# Study Final Term Quiz-1 CS401 Computer Architecture And Assembly Language Programming Online

STUDY

PREPARATION

**Question: A divide-by-50 counter divides the input _____ signal to a 1 Hz signal.**

- [x] 10 Hz
- [ ] 50 Hz
- [ ] 100 Hz
- [ ] 500 Hz

**Question: Stack is an acronym for _____**

- [ ] FIFO memory
- [x] LIFO memory rep
- [ ] Flash Memory
- [ ] Bust Flash Memory

**Question: In _____ Q output of the last flip-flop of the shift register is connected to the data input of the first flip-flop of the shift register.**

- [ ] Moore machine

- [x] Johnson counter
- [ ] Ring counter

**Question: Stack is an acronym for _____.**

- [ ] FIFO Memory
- [x] LIFO Memory
- [ ] Flash Memory
- [ ] Bust Flash Memory

**Question: Stack is an acronym for_____**

- [ ] FIFO memory
- [x] LIFO memory rep
- [ ] Flash Memory
- [ ] Bust Flash Memory

**Question: A flip-flop is connected to +5 volts and it draws 5 mA of current during its operation, the power dissipation of the flip-flop is**

- [ ] 10 mW
- [x] 25 mW
- [ ] 64 mW
- [ ] 1024

**Question: The voltage gain of the Inverting Amplifier is given by the relation _____**

- [x] Vout / Vin = - Rf / Ri
- [ ] Vout / Rf = - Vin / Ri
- [ ] Rf / Vin = - Ri / Vout
- [ ] Rf / Vin = Ri / Vout

flip-flop _____

- [x] Doesn't have an invalid state
- [ ] Sets to clear when both J = 0 and K = 0
- [ ] It does not show transition on change in pulse
- [ ] It does not accept asynchronous inputs

**Question: A negative edge-triggered flip-flop changes its state when _____**

- [ ] Enable input (EN) is set
- [ ] Preset input (PRE) is set
- [ ] Low-to-high transition of clock
- [x] High-to-low transition of clock

**Question: 5-bit Johnson counter sequences through _____ states**

- [ ] 7
- [ ] 10
- [ ] 32
- [x] 25

**Question: The minimum time for which the input signal has to be maintained at the input of flip-flop is called _____ of the flip-flop.**

- [ ] Set-up time
- [x] Hold time rep
- [ ] Pulse Interval time
- [ ] Pulse Stability time (PST)

**Question: The three fundamental gates are _____.**

- [ ] AND, NAND, XOR

NOT, NOR, XOR

NOT, OR, AND

**Question: The basic building block for a logical circuit is _____**

A Flip-Flop

A Logical Gate

An Adder

None of given options

**Question: THE HOURS COUNTER IS IMPLEMENTED USING _____**

ONLY A SINGLE MOD-12 COUNTER IS REQUIRED

MOD-10 AND MOD-6 COUNTERS

MOD-10 AND MOD-2 COUNTERS

A SINGLE DECADE COUNTER AND A FLIP-FLOP rep

**Question: Here is an array of ten integers:**
**5 3 8 9 1 7 0 2 6 4**
**The array after the FIRST iteration of the large loop in a selection sort (sorting from smallest to largest).**

0 3 8 9 1 7 5 2 6 4

2 6 4 0 3 8 9 1 7 5

2 6 4 9 1 7 0 3 8 5

0 3 8 2 6 4 9 1 7 5

- truth table
- k-map
- state table
- state diagram rep

**Question: The 4-bit 2?s complement representation of "+5" is _____**

- 1010
- 1110
- 1011
- 101

**Question: Given the state diagram of an up/down counter, we can find _____**

- The next state of a given present state
- The previous state of a given present state
- Both the next and previous states of a given state
- The state diagram shows only the inputs/outputs of a given states

**Question: The OR gate performs Boolean _____.**

- multiplication
- subtraction
- division
- addition

**Question: The power dissipation, PD, of a logic gate is the product of the**

- dc supply voltage and the peak current Click here for detail
- dc supply voltage and the average supply current

- ac supply voltage and the average supply current

**Question: The _____ of a ROM is the time it takes for the data to appear at the Data**

- Output of the ROM chip after an address is applied at the address input lines
- Write Time
- Recycle Time
- Refresh Time

