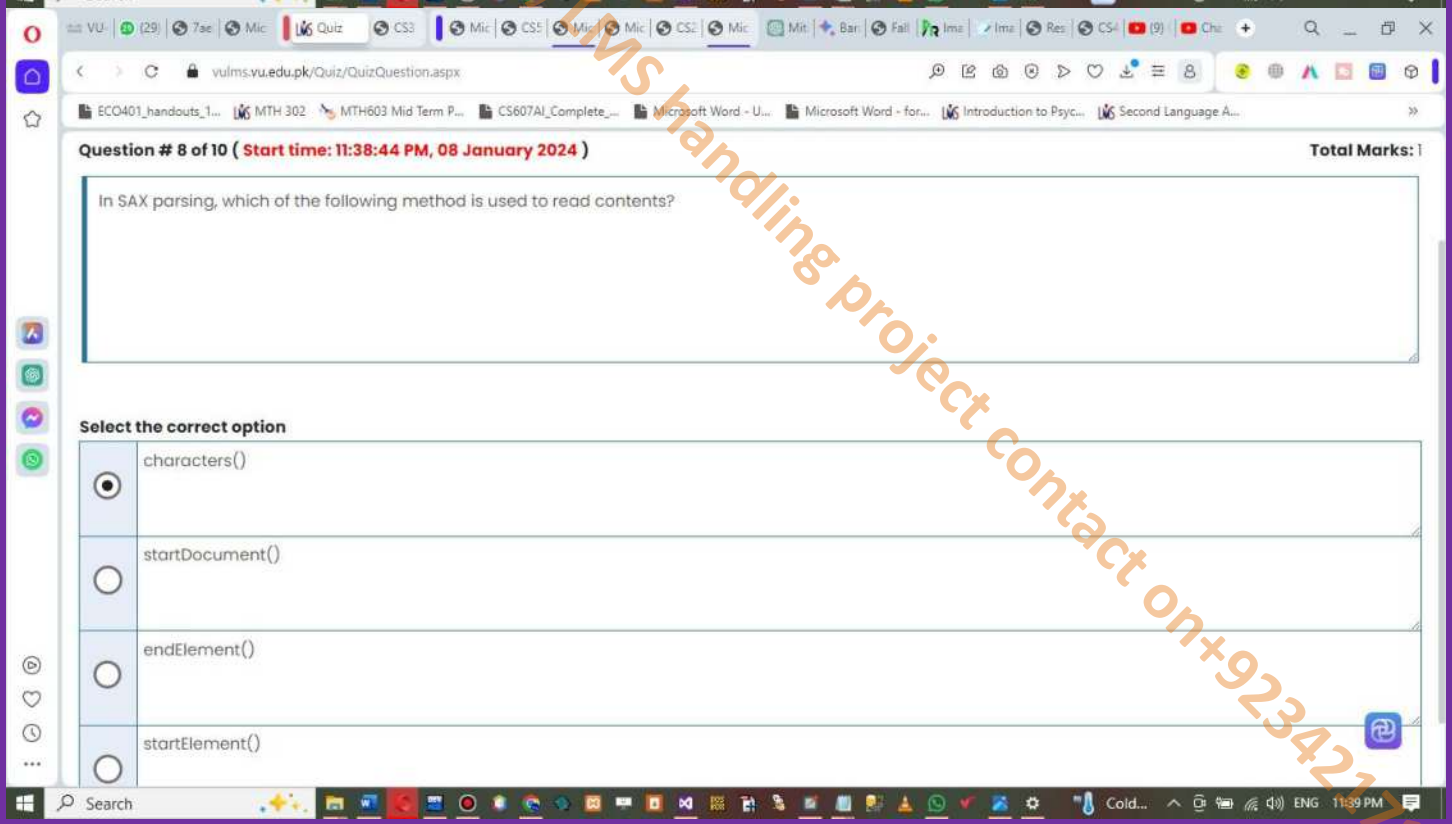

Which of the following method get called at the end of a document in SAX parsing?