**Question: Caveman number system is Base _____ number system**

- 2
- ✓ 5
- 10
- 16

**Question: Compiler uses which one of the following to evaluate a mathematical equation,**

- Binary Tree
- Binary Search Tree
- ✓ Parse Tree
- AVL Tree

**Question: The diagram given below represents _____**

- Demorgans law
- Associative law
- Product of sum form
- ✓ Sum of product form rep

**Question: The alternate solution for a multiplexer and a register circuit is _____**

- Serial in / Parallel out shift register
- Parallel in / Parallel out shift register
- Serial in / Serial Out shift register

**Question: The PROM consists of a fixed non-programmable _____ Gate array configured as a decoder.**

- [x] AND
- [ ] OR
- [ ] NOT
- [ ] XOR

**Question: If there are 56 internal nodes in a binary tree then how many external nodes this binary tree will have?**

- [ ] 54
- [ ] 55
- [ ] 56
- [x] 57

**Question: The OR Gate performs a Boolean _____ function**

- [x] Addition rep
- [ ] Subtraction
- [ ] Multiplication
- [ ] Division

**Question: A divide-by-50 counter divides the input _____ signal to a 1 Hz signal.**

- [ ] 10 Hz
- [x] 50 Hz
- [ ] 100 Hz
- [ ] 500 Hz

**Question: In _____ outputs depend only on the combination of current state and inputs.**

- [x] Mealy machine
- [ ] Moore Machine
- [ ] State Reduction table
- [ ] State Assignment table

store the nibble 1100. What will be the 4-bit pattern after the second clock pulse? (Right-most bit first.)

- ○ 1100
- ○ 11
- ✓ 0
- ○ 1111

**Question: The decimal "17" in BCD will be represented as _____10001(right opt is not given)**

- ○ 11101
- ○ 11011
- ✓ 10111 (According to rule) rep
- ○ 11110

**Question: The operation of J-K flip-flop is similar to that of the SR flip-flop except that the J-K flip-flop _____**

- ✓ Doesn't have an invalid state rep
- ○ Sets to clear when both J = 0 and K = 0
- ○ It does not show transition on change in pulse
- ○ It does not accept asynchronous inputs

**Question: The alternate solution for a demultiplexer-register combination circuit is _____**

- ○ Parallel in / Serial out shift register
- ✓ Serial in / Parallel out shift register
- ○ Parallel in / Parallel out shift register
- ○ Serial in / Serial Out shift register

**Question: Which of the following statement is correct about find(x) operation:**

- A find(x) on element x is performed by returning the root of the tree containing x.
- A find(x) on element x is performed by returning the whole tree itself containing x.
- A find(x) on element x is performed by returning TRUE.

**Question: A transparent mode means _____**

- The changes in the data at the inputs of the latch are seen at the output
- [x] The changes in the data at the inputs of the latch are not seen at the output
- Propagation Delay is zero (Output is immediately changed when clock signal is applied)
- Input Hold time is zero (no need to maintain input after clock transition)

**Question: The 3-variable Karnaugh Map (K-Map) has _____ cells for min or max terms**

- 4
- [x] 8
- 12
- 16

**Question: The minimum time for which the input signal has to be maintained at the input of flip-flop is called _____ of the flip-flop.**

- Set-up time
- [x] Hold time rep
- Pulse Interval time
- Pulse Stability time (PST)

**Question: In _____ outputs depend only on the current state.**

- Mealy machine
- [x] Moore Machine
- State Reduction table

Question: in _____, all the columns in the same row are either read or written.

- ○ Sequential Access
- ○ MOS Access
- ✓ FAST Mode Page Access
- ○ None of given options

Question: Suppose currentNode refers to a node in a linked list (using the Node class with member variables called data and nextNode). What statement changes currentNode so that it refers to the next node?

- ○ currentNode ++;
- ○ currentNode = nextNode;
- ○ currentNode += nextNode;
- ✓ currentNode = currentNode->nextNode;

Question: The operation of J-K flip-flop is similar to that of the SR flip-flop except that the J-K flip-flop _____

- ✓ Doesn't have an invalid state rep
- ○ Sets to clear when both J = 0 and K = 0
- ○ It does not show transition on change in pulse
- ○ It does not accept asynchronous inputs

Question: The minimum time for which the input signal has to be maintained at the input of flip-flop is called _____ of the flip-flop.

- ✓ Set-up time

- ○ Pulse Interval time
- ○ Pulse Stability time (PST)

**Question: In a sequential circuit the next state is determined by _____ and _____**

- ○ State variable, current state
- ○ Current state, flip-flop output
- ✓ Current state and external input
- ○ Input and clock signal applied

**Question: Flip flops are also called _____**

- ○ Bi-stable dualvibrators
- ○ Bi-stable transformer
- ✓ Bi-stable multivibrators
- ○ Bi-stable singlevibrators

**Question: _____ is used to minimize the possible no. of states of a circuit.**

- ✓ State assignment
- ○ State reduction
- ○ Next state table
- ○ State diagram

**Question: The high density FLASH memory cell is implemented using _____**

- ○ 2 floating-gate MOS transistors
- ○ 4 floating-gate MOS transistors
- ○ 6 floating-gate MOS transistors

**Question: Which of the following statement is NOT correct about find operation:**

- ○ It is not a requirement that a find operation returns any specific name, just that finds on two elements return the same answer if and only if they are in the same set.
- ○ One idea might be to use a tree to represent each set, since each element in a tree has the same root, thus the root can be used to name the set.
- ○ Initially each set contains one element.
- ✓ Initially each set contains one element and it does not make sense to make a tree of one node only.

**Question: A complete binary tree of height 3 has between _____ nodes.**

○ 8 to 14 ○ 8 to 15 ✓ 8 to 16 ○ 8 to 17

**Question: THE GLITCHES DUE TO RACE CONDITION CAN BE AVOIDED BY USING A _____**

- ○ GATED FLIP-FLOPS
- ○ PULSE TRIGGERED FLIP-FLOPS
- ○ POSITIVE-EDGE TRIGGERED FLIP-FLOPS
- ✓ NEGATIVE-EDGE TRIGGERED FLIP-FLOPS rep

# Study Final Term Quiz-2 CS401 Computer Architecture And Assembly Language Programming Online

STUDY

PREPARATION

**Question: The minimum time for which the input signal has to be maintained at the input of flip-flop is called _____ of the flip-flop.**

- ○ Set-up time
- ✓ Hold time
- ○ Pulse Interval time
- ○ Pulse Stability time (PST)

**Question: Bi-stable devices remain in either of their _____ states unless the inputs force the device to switch its state**

- ○ Ten
- ○ Eight
- ○ Three
- ✓ Two

**Question: RCO Stands for _____**

- ○ Reconfiguration Counter Output
- ○ Reconfiguration Clock Output
- ○ Ripple Counter Output
- ✓ Ripple Clock Output

**Question: The maximum number of external nodes (leaves) for a binary tree of height H is _____**

✓ 2^H ○ 2H +1 ○ 2H -1 ○ 2H +2

**Question: The simplest and most commonly used Decoders are the _____ Decoders**

- ✓ n to 2n
- ○ (n-1) to 2n
- ○ (n-1) to (2n-1)
- ○ n to 2n-1

**Question: LUT is acronym for _____**

- ✓ Look Up Table
- ○ Local User Terminal
- ○ Least Upper Time Period
- ○ None of given options

**Question: Suppose we had a hash table whose hash function is "n % 12", if the number 35 is already in the hash table, which of the following numbers would cause a collision?**

○ 144 ✓ 145 ○ 143 ○ 148

**Question: The output of an AND gate is one when _____**

- [x] All of the inputs are one
- [ ] Any of the input is one
- [ ] Any of the input is zero
- [ ] All the inputs are zero

**Question: LUT is acronym for _____**

- [x] Look Up Table rep
- [ ] Local User Terminal
- [ ] Least Upper Time Period
- [ ] None of given options

**Question: By default the vector data items are initialized to _____**

- [x] 0
- [ ] 0
- [ ] 1
- [ ] null

**Question: In Private _____ only member functions and friend classes or functions of a derived class can convert pointer or reference of derived object to that of parent object**

- [ ] specialization
- [x] inheritance
- [ ] abstraction
- [ ] composition

**Question: Which operator can not be overloaded?**

- [ ] The relation operator ( >= )
- [ ] Assignment operator ( = )
- [ ] Script operator ( [] )

- [x] Conditional operator (? : )