Select the correct option

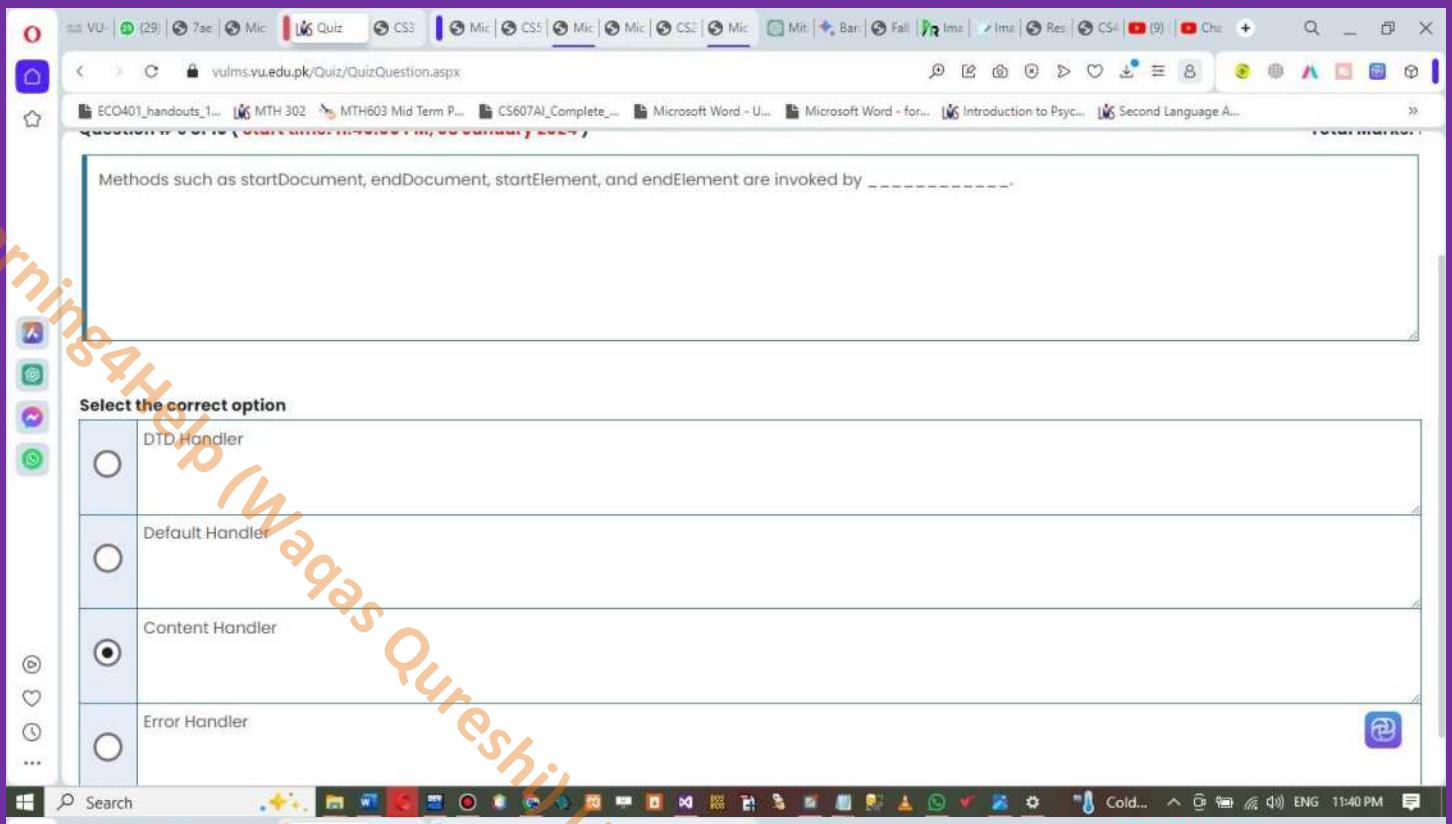

- None of the given options.
- documentEnded()
- finalizeDocument()
- endDocument()