**Question: Public methods of base class can _____ be accessed in its derived class**

- [x] directly
- [ ] inderectly
- [ ] simultaniously
- [ ] non of the given

**Question: The mechanism of selecting function at run time according to the nature of calling object is called,**

- [ ] late binding
- [ ] static binding
- [ ] virtual binding
- [x] None of the given options

**Question: _____ members are somewhere between public and private members. They are used in inheritance**

- [x] protected
- [ ] public
- [ ] private
- [ ] global

**Question: An STL container can not be used to,**

- [ ] hold objects of class employee.
- [ ] store elements in a way that makes them quickly accessible.
- [x] compile c++ programs.
- [ ] organize the way objects are stored in memory

**Question: What is a class?**

- ○ A class is a section of computer memory containing objects.
- ○ A class is a section of the hard disk reserved for object oriented programs
- ✓ A class is the part of an object that contains the variables.
- ○ A class is a description of a kind of object.

**Question: This pointer does not pass implicitly to _____ functions.**

- ✓ Static Member
- ○ Non-Static Member
- ○ Instance Number
- ○ None of the given

**Question: A template argument is preceded by the keyword _____.**

✓ vector ○ class ○ template ○ type*

**Question: When a subclass specifies an alternative definition for an attribute or method of its superclass, it is _____ the definition in the superclass.**

- ○ overload
- ✓ overriding
- ○ copy riding
- ○ none of given

**Question: Compiler performs _____ type checking to diagnose type errors,**

✓ Static ○ Dynamic ○ Bound ○ Unbound

**Question: When the base class and the derived class have a member function with the same name, you must be more specific which function you want to call (using _____).**

- ✓ scope resolution operator

- dot operator
- null operator
- Operator overloading

**Question: In case of multiple inheritance a derived class inherits,**

- Only the public member functions of its base classes
- Only the public data members of its base classes
- ✓ Both public data members and member functions of all its base classes
- Data members and member functions of any two base classes

**Question: Vectors contain contiguous elements stored as a[an] _____.**

✓ variable | array | function | datatype

**Question: Which of the following is the best approach if it is required to have more than one functions having exactly same functionality and implemented on different data types?**

- Templates
- ✓ Overloading
- Data hiding
- Encapsulation

**Question: The find() algorithm**

- finds matching sequences of elements in two containers.
- finds a container that matches a specified container.
- ✓ takes iterators as its first two arguments.
- takes container elements as its first two arguments.

**Question: A function call is resolved at run-time in_____**

- ○ non-virtual member function.
- ✓ virtual member function.
- ○ Both non-virtual member and virtual member function.
- ○ None of given

**Question: The sub-object's life is not dependent on the life of master class in _____.**

- ○ Composition
- ✓ Aggregation
- ○ Separation
- ○ non of the given

**Question: The main function of scope resolution operator (::) is,**

- ✓ To define an object
- ○ To define a data member
- ○ To link the definition of an identifier to its declaration
- ○ To make a class private

**Question: Identify the correct way of declaring an object of user defined template class A for char type members?**

- ○ A< char > obj;
- ○ <char>A obj;
- ✓ A obj<char>;

- ○ Obj A;

**Question: Which of the following is/are advantage[s] of generic programming?**

- ○ Reusability
- ○ Writability
- ○ Maintainability
- ✓ All of given

**Question: If we are create array of objects through new operator, then**

- ○ We can call overloaded constructor through new
- ○ We can't call overloaded constructor through new
- ○ We can call default constructor through new
- ✓ None of the given

**Question: Two important STL associative containers are _____ and _____.**

- ○ set,map
- ✓ sequence,mapping
- ○ setmet,multipule
- ○ sit,mat

**Question: Operator overloading is**

- ○ making C++ operators work with objects.
- ✓ giving C++ operators more than they can handle.
- ○ giving new meanings to existing Class members.

making new C++ operators

**Question: Which one of the following terms must relate to polymorphism?**

Static allocation

Static typing

Dynamic binding

Dynamic allocation

**Question: A normal C++ operator that acts in special ways on newly defined data types is said to be**

glorified.

encapsulated.

classified.

overloaded.

**Question: Inheritance is a way to**

organize data.

pass arguments to objects of classes.

add features to existing classes without rewriting them.

improve data-hiding and encapsulation.

**Question: Which of the following operator(s) take(s) one or no argument if overloaded?**

++ * % All of the given choices

**Question: Suppose obj1 and obj2 are two objects of a user defined class A. An + operator is overloaded to add obj1 and obj2 using the function call obj1+obj2.**

**Identify the correct function prototype against the given call?**

- ○ A operator + ( A &obj);
- ○ int + operator();
- ✓ int operator (plus) ();
- ○ A operator(A &obj3);

**Question: Which of these are examples of error handling techniques ?**

- ○ Abnormal Termination
- ○ Graceful Termination
- ○ Return the illegal
- ✓ all of the given

**Question: Each try block can have _____ no. of catch blocks.**

✓ 1 ○ 2 ○ 3 ○ As many as necessary.

**Question: A copy constructor is invoked when**

- ○ a function do not returns by value.
- ○ an argument is passed by value.
- ✓ a function returns by reference.
- ○ an argument is passed by reference.

**Question: _____ Operator will take only one operand.**

○ New ○ int ○ object ✓ none of the given

**Question: _____ is creating objects of one class inside another class.**

- ○ Association

- [x] Composition
- [ ] Aggregation
- [ ] Inheritance

**Question: When is a constructor called?**

- [ ] Each time the constructor identifier is used in a program statement
- [x] During the instantiation of a new object
- [ ] During the construction of a new class
- [ ] At the beginning of any program execution

**Question: The type that is used to declare a reference or pointer is called its _____**

- [ ] default type
- [ ] static type
- [ ] abstract type
- [x] reference type

**Question: In a de-queue, (chose the best option)**

- [ ] data can be quickly inserted or deleted at any arbitrary location.
- [ ] data can be inserted or deleted at any arbitrary location, but the process is relatively slow.
- [ ] data can not be quickly inserted or deleted at either end.
- [x] data can be inserted or deleted at either end, but the process is relatively slow.

**Question: In order to define a class template, the first line of definition must be:**

- [x] template <typename T>

- typename <template T>
- Template Class <ClassName>
- Class <Template T>

**Question: Multiple inheritance can be of type**

- Public
- Private
- Protected
- ✓ All of the given

**Question: _____ and _____ methods may not be declared abstract.**

- private,static
- ✓ private,public
- static,public
- none of given

# Study Final Term Quiz-3 CS401 Computer Architecture And Assembly Language Programming Online

STUDY

PREPARATION

**Question: The program counter holds the address of the next instruction to be _____**

- [x] executed.
- [ ] called
- [ ] deleted
- [ ] copy

**Question: There are three busses to communicate the processor and memory named as _____**

- [ ] address bus.,data bus and data bus.
- [ ] addressing bus.,data bus and data bus.
- [ ] address bus.,datamove bus and data bus.
- [x] address bus.,data bus and control bus..

**Question: The C of CX stands for Counter as there are certain instructions that work with an automatic count in the _____.**

- ○ DI register
- ○ BX register
- ✓ CX register
- ○ DX register

**Question: To access the arguments from the stack, the immediate idea that strikes is to _____ them off the stack.**

- ○ PUSH
- ✓ POP
- ○ CALL
- ○ Rrgister

**Question: In " mov ax, [num1+bx] " is _____ ADDRESSING**

- ○ OFFSET+ Indirect
- ○ Register + Direct
- ○ Indirect + Reference
- ✓ BASEd REGISTER + OFFSET

**Question: To play with string there are 5 instructions that are _____**

- ✓ STOS, LODS, CMPS, SCAS, and MOVS
- ○ MUL, DIV, ADD, ADC and MOVE
- ○ SSB, ADD, CMPS, ADC, and MOVS
- ○ None of the Given

**Question: _____is bit wise significant and accordingly each bit is named separately.**

- ○ AX
- ○ FS
- ○ IP
- ✓ Flags Register

**Question: When two 16bit numbers are added the answer can be 17 bits long, this extra bit that won't fit in the target register is placed in the _____where it can be used and tested**

- ✓ carry flag
- ○ Parity Flag
- ○ Auxiliary Carry
- ○ Zero Flag

**Question: mov instruction is related to the _____ *** **.**

- ○ Arithmetic and Logic Instructions
- ✓ Data Movement Instructions
- ○ Program Control Instructions
- ○ Special Instructions
